I. 2012 Standard Specifications and Standard Drawings

The 2012 State of Utah Standard Specifications for Road and Bridge Construction and Standard Drawings Books apply on this project as static Specification and Drawing Books as well as all other applicable specification and drawing changes.

Refer to Part XV for other project specific specifications.

II. List of Supplemental Drawings

This page will be periodically updated to list all approved drawings by date of issue. Include Supplemental Drawings that are applicable to the project at the end of the Plan Set. Update Plan Set Sheet 1A with a listing of the applicable Supplemental Drawings.

III. Materials Minimum Sampling and Testing Requirements

Follow the requirements of the Materials Minimum Sampling and Testing Requirements: <http://www.udot.utah.gov/go/mstr>

IV. Notice to Contractors

NOTICE TO CONTRACTORS

Sealed proposals will be received by the Utah Department of Transportation UDOT/DPS Building (4th Floor), 4501 South 2700 West, Salt Lake City, Utah. 84114-8220, until 2 o'clock p.m. Tuesday, December 20, 2016, and at that time the download process of bids from the Project Delivery System to UDOT will begin, with the public opening of bids scheduled at 2:30 for SR-248; Us-40 to Kamas, Preservation - Roadway of SR-248; MP 3.19 - 14.48 in SUMMIT, WASATCH Counties, the same being identified as Federal Aid Project No: F-0248(16)3.

Federal Regulations:

Davis-Bacon wages apply to this project and are made a part of these contract documents as required in the provisions of the Federal-Aid Highway Act of 1968. This contract is subject to all appropriate Federal Laws, including Title VI of the Civil Rights Act of 1964 and the Fair Labor Standards Act of 1938, (52 Stat. 1060).

SEE CERTIFIED PAYROLL SPECIAL REQUIREMENTS ATTACHMENT.

Project Location: SR-248; MP 3.19 - 14.48

The principal items of work are as follows (for all items of work see attachment):

SMA - 1/2 inch (PG 70-28)
Pavement Soft Spot Repair Type A (Contingency Item)
Cement Treated Asphalt Base (CTAB)

The project is to be completed: to be determined by competitive bid.

Other Requirements:

All project bidding information, including Specifications and Plans, can be viewed, downloaded, and printed from UDOT's Project Development Construction Bid Opening Information website, <http://eprpw.dot.utah.gov/bidopeninfo-upper.htm>. To bid on UDOT projects, bidders must use UDOT's Electronic Bid System (EBS). The EBS software is also available on this website.

Project information can also be reviewed at the main office in Salt Lake City, its Region offices, and its District offices in Price, Richfield, and Cedar City.

Project Plans cannot be downloaded or printed from the website unless your company is registered with UDOT. Go to UDOT's website to register. Registered companies may also obtain a **CD**, that contains the Specifications and Plans, from the main office, 4501 South 2700 West, Salt Lake City, (801) 965-4346, for a fee of \$20.00, plus tax and mail charge, if applicable, none of which will be refunded.

Prequalification of bidders is required. Prior to submitting a bid, the bidder must have on file with the Utah Department of Transportation a completed and approved contractor's application for prequalification. Department processing time is 10 working days from receipt of properly executed documentation. Qualified Health Insurance is required on this project. Insurance must be submitted with executed contracts. See Standard Specification 00515 - 1.11(A).

As required, a contractor's license must be obtained from the Utah Department of Commerce.

Qualified Health Insurance

A prime contractor is subject to qualified health insurance requirements if the prime contract is in the amount of \$2,000,000 or greater. A subcontractor is subject to qualified health insurance requirements if the subcontract is in the amount of \$1,000,000 or greater.

The Contractor shall demonstrate compliance with qualified health insurance requirements at the time of the execution of each initial prime contract. The Contractor shall demonstrate to the Department that the Contractor has and will maintain an offer of qualified health insurance coverage for the contractor's employees and the employees' dependents during the duration of the contract.

If a subcontractor of the Contractor is subject to qualified health insurance requirements, the Contractor shall place a requirement in the subcontract that the subcontractor shall obtain and maintain an offer of qualified health insurance coverage for the subcontractor's employees and the employees' dependents during the duration of the subcontract; and certify to the Department that the subcontractor has and will maintain an offer of qualified health insurance coverage for the subcontractor's employees and the employees' dependents during the duration of the prime contract.

Bid Bond

Each bidder must submit an electronic bid bond from an approved surety company using UDOT's Electronic Bid System (EBS); or in lieu thereof, cash, certified check, or cashier's check for not less than 5% of the total amount of the bid, made payable to the Utah Department of Transportation, showing evidence of good faith and a guarantee that if awarded the contract, the bidder will execute the contract and furnish the contract bonds as required.

Revised Date:

NOTICE TO CONTRACTORS

The right to reject any or all bids is reserved.

If you need an accommodation under the Americans with Disabilities Act, contact the Construction Division at (801) 965-4346. Please allow three working days.

Additional information may be secured at the office of the Utah Department of Transportation, (801) 965-4346.

After the evaluations and final determination of proposals is complete, the State shall award the contract as soon as practicable to the lowest responsive and responsible bidder, subject to Section 63G-6a-709(2).

All bidders should note the State of Utah Procurement Code requires the awarded contractor, for the duration of any contract awarded through this bidding process, to make available company contact information to the Department of Workforce Services in accordance with Utah Code 35A-2-203.

Contractor shall provide information regarding job vacancies to the State of Utah Department of Workforce Services, which may be posted on the Department of Workforce Services website. Posted information shall include the name and contact information for job vacancies. This information shall be provided to the State of Utah Department of Workforce Services for the duration of this Contract. These requirements do not preclude a Contractor from advertising job openings in other forums throughout the State of Utah.

Dated this 26th day of November, 2016.

UTAH DEPARTMENT OF TRANSPORTATION

Carlos M. Bracerias, P.E., Director

Revised September 8, 2015

NOTICE TO CONTRACTORS

Special Requirements Attachment **CERTIFIED PAYROLL**

Effective as of 11/02/2009, construction contractors awarded a Federal-aid construction project are required to submit weekly certified payrolls to the Utah Department of Transportation using the (UDOT) Electronic Certified Payroll Program available in the UDOT Project Development Business System (PDBS). Submittal may be accomplished using one of two available options;

Option 1

The Contractor creates and continues to use the company's existing payroll software program to import the weekly certified payroll.

If Option 1 is chosen:

The software program format utilized by the Contractor must be certified by UDOT prior to the first import submittal.

The Contractor is required to go over the errors that show on the Import Summary Report. The Contractor is required to fix the issues related to these errors. If the issues related to these errors cannot be resolved with the import feature, the Contractor will need to manually input the employee payrolls in which the errors pertain.

NOTE: The apprentice payroll information is not part of the import feature. Any apprentice payroll information needs to be manually entered.

Option 2

The Contractor can access and utilize the Contractor Module in PDBS and enter the certified payroll information and submit to the UDOT project office. After the first payroll submission, personal addresses and full social security numbers are not to be used. After the first payroll submission of an employee, contractors and subcontractors must use the last four digits of the employee's social security number as an identifier.

Effective as of September 8, 2015, a \$50 disincentive will be charged for each payroll not entered into the UDOT Electronic Certified Payroll Program within 7 days of the Payroll Date. This disincentive applies to both the General Contractor and all Subcontractors where Davis Bacon Wages apply.

For questions contact the Civil Rights Office.

Note: Item numbers ending with "" or "P" identify a change to the Standard Specification, Supplemental Specifications or Measurement and payment. Read all related documents carefully.

Utah Department of Transportation Bidder's Schedule

Bid Opening Date: 12/20/2016
Project Number: F-0248(16)3
PIN Description: SR-248; Us-40 to Kamas
Concept: Preservation - Roadway
Location: SR-248; MP 3.19 - 14.48

Region: REGION 2
County: SUMMIT

Funding: FEDERAL

Bid Items Version#: 1

DBE Goal:

#	Item	Description	Quantity	Unit
10 - ROADWAY				
42	028440080	Precast Concrete Barrier - 32 Inch (New Jersey Shape), Sloped End Section (for speeds < 40 MPH)	1	each
43	029610030	Rotomilling - 2 Inch	291456	square yard
44	029610040	Rotomilling - 3 Inch	14573	square yard
20 - STRUCTURES				
Description: C-751R				
45	03372001*	Thin Bonded Polymer Overlay, Type I	4750	square foot
46	03392001*	Parapet Sealing	230	foot
47	03934001*	Structural Pothole Patching	100	square foot
40 - SIGNING				
48	028910060	Sign Type A-1, 30 inch X 30 inch	1	each
49	028910065	Sign Type A-1, 36 inch X 36 inch	4	each
50	02891006P	Sign Type A-1, 30 inch X 18 inch	4	each
51	02891007P	Sign Type A-1, 48 inch X 24 inch	2	each
52	028910270	Remove Sign Less Than 20 Square Feet	32	each
53	028910285	Relocate Sign Less Than 20 Square Feet	6	each
54	028910320	Slipbase Sign Base (B3)	27	each
55	028910375	Sign Post P5	27	each
50 - SIGNALS				
56	02892003P	State Furnished Pedestrian Path System Labor	1	lump sum
57	02892004P	State Furnished Radar Detection Labor	1	lump sum
180 - TIME AND/OR LANE RENTAL				
58	00221000*	Contract Time	Date Range: 100 - 120	0 day

Note: Item numbers ending with "" or "P" identify a change to the Standard Specification, Supplemental Specifications or Measurement and payment. Read all related documents carefully.

VI. Measurement and Payment

Measurement and Payment

Project # F-0248(16)3

11/15/2016

Item #	Bid Item Number	Bid Item Name	UOM
1	00830001U	On the Job Training	hour
<p>Training Commitments listed in the Table of Contents for Federal projects, XI 5 http://www.udot.utah.gov/main/f?p=100:pg:::1:T,V:1940</p>			
2	012850010	Mobilization	lump sum
		Amount Paid	When Paid
		<p>The lesser of 25% of Mobilization or 2.5% of contract The lesser of 50% of Mobilization or 5% of contract The lesser of 75% of Mobilization or 7.5% of contract The lesser of 100% of Mobilization or 10% of contract Amount bid in excess of 10% of contract price.</p>	<p>With first estimate With estimate following completion of 5% of contract With estimate following completion of 10% of contract With estimate following completion of 20% of contract Project Acceptance-Final</p>
<p>Includes all costs associated with Railroad Flagging, inspection, and cleanup crew according to Section 00725.</p>			
3	01315001*	Public Information Services	lump sum
4	01554000*	Traffic Control	lump sum
<p>25% of the bid item amount paid with first estimate. Remaining portion of bid item paid as a percentage of the contract completed with each subsequent estimate.</p>			
5	01557001*	Maintenance of Traffic	lump sum
<p>Amount Paid 25% of the bid item amount with first estimate. Remaining portion of bid item paid as a percentage of the contract completed with each subsequent estimate.</p> <p>Includes furnishing and moving portable VMS signs.</p>			
6	018920010	Reconstruct Catch Basin	each
7	018920050	Reconstruct Manhole	each
8	020560020	Granular Borrow	ton
<p>In final position</p>			
9	02221002P	Remove Delineators	each
<p>Includes the removal and disposal of existing delineators.</p>			
10	022210125	Remove Concrete Curb and Gutter	foot
11	02221016P	Remove Asphalt Pavement (Plan Quantity)	square yard
<p>Regardless of the depth A. Does not include discontinued roads within the limits of the new roadbed or roads that are disturbed in performing other items of work. B. Exclude from measurement and payment under "Roadway Excavation."</p>			
12	022210170	Remove Precast Concrete Barrier	foot
13	02316002P	Roadway Excavation (Plan Quantity)	cubic yard
<p>Includes all labor and equipment to excavate roadway as shown in the Project Plans and Specifications. Item includes excavation, clearing, grubbing, pavement cutting, haul off and disposal. Excavated material to be used and placed as embankment if suitable, determined by the Engineer.</p>			
14	027210010	Untreated Base Course	ton
15	02721001P	Shouldering (CTAB Area)	foot
<p>Includes all work incidental to placement of shoulder dressing (UTBC Type III placement) as directed by the Engineer including: hauling, placement, grading, water, and compaction. Estimated quantities are based upon preliminary field review for bidding purposes only. Shoulder as directed by the Engineer. Shouldering quantities may be reduced, deleted, or increased over the bid quantities from the contract. The price of the actual quantity will be paid at the contract unit price if any of these situations occur. Assume a prism of 4 inch depth by 5 foot width.</p>			
16	02721002P	Minor Shouldering (Contingency)	foot
<p>Includes all work incidental to placement of shoulder dressing (UTBC Type III placement) as directed by the Engineer including: hauling, placement, grading, water, and compaction. Estimated quantities are based upon preliminary field review for bidding purposes only. Shoulder as directed by the Engineer. Shouldering quantities may be reduced, deleted, or increased over the bid quantities from the contract. The price of the actual quantity will be paid at the contract unit price if any of these situations occur. Assume a prism of 2 inch depth by 4 foot width. The placement of this item will be determined by the Engineer.</p>			

Measurement and Payment

Project # F-0248(16)3

11/15/2016

Item #	Bid Item Number	Bid Item Name	UOM
17	02727001*	Cement Treated Asphalt Base (CTAB)	square yard
		Includes rotomilling, profile milling, grading, prime coat, pulverization, processing, import and/or export of pulverized asphalt and all work necessary according to specification 02727S. Cement paid separately.	
18	02727002*	Portland Cement	ton
		Includes dust control and watering.	
19	02737003*	Pavement Soft Spot Repair Type A (Contingency Item)	square yard
		Includes saw cutting, removal and disposal of existing asphalt pavement, compaction of base and installation of new HMA pavement. Installation includes all labor, equipment, and materials necessary to repair pavement. Estimated plan quantities are based on preliminary field review for bidding purposes only. Repair the actual quantities determined by the Engineer. Pavement Soft Spot Repair may be reduced, deleted, or increased over the bid quantities from the contract. The price of the actual quantity will be paid at the contract unit price if any of these situations occur.	
20	02737004*	Pavement Soft Spot Repair Type B (Contingency Item)	square yard
		Includes saw cutting, removal and disposal of existing asphalt pavement, compaction of existing base, geotextile fabric, UTBC and installation of new HMA pavement. Installation includes all labor, equipment, and materials necessary to repair pavement. Estimated plan quantities are based on preliminary field review for bidding purposes only. Repair the actual quantities determined by the Engineer. Pavement Soft Spot Repair may be reduced, deleted, or increased over the bid quantities from the contract. The price of the actual quantity will be paid at the contract unit price if any of these situations occur.	
21	02741001*	HMA - 1/2 inch (PG 64-34)	ton
		Includes aggregates, asphalt binder, hydrated lime, and other additives, etc. Tack coat is paid separately.	
22	02741002*	SMA - 1/2 inch (PG 70-28)	ton
		Includes aggregates, asphalt binder, hydrated lime, mineral or cellulose fiber, mineral filler and other additives.	
23	02748001P	Prime Coat	ton
24	02748006P	Emulsified Asphalt CQS-1H	ton
25	027610023	Longitudinal Rumble Strip - Asphalt	foot
		Gaps are not paid for. Includes CSS-1h for flush coat.	
26	027650050	Pavement Marking Paint	gallon
27	027680105	Pavement Message (Preformed Thermoplastic)	each
		Measurement A. Letter = one message B. Arrow = one message C. Multi-headed arrow = one message per arrow D. School crossbars = one message per 24 inch x 10 ft bar E. Crosswalk = two message per lane and two messages per shoulder F. Stop Bar = one message per lane and one message per shoulder G. Railroad crossing markings = seven messages per lane 1. R = one message each (two required) 2. X = two messages 3. Transverse Bar = one message each (two required) 4. Stop Bar = one message H. Include all costs for the Manufacturer's Service Representative and other technical assistance in the contract unit price.	
28	027710059	Perpendicular/Parallel Pedestrian Access Ramp	each
		Includes all labor, equipment, untreated base course, and materials necessary for a complete pedestrian access ramp according to GW Series Standard Drawings. The curb cut will remain part of the curb and gutter installation.	
29	02771011P	Reconstruct Pedestrian Access Ramp	each
		Includes all labor, equipment, materials, disposal, untreated base course, and incidental work to remove and construct a pedestrian access ramp according to GW Series Standard Drawings. Incidental work includes the removal and replacement of up to 100 sq ft of adjacent sidewalk, up to 20 sq ft of landscaping, and repair of irrigation and asphalt damaged to construct pedestrian access ramp.	
30	027760015	Concrete Sidewalk	square yard
		Includes excavation and untreated base course.	
31	027760025	Concrete Curb and Gutter Type B1	foot

Measurement and Payment

Project # F-0248(16)3

11/15/2016

Item #	Bid Item Number	Bid Item Name	UOM
		Measured along the roadway face. Includes excavation and untreated base course.	
32	02826001*	Snow Fence	foot
		Measured parallel to the ground along the fence, includes all material required for complete snow fence installation.	
33	028410030	W-Beam Guardrail Transition Element	each
		Includes guardrail with posts, blocks, hardware, curb section, and barrier reflectors. Use same post type as designated in project typical installation.	
34	028410086	W-Beam Guardrail 72 inch Wood Post	foot
		Includes standard W-beam guardrail with posts, blocks, hardware, and barrier reflectors.	
35	028410092	W-Beam Guardrail Anchor Type II	each
		Includes standard 12 foot 6 inch W-beam radius guardrail with 3 shortened breakaway posts, 3 foundation tubes, blocks, cable, and hardware.	
36	02842002P	Delineator Type II	each
37	02842003P	Delineator - Culvert Marker	each
38	028430035	End Treatment Type G	each
		Includes all crash cushion markings, marker posts and plates, object markers, and all mounting hardware.	
39	028430040	End Treatment Type H	each
		Includes all crash cushion markings, marker posts and plates, object markers, and all mounting hardware.	
40	028440010	Precast Concrete Barrier - 32 Inch (New Jersey Shape)	foot
		Includes connection pins, stabilization pins, and barrier reflectors. Includes asphalt impregnated polyurethane foam when required. See BA Series, Standard Drawings.	
41	02844001P	Relocate and Reset Precast Concrete Barrier - 32 Inch (New Jersey Shape)	foot
		Includes all material, labor, and equipment necessary to remove the existing Precast Concrete Barrier, connection pins, and stabilization pins. Salvage all intact and reusable Barrier for reuse. Reset the Precast Concrete Barrier in it's existing location, install new connection pins, stabilization pins, and barrier reflectors. Contractor to replace barrier with new Precast Concrete Barrier - 32 Inch (New Jersey Shape) if damaged during removal.	
42	028440080	Precast Concrete Barrier - 32 Inch (New Jersey Shape), Sloped End Section (for speeds < 40 MPH)	each
		Includes connection pins, and barrier reflectors. Includes asphalt impregnated polyurethane foam when required. See BA Series, Standard Drawings.	
43	029610030	Rotomilling - 2 Inch	square yard
		Calculated from length multiplied by the average finished width of rotomilled surface	
44	029610040	Rotomilling - 3 Inch	square yard
		Calculated from length multiplied by the average finished width of rotomilled surface	
45	03372001*	Thin Bonded Polymer Overlay, Type I	square foot
		Includes the cost of the two part polymer resin, aggregate, labor, and incidental items required to install the Thin Bonded Polymer Overlay. This also includes the cost for any repairs that are needed in compliance with the warranty letter.	
46	03392001*	Parapet Sealing	foot
		Measured along Parapet.	
47	03934001*	Structural Pothole Patching	square foot
		Estimated plan quantities are based on preliminary field review for bidding purposes only. Repair the actual quantities determined by the Engineer. Pothole patching may be reduced, deleted, or increased over the bid quantities from the contract. The price of the actual quantity will be paid at the contract unit price if any of these situations occur. Department will not allow additional compensation for	

Measurement and Payment

Item #	Bid Item Number	Bid Item Name	UOM
		repairing blow throughs or removing and repairing failed patches.	
48	028910060	Sign Type A-1, 30 inch X 30 inch	each
		Includes frame or mounting bar as required in SN Series Standard Drawings.	
49	028910065	Sign Type A-1, 36 inch X 36 inch	each
		Includes frame or mounting bar as required in SN Series Standard Drawings.	
50	02891006P	Sign Type A-1, 30 inch X 18 inch	each
		Includes frame or mounting bar as required in SN Series Standard Drawings.	
51	02891007P	Sign Type A-1, 48 inch X 24 inch	each
		Includes frame or mounting bar as required in SN Series Standard Drawings.	
52	028910270	Remove Sign Less Than 20 Square Feet	each
53	028910285	Relocate Sign Less Than 20 Square Feet	each
		Includes removal and disposal of existing concrete sign base.	
54	028910320	Slipbase Sign Base (B3)	each
		Includes installation of top casting, stub base, concrete foundation, and core drilling as required by SN Series Standard Drawings.	
55	028910375	Sign Post P5	each
		Includes post and all hardware to mount sign to post as required by SN Series Standard Drawings.	
56	02892003P	State Furnished Pedestrian Path System Labor	lump sum
		Includes all labor, equipment, and installation of state furnished materials.	
57	02892004P	State Furnished Radar Detection Labor	lump sum
		Includes all labor, equipment, and installation of state furnished materials.

VIII. Use of Minority or Women Owned Banks

Federal Department of Transportation regulations and the Utah Department of Transportation encourage all contractors and suppliers to thoroughly investigate the services offered by banks controlled or owned by minorities or women and utilize their services as when possible.

IX. Bid Conditions
DISADVANTAGED BUSINESS ENTERPRISE (DBE)

POLICY

“Policy Statement”

It is the policy of the DEPARTMENT to take all necessary and reasonable actions to ensure DBEs as defined herein will have equal opportunity to participate in the performance of contracts financed in whole or in part with US Department of Transportation (DOT) funds under this agreement as modified herein.

“Objectives”

The objectives of this policy are to:

1. Ensure nondiscrimination in the award and administration of DOT assisted contracts;
2. Create a level playing field on which DBEs can compete fairly for DOT assisted contracts;
3. Ensure the DBE program is narrowly tailored in accordance with applicable law;
4. Ensure only firms who fully meet 49 CFR 26 eligibility standards are permitted to participate as DBEs;
5. Remove barriers to the participation of DBEs in Federal aid contracts;
6. Assist the development of firms who can compete successfully in the marketplace outside the DBE program; and
7. Provide appropriate flexibility in establishing and providing opportunities for DBEs.

Federal Projects With Full Size Plan Sheets

“Responsibilities”

Implementation of the DBE Program is accorded the same priority as compliance with all other legal obligations incurred by the DEPARTMENT in financial assistance agreements with DOT.

1. The Civil Rights Office will be the DBE liaison officer, who will have direct, independent access to the Executive Director concerning DBE program matters. The Civil Rights Office will be responsible for implementing all aspects of the DBE program. Adequate staff will be assigned to administer the DBE program.
2. The ENGINEER is responsible for supervision of the DBE participation covered by the Contract.

DBE BID AND PERFORMANCE CONDITIONS

“Obligations”

The contractor, subcontractor, service provider, sub recipient, or supplier at any lower tier will not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. The contractor will carry out applicable requirements of 49 CFR part 26 in the award and administration of DOT-assisted contracts. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as the DEPARTMENT deems appropriate.

“Assurances”

Each contract between the DEPARTMENT and the Contractor and each subcontract at any lower tier must include the following assurance:

The contractor, subcontractor, service provider, sub recipient, or supplier will not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. The contractor will carry out applicable requirements of 49 CFR 26 in the award and administration of DOT-assisted contracts. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as the DEPARTMENT deems appropriate, which may include, but is not limited to:

1. Withholding monthly progress payments;
2. Assessing sanctions;
3. Liquidated damages/Disincentives; and/or
4. Disqualifying the contractor from future bidding as non-responsible.

Federal Projects With Full Size Plan Sheets

A. CONTRACT GOAL

1. The DEPARTMENT has determined that one or more contractors can reasonably be expected to compete for the work contained in the proposal for this project. It is, therefore, the direction of the DEPARTMENT that DBE firms will have an affirmative action opportunity to contract for the following percentage of work under this contract:

If the DBE goal which is indicated in Section A, CONTRACT GOAL, of APPENDIX A, BID CONDITIONS, DISADVANTAGED BUSINESS ENTERPRISE (DBE) **is greater than 0.0 percent**, submit DBE Commitment. Refer to Bidding Requirements, Section D, Subsection 1,a, of this Special Provision. (The commitment dollar amount up to the amount of the assigned goal is Race Conscious DBE participation. Any commitment dollar amount in excess of the assigned goal is Race Neutral Participation.)

CONTRACT DBE GOAL: 4 Percent

NOTE: At the time of Bid on Additive Projects, DBE commitment can only be made on Base bid items. No Additive bid items may be committed.

2. GOALS

a. GOAL FOR BID EVALUATION

The above entered DBE percentage is a goal for bid evaluation to determine responsiveness of the proposal as it relates to this specification. Percentages for bidding purposes will be calculated using dollar values and quantities as shown in proposals received for this project. Bidders will compute the percentage of their DBE commitment by dividing the dollar amount of work being committed to certified DBE firms by the total dollar amount of the proposal. This will be the percentage of their DBE commitment reported in the Electronic Bidding System (EBS) software.

Federal Projects With Full Size Plan Sheets

b. RACE CONSCIOUS GOAL

At the time of bid, DBE participation is considered race conscious on projects that are assigned a Goal for Bid Evaluation. The DBE commitment becomes a contract specification upon award. The Bidder must submit with its Bid Proposal a DBE Commitment, prepared within the EBS software, that indicates:

- (1) Name of DBE firm
- (2) Work items to be performed
- (3) Total dollar amount of commitment

If the DBE commitment does not meet or exceed the assigned goal, the Bidder must submit with the Bid Proposal documentation of good faith efforts.

c. RACE NEUTRAL GOAL

At the time of bid, DBE participation is considered race neutral on projects that are NOT assigned a Goal (0%) for Bid Evaluation. In this instance, the DBE participation does not become a contract specification upon award. The Bidder must take equal opportunity action to allow DBEs to compete for and perform on subcontracts. Only work classifications that the Bidder will subcontract need to be considered in evaluating equal opportunity action in the bid preparation.

d. GOAL FOR CONTRACT PERFORMANCE

The Bidder's DBE Commitment becomes an attachment to the Bid Proposal and is a condition of award, and thereby becomes a contract specification.

The committed dollar amount meeting the project goal for bid evaluation will be considered race conscious participation. Any dollar amounts in excess of the project goal for bid evaluation will be considered race neutral participation.

It is the intent of this Policy that the DBE Firm(s) listed for race conscious participation, as a minimum level of participation, will perform to the extent indicated in the Bidder's DBE Commitment. The minimum level of DBE participation includes:

- (1) Indicated DBE firm(s),
- (2) Indicated work item(s) (bid items),
- (3) Indicated total dollar amounts.

Federal Projects With Full Size Plan Sheets

Listed bid items will be considered committed in their entirety unless Bidders designate otherwise in their DBE Commitment. If the DBE will perform only a part of the bid item, i.e., haul only, the Bidder must indicate what part the DBE will perform (Partial Performance). If the DBE will perform only a part of the quantity of the bid item, the Bidder must indicate the estimated quantity of the work to be performed by the DBE (Partial Quantity).

Substitutions of DBE subcontractor(s), work item(s), or decreases of total dollar amount(s) as indicated in the Bidder's DBE Commitment will not be allowed without prior submission of written justification to the ENGINEER and approval of the ENGINEER and the Civil Rights Office.

After award of a contract, substitutions will not be allowed without prior submission of a written "hold harmless" statement from the DBE.

***Any change by the Contractor or the Department in the DBE commitment requires the change be approved by Change Order from the Civil Rights Office. The Contractor will not be entitled to any payment for work or material unless it is performed or supplied by the listed DBE, unless the required approval is obtained.**

Substitution of race neutral participation in excess of the Goal for Bid Evaluation requires equal opportunity efforts to substitute with other DBE participation.

*DEPARTMENT generated decreases of quantities in individual bid items do not require prior approval of the Civil Rights Office—but must be fully justified by the ENGINEER at the conclusion of the project in the Explanation of Overruns and Under-runs Statement. The ENGINEER'S justification will show the total estimated quantity, the final pay quantity as shown on the final estimate invoice, the quantity of the under-run, and the percent of under-run for the individual item. The explanation for the under-run will include the reasons for the under-run and will include as much detail as possible.

There is a difference between the under-run of quantity on individual bid items versus the under-run of DBE commitment on DBE committed bid items, in the approval process. Refer to asterisks (*) above.

Federal Projects With Full Size Plan Sheets

e. GOAL FOR FINAL COMPLIANCE

Percentages for final compliance will be based on actual payments to DBEs. Over-runs and under-runs on individual contract items may require adjustments to the predetermined DBE percentage for a project if those items were not related to DBE performance. "The predetermined percentage for a project" refers to the percentage of the Contractor's DBE Commitment that becomes a contract specification upon award.

B. DEFINITIONS

For the purpose of this Special Provision, the following terms are defined:

1. Contract means a legally binding relationship obligating a seller to furnish supplies or services including but not limited to construction and professional services; and the buyer to pay for them.
2. Contractor means one who participates through a contract or subcontract (at any tier).
3. Disadvantaged Business Enterprise or DBE means a for profit small business concern.
 - a. That has been certified to DBE status by the UUCP.
 - b. That is at least 51 per cent owned by one or more individuals who are both socially and economically disadvantaged or, in the case of a corporation, where 51 percent of the stock is owned by one or more such individuals; and
 - c. Whose management and daily business operations are controlled by one or more of the socially and economically disadvantaged individuals who own it.
 - d. Whose size is limited to the combined average annual gross receipts of **\$23,980,000** from the previous three fiscal years. The Secretary of Transportation may adjust this amount from time to time for inflation.

OR

Whose size is limited to the current SBA Business size standard(s), found in 23 CFR part 121, tied to North American Industry Classification System (NAICS) Codes appropriate to the type(s) of work the firm seeks to perform in DOT-assisted contracts.

Federal Projects With Full Size Plan Sheets

4. DBE Goals mean:
 - a. UDOT's overall goal on DOT-assisted projects. The current approved DBE Goal and Methodology can be found at the following website:

<http://www.udot.utah.gov/main/f?p=100:pg:0:::1:T,V:2250>,
 - b. The race neutral portion of the overall goal reflects the level of DBE participation that would be expected without the effects of discrimination.
 - c. The race neutral portion of the overall goal reflects the level of DBE participation achieved in response to assigned DBE goals. The race conscious portion of the overall goal reflects the level of DBE participation achieved in response to the assigned DBE project goals.

5. DBE Joint Venture means an association of a DBE firm and one or more other firms to carry out a single, for profit business enterprise, for which the parties combine their property, capital, efforts, skills, and knowledge, and in which the DBE is responsible for a distinct, clearly defined portion of the work of the contract and whose share in the capital contribution, control, management, risks, and profits of the joint venture to a degree commensurate with its ownership interest.

The DBE Joint Venture must follow the directions found in the Joint Venture Bidding Process. This process is located at the following link: <http://eprpw.dot.utah.gov/applets-production/ProjectExplorer/ProjectExplorer.asp> then click on EBS Information.

The DEPARTMENT's Civil Rights Office prior to bid opening must approve a DBE Joint Venture in order to be utilized for the satisfaction of contract DBE goals. For DBE participation counted towards goal see 49 CFR Part 26.55.

6. Equal Opportunity Action requires individuals to be considered on the basis of individual capacities and not on the basis of any characteristics generally attributed to the group.

If a bidder requests or accepts bids for subcontract work, the bidder will request and accept bids from DBEs in the work classifications that potentially will be subcontracted.

Federal Projects With Full Size Plan Sheets

7. Good Faith Efforts indicates the efforts made to achieve a DBE goal or other requirements by their scope, intensity, and appropriateness to the objective, which can reasonably be expected to fulfill the program requirements.
8. Lack of Financial Fitness is a performance-based definition based solely on failure to pay promptly. There is no reference to financial status or financial capability.
9. Prompt Payment means payment, including retention, made no later than 30 work days after receipt of payment by the Contractor or Subcontractor, Service Provider or Supplier at **any** lower tier.
10. Race Conscious is the committed dollar amount at the time of bid focused specifically on assisting only DBEs. UDOT must establish contract goals to meet the race conscious portion of its overall DBE goal. To ensure that the DBE program continues to be narrowly tailored to overcome the effects of discrimination, UDOT may adjust the use of contract goals as follows:
 - a. If during the course of any year it is determined the overall goal will be exceeded, UDOT will reduce or eliminate the use of contract goals to the extent necessary to ensure the use of contract goals does not result in exceeding the overall goal.
 - b. If it is determined that UDOT will fall short of its overall goal, then appropriate modifications in the use of race neutral and/or race conscious measures will be made to allow UDOT to meet the overall goal.
11. Race Neutral is the dollar amount that exceeds the committed amount at the time of bid and is, or can be, used to assist all small businesses. UDOT must meet the maximum feasible portion of its overall DBE goal by using race -neutral means of facilitating DBE participation. Race neutral DBE participation includes:
 - a. Awarding a subcontract on a prime contract that does not carry a DBE goal,
 - b. Awarding a subcontract on a prime contract in which the DBE was not considered in making the award even if there is a DBE goal.

For the purposes of this part, race neutral includes gender neutrality.

Federal Projects With Full Size Plan Sheets

12. Regular Employee is a person who:
- a. Would be working for the DBE firm under subcontract with any other contractor.
 - b. Is a permanent employee of the DBE firm
- Or
- Has been recruited through the traditional recruitment and/or employment centers.
- c. Has not recently been employed by the prime contractor on the present project, another subcontractor on the present project, or the renter-leaser of equipment being used on the present project.
 - d. Is not an employee of a construction crew that regularly works for a non-DBE.
 - e. Is not a licensed contractor who is at the time “unemployed” or “between jobs.”
13. Regular Equipment is owned or leased and operated on a long term agreement and not on an ad hoc or contract by contract agreement.
- a. The equipment would be used by the DBE firm on any other subcontract with any other contractor.
 - b. The equipment would be owned by the DBE firm.
- Or
- The equipment would be leased/rented from traditional equipment lease/rental sources.
- c. The DBE firm would have a rental/lease agreement for any rented or leased equipment.
 - d. The equipment cannot belong to:
 - (1.) Prime Contractor
 - (2.) Another subcontractor on the present project.
 - (3.) Supplier of materials being installed by the DBE firm.
 - e. The equipment cannot come from and be operated by another contractor.

Federal Projects With Full Size Plan Sheets

14. Reasonable Bid

Any bid that meets the Department bidding requirements and is not greater than 10% above the Engineer's Estimate or exceeds available funds.

15. Responsible Bidder

A responsible bidder has the apparent ability and capacity to perform the contract requirements.

In addition to UDOT prequalification, when applicable, a responsible bidder is defined as one who has signed (manually or electronically) and submitted a bid with the DBE Bid Conditions Assurance of good faith effort included. Part I of this Policy certifies the intention to meet the DBE goal of a proposed contract or to continue a good faith effort. These goals may be met by subcontracting or leasing contracts with a DBE or purchasing material from a DBE, provided that the work or material becomes a part of a proposed contract.

16. Responsive Bidder

- a. A responsive bidder is a bidder who unequivocally offers to provide services or supplies in conformity with the material terms of the solicitation. In addition to UDOT prequalification and other bidding requirements, a responsive bidder in relationship to this Policy is defined as one who submits evidence of proposed subcontract performance with certified DBE firms to achieve the required dollar amount necessary to achieve the percentage goal.
- b. Bidders may be considered as presumptively responsive if they have failed to satisfy the advertised DBE goal set for the proposed contract but have certified in their bid that good faith efforts have been expended to meet the goal and they will continue during the performance of the contract to locate, solicit, and involve DBE firms for contract performance. Documentation of the bidder's good faith efforts must be included with the bid package for the DEPARTMENT's review and assessment. The DEPARTMENT will render any bid non-responsive that fails to do so.

Federal Projects With Full Size Plan Sheets

17. Satisfactory Completion of a subcontract occurs when:
- a. The subcontractor has satisfactorily completed in all respects the work under the Contract.
 - b. The Contractor and the subcontractor have notified the ENGINEER in writing that the work of the subcontractor has been completed.
 - c. The Engineer will be given a reasonable length of time to check quantities if necessary. Checking quantities does not guarantee the absolute correctness of quantities.
 - d. The Contractor and the subcontractor have satisfactorily executed and delivered to the ENGINEER all documents, certificates and proofs of compliance required by the Contract. The satisfactory execution and delivery of these documents, certificates and proofs of compliance to the ENGINEER is a material requirement of the contract.
 - e. The ENGINEER accepts in writing the work of the subcontract.
 - f. Satisfactory Completion refers only to payment of retainage and accrued interest. A determination of Satisfactory Completion and payment in full for work performed does not relieve the contractor nor the subcontractor from any contractual obligation.
18. Satisfactory Performance means work performed and materials furnished in conformity with the plans and specifications.
19. Service Provider means a broker or a middle man. A business person who buys, sells or performs a service for another in exchange for a mark up or commission.
20. Subcontractor

A subcontracting arrangement is generally considered to exist when a person or firm assumes an obligation to perform a part of the contract work and the following conditions are present.

- a. The person or firm performing the work is specifically experienced and equipped for such work.
- b. Compensation is related to the amount of work accomplished rather than being on an hourly basis.

Federal Projects With Full Size Plan Sheets

- c. Choice of work methods, except as restricted by the specifications, and the furnishing and controlling of labor and equipment are exercised by the subcontractor with only general supervision being executed by the prime contractor.
- d. Personnel involved in the operation are under the direct supervision of the subcontractor and are included on the subcontractor's payroll.

All conditions involved will be considered and no one condition alone will normally determine whether a subcontract actually exists.

In all cases, a DBE subcontractor must be an independent organization, and the ownership and control by the socially and economically disadvantaged individual(s) must be real and continuing.

The prime contractor, a subcontractor, or a supplier will not be responsible for the various operating and management activities of a DBE firm.

21. Supplier

Provides or furnishes materials, goods or services that may be incorporated into the project. The supply transaction is to be documented by an appropriate purchase agreement that includes the required provisions for Federal-aid construction projects.

22. UUCP The Utah Unified Certification Program (UUCP) provides "one-stop shopping" to applicants for DBE certification, such that an applicant is required to apply only once for a DBE certification that is honored by all recipients of Federal-aid Funds in the State of Utah.

C. DETERMINATION OF DBE CONTRACTOR'S ELIGIBILITY BY UUCP

1. Any Contractor may apply to the UUCP for status as a DBE. Applications will be made on forms provided by the UUCP entitled "UNIFORM CERTIFICATION APPLICATION" or "Information for Determining DBE Joint Venture Eligibility," Form No. R-817. Application need not be made in connection with a particular bid. Only work contracted to certified DBE prime contractors or subcontractor to firms that have applied for and have been granted status as a DBE by the UUCP will be considered toward contract goals as established in Subsection A.

Federal Projects With Full Size Plan Sheets

2. It will be the Contractor's responsibility to submit a DBE application so that the UUCP has time to review it. The UUCP will review applications in a timely manner but is not committed to approve DBE status within any given period of time. The UUCP must have ample lead time to review, evaluate, and verify information provided with an application.
3. The DEPARTMENT will maintain a UUCP Unified DBE Directory of DBE Contractors, vendors, service providers and suppliers that is updated as changes occur for the purpose of providing a reference source to assist any bidder in meeting the requirements of this bid condition. Bidders must use the most current DBE information available on the web site when submitting bids. A current UUCP DBE directory representing certified DBE Contractors is available through the UDOT Civil Rights Office, and also on the Internet at (click on this link):

<http://www.udot.utah.gov/main/f?p=100:pg:::::V,T:,198>

An electronic file of the UUCP DBE Directory is available for download to use in the Electronic Bidding System (EBS) at the following URL (click on this link):

<http://www.udot.utah.gov/main/f?p=100:pg:::::V,T:,317>

4. In meeting the requirements of this bid condition, bidders are in no way limited to the DBE Directory referred to in 3 above in seeking out and negotiating with the DBE Contractors and determining which items of work will be subcontracted to DBE Contractors. Bidders will exercise their own judgments in selecting any subcontractor to perform any portion of the work.

DBE credit will not be allowed toward race conscious goals for a firm or joint venture that has not been DBE certified by the UUCP.

D. BIDDING REQUIREMENTS

All bidders must satisfy the bidding requirements of this section D BIDDING REQUIREMENTS. A DBE prime contractor's performance does not count toward fulfilling the DBE goal. A prime bidder who is a DBE contractor will meet the DBE goal by using other DBE subcontractors or by using good faith efforts.

1. DBE Bid Assurance

a. Race Conscious Goal

Race conscious measure or program is one that is focused specifically on assisting only DBEs. This goal is the amount the prime must commit to DBEs at the time of bid or a good faith effort must be documented.

2. DBE Race Conscious Commitment

For a bid to be considered responsive, Bidders will submit the following information regarding DBE compliance with the EBS prepared Bid Proposal:

Submit a DBE Commitment of work that will be subcontracted to certified DBE firm(s) as listed in the UUCP's Directory or DBE firms that have been approved by the UUCP prior to bid opening.

a. The names of DBE firms that will participate in the contract;

b. A specific description of the work each named DBE firm will perform (list specific bid items). Listed bid items will be considered committed in their entirety unless Bidders designate otherwise in their DBE Commitment.

(1.) If mobilization is a bid item partially committed to a DBE, indicate the dollar amount of the DBE mobilization.

(2.) If a partial quantity is committed to a DBE, indicate the quantity committed to the DBE.

(3.) If a partial performance of an item is committed to a DBE, explain what part of the item the DBE will perform;

Federal Projects With Full Size Plan Sheets

- c. The dollar amount of participation by each named DBE firm;
- d. If the contract goal is not met, evidence of good faith efforts is required at the time of bid.

The DBE Commitment is to be included in the prepared bid, and said information will be kept confidential and will be reviewed to determine the apparent low bidder has either met the DBE Contract Goal or has documented acceptable Good Faith Efforts.

3. DBE Race Neutral Participation

Race Neutral DBE participation includes anytime a DBE;

- a. wins a Prime Contract through customary bidding procedures,
- b. is awarded a subcontract on a prime contract that does not carry a DBE goal (0% goal),
- c. wins a subcontract from a prime contractor that did not consider its DBE status in making the award (e.g., a prime contractor that uses a strict low bid system to award subcontracts).

4. DBE Written Confirmation

Low Bidder will submit to the Civil Rights Office within three (3) work days after the bid opening written confirmation from each DBE participating in the contract as provided in the Prime Contractor's DBE Commitment. The written confirmation will include the following information:

- a. A description of the work to be performed (list specific bid items). Listed bid items will be considered committed in their entirety unless Contractors designate otherwise in their DBE commitment.
 - (1) If mobilization is a bid item that is partially committed, confirm the dollar amount of the mobilization to be performed.
 - (2) If a partial quantity is committed, confirm the quantity to be performed.
 - (3) If a partial performance of an item is committed, confirm what part of the item will be performed.
 - (4) Unit bid prices for each bid item committed to a DBE.

Federal Projects With Full Size Plan Sheets

- (5) Total dollar amounts (mathematical extensions) for each bid item committed to a DBE
 - b. The dollar amount of participation by each named DBE firm.
5. Good Faith Efforts

Bidders who fail to meet the DBE goal for bid evaluation must demonstrate with documentary evidence they made good faith efforts . Bidders are required to include the Good Faith Efforts Documentation with the EBS prepared Bid Proposal. The said information will be kept confidential and not reviewed unless the Bidder is otherwise determined to be the low Bidder or UDOT and authorized representatives elect to review said information in making their determination as to award of the contract. For the bid to be considered responsive, Bidders will include with the BID PROPOSAL specific documentary evidence that good faith efforts have been made to meet the goal.

Attached hereto and marked Exhibit A, and by this reference made a part hereof, is a list of actions that may be used to prove the type of efforts prospective Bidders should consider in their attempts to demonstrate good faith efforts. The list of actions, as contained in Exhibit A, is not intended to be an exclusive list of efforts that a prospective Bidder may wish to consider in demonstrating good faith efforts to satisfy DBE participation requirements. The determination of good faith efforts will be based upon the information and documentation of the actions supplied by the Bidder with their bid proposal. The DEPARTMENT reserves the right to investigate and verify such information or to request the low dollar Bidder clarify information submitted within 7 days of the time of bid. The 7 days will be reduced to 5 days beginning January 1, 2017.

Contacts that have been made with DBE firms regarding potential work to be subcontracted and the results of such contacts are to be submitted with the EBS prepared Bid Proposal in Race Neutral DBE Documentation which contains:

- (1) The work classifications that will be subcontracted
- (2) DBE firms contacted
- (3) Method of contact (i.e. emails, letters, postings, etc.)
- (3) Result of contact
- (4) Name and contact info of anticipated DBE subcontractor(s)
- (5) Anticipated work items to be performed by DBEs
- (6) Anticipated dollar amount of subcontract(s)

Federal Projects With Full Size Plan Sheets

The DBE information submitted includes the NAICS code applicable to the kind of work the DBE will perform on the contract, and, when a non-DBE subcontractor is selected over a DBE, copies of the quotes from each DBE and non-DBE subcontractor. The bidder will make copies of DBE subcontracts available upon request.

The following items are types of efforts that should be made for acceptable Good Faith Efforts:

- (1) Conducting market research and solicit through all reasonable means DBEs with capability to do the proposed work
- (2) May include attending pre-bid meetings and matchmaking events
- (3) Posting notices; sending emails
- (4) Solicit as early as possible
- (5) Unbundling
- (6) Establishing flexible timeframes

6. Award of the Contract

The award of the contract, if awarded, will be made to the apparent successful responsive, responsible Bidder who submitted a reasonable bid for the contract and has complied with this Subsection D Bidding Requirements.

7. Administrative Reconsideration

Good faith efforts as used herein will be determined on a case by case basis. If it is determined that the apparent low Bidder has failed to meet the requirements of Exhibit A, the bidder will be provided an opportunity for administrative reconsideration.

- a. Official(s) who did not take part in the original determination will perform the administrative reconsideration.
- b. The Bidder will have the opportunity to provide written documentation or argument concerning whether the goal was met or adequate good faith efforts were made.
- c. The Bidder will have the opportunity to meet in person with the reconsideration official to discuss whether the goal was met or adequate good faith efforts were made.
- d. The Bidder will be notified in writing of the decision and the basis for the decision.

Federal Projects With Full Size Plan Sheets

- e. The reconsideration decision is administratively final and is not appealable to FHWA or the DOT.

E. COUNTING DBE PARTICIPATION TOWARD GOALS FOR BID EVALUATION

1. The DEPARTMENT will recognize and grant DBE credit toward the goal for bid evaluation (race conscious goals) for work committed to DBE contractors ONLY in the types of work for which DBE certification has been granted by the UUCP prior to bid opening. It is necessary that all bidders refer to the UUCP DBE Directory for direction and guidance. A current copy of the DBE directory is available through the Civil Rights Office and on the Internet at (click on this link):

<http://www.udot.utah.gov/main/f?p=100:pg:::::V,T:,198>

An electronic file of the DBE Directory is available for downloading to use in the Electronic Bidding system (EBS) at the following URL (click on this link):

<http://www.udot.utah.gov/main/f?p=100:pg:::::V,T:,317>

2. Commitments to DBEs that exceed the Goal for Bid Evaluation will be considered as both race conscious and race neutral. The dollar amount of the Goal for Bid Evaluation will be considered to be race conscious participation. Any dollar amounts in excess of the Goal for Bid Evaluation will be considered as race neutral participation.
3. When a DBE bids as a prime contractor and utilizes themselves as a DBE participant, their commitment will be counted as race conscious. The prime contractor is still encouraged to use other DBE subcontractors.

F. COUNTING DBE PARTICIPATION TOWARD GOALS FOR PERFORMANCE

Subcontracts to DBEs that exceed the Goal For Bid Evaluation will be considered in part as race conscious participation and in part as race neutral participation. Any dollar amounts in excess of the Goal For Bid Evaluation will be considered as race neutral participation.

It is intended that the Contractor will utilize the subcontractors designated in the DBE Commitment in the performance of the contract. Any changes in the Contractor's DBE Commitment, such as substitution of a DBE subcontractor, substitution of contract items, or decrease in total dollar amount must be approved by the DEPARTMENT and must be covered by a Change Order. Unauthorized substitutions or eliminations may result in the imposition of sanctions. Failure to meet the Goal for Performance established at the time of award by the Contractor's DBE Commitment, without adequate justification, including concurrence of the ENGINEER and Civil Rights Office, will result in the imposition of sanctions as provided in Part I of this Special Provision.

1. Contractors may count toward their contract goals a portion of the total dollar value of a joint venture contract eligible under the standards of this bid condition equal to the percentage of the ownership and controls of the DBE partner in the joint venture.
2. The ENGINEER will recognize and grant DBE credit for work performed by DBE contractors ONLY in the types of work for which DBE certification has been granted by the UUCP prior to bid opening. It is necessary all Bidders refer to the UUCP'DBE Directory for direction and guidance. A current copy of the UUCP DBE directory is available through the Civil Rights Office and on the Internet at (click on this link):

<http://www.udot.utah.gov/main/f?p=100:pg:::::V,T:,198>

An electronic file of the DBE Directory is available for download to use in the Electronic Bidding system (EBS) at the following URL (click on this link):

<http://www.udot.utah.gov/main/f?p=100:pg:::::V,T:,317>

3. Contractors may count only the value of the work actually performed by the DBE toward the DBE goals.
 - a. Work performed by the DBE's own forces using "regular employees" and "regular equipment."
 - b. The cost of supplies and materials obtained and purchased by the DBE and equipment leased for the work of the contract.

Federal Projects With Full Size Plan Sheets

- c. Work that a DBE subcontracts to a lower tier DBE firm.
4. Contractors may not count toward the DBE goals:
 - a. Supplies and material purchased and equipment leased by the DBE from the prime Contractor or its affiliates or another subcontractor on the project.
 - b. Work that a DBE subcontracts to a lower tier non-DBE firm.
5. Contractors may count toward their goals only expenditures to a DBE that performs a commercially useful function in the work of the contract.
 - a. A DBE performs a “commercially useful function” when it is responsible for the execution of the work of the contract and is carrying out its responsibilities by actually performing, managing, and supervising the work involved. To perform a commercially useful function, the DBE must also be responsible, with respect to materials and supplies used on the contract, for negotiating price, determining quality and quantity, ordering the material, and installing (where applicable) and paying for the material itself.
 - b. The DEPARTMENT will evaluate the amount of work subcontracted, industry practices, whether the amount the firm is to be paid under the contract is commensurate with the work it is actually performing and the DBE credit claimed for its performance of the work, and other relevant factors.
 - c. A DBE does not perform a commercially useful function if its role is limited to that of an extra participant in a transaction, contract, or project through which funds are passed in order to obtain the appearance of DBE participation. In determining whether a DBE is such an extra participant, the DEPARTMENT must examine similar transactions, particularly those in which DBEs do not participate.
 - d. A DBE does not perform a commercially useful function if it does not perform or exercise responsibility for at least 30 percent of the total cost of its contract with its own work force, or the DBE subcontracts a greater portion of the work of a contract than would be expected on the basis of normal industry practice for the type of work involved.

Federal Projects With Full Size Plan Sheets

6. The DEPARTMENT will use the following factors in determining whether a DBE trucking company is performing a commercially useful function:
 - a. The DBE must itself own and operate at least one fully licensed, insured, and operational truck used on the contract.
 - b. The DBE must be responsible for the management and supervision of the entire trucking arrangement for the purpose of meeting DBE goals.
 - c. The DBE receives credit for the total value of the transportation services it provides on the contract using trucks it owns, insures, and operates using drivers it employs.
 - d. The DBE may lease trucks from another DBE firm, including an owner operator who is certified as a DBE. The DBE who leases trucks from another DBE receives credit for the total value of the transportation services the lessee DBE provides on the contract.
 - e. The DBE may also lease trucks from a non DBE firm, including from an owner operator. The DBE who leases trucks from a non DBE is entitled to credit for the total value of the transportation services provided by non-DBE lessees as long as the DBE provides the employees for the leased trucks.
 - f. A lease must indicate the DBE has exclusive use of and control over the truck. This does not preclude the leased truck from working for others during the term of the lease with the consent of the DBE, so long as the lease gives the DBE absolute priority for use of the leased truck. Leased trucks must display the name and identification number of the DBE.

7. Contractors may count expenditures with DBEs for materials or supplies as provided in the following:
 - a. If the materials or supplies are obtained from a DBE manufacturer, 100 percent of the cost of the materials or supplies counts toward DBE goals.

For purposes of this paragraph, a manufacturer is a firm that operates or maintains a factory or establishment that produces, on the premises, the materials, supplies, articles, or equipment required under the contract and of the general character described by the specifications.

Federal Projects With Full Size Plan Sheets

- b. If the materials or supplies are purchased from a DBE regular dealer, 60 percent of the cost of the materials or supplies counts toward DBE goals.

For purposes of this paragraph, a regular dealer is a firm that owns, operates, or maintains a store, warehouse, or other establishment in which the materials, supplies, articles or equipment of the general character described by the specifications and required under the contract are bought, kept in stock, and regularly sold or leased to the public in the usual course of business.

- (1) To be a regular dealer, the firm must be an established, regular business that engages, as its principal business and under its own name, in the purchase and sale or lease of the products in question.
- (2) A firm may be a regular dealer in such bulk items as petroleum products, steel, cement, gravel, stone, or asphalt without owning, operating or maintaining a place of business if the firm both owns and operates distribution equipment for the products. Any supplementing of regular dealers' own distribution equipment will be by a long-term lease agreement and not on an ad hoc or contract-by-contract basis.
- (3) Packagers, brokers, manufacturers' representatives, or other persons or firms who arrange, or expedite transactions are not regular dealers.
- (4) A DBE trucking company that picks up a product from a manufacturer or regular dealer and delivers the product to the Contractor performs a delivery service. Credit will not be given based on a percentage of the cost of the product; credit will be allowed only for the cost of the transportation service.

Federal Projects With Full Size Plan Sheets

8. If the materials or supplies are purchased from a service provider, the fees or commission charged for assistance in the procurement of the materials and supplies, or fees or transportation charges for the delivery of materials or supplies, count toward the DBE goals.

A Service Provider is a business that is neither a manufacturer nor a regular dealer but simply transfers title of a product from manufacturer to ultimate purchaser or a firm that puts a product into a container for delivery. A service provider charges a fee or a commission for assistance in the procurement of the materials and supplies, or fees or transportation for the delivery of materials or supplies required on a job site.

- a. Only the fees, commissions, or transportation performed by the DBE service provider count toward the DBE goals. The DEPARTMENT must determine the fees are reasonable and not excessive as compared with fees customarily allowed for similar services.
 - b. No portion of the cost of the materials and supplies count toward the DBE goals. Documentary evidence of the supply agreements, i.e., sales contract, purchase order, etc., will be submitted to the Resident Engineer or Consultant Engineer at the Preconstruction Conference. The agreement will set forth the estimated quantities, unit prices, total dollar amounts, material guarantees, delivery, and payment requirements including the requirements listed part E, 4, e, of this DBE Special Provision.
9. Prompt payment for the work accomplished is an integral part of the concept of a commercially useful function.

See Section F, Subsection 6.a for a definition of “commercially useful function.”

10. When a DBE subcontractor is terminated, or fails to complete its work on the contract for any reason, the Contractor must make good faith efforts to find another DBE subcontractor to substitute for the original DBE. Direct these good faith efforts at finding another DBE to perform at least the same amount of work under the contract as the DBE that was terminated, to the extent needed to meet the contract goal established for the project. Document the good faith efforts. If the Department requests documentation under this provision, submit the documentation within 7 days, which may be extended for an additional 7 days if necessary at the request of the contractor, and the Department will provide a written determination to the contractor stating whether or not good faith efforts have been demonstrated.

Federal Projects With Full Size Plan Sheets

Failure by the contractor to carry out the requirements of this part is a material breach of the contract and may result in the termination of the contract or such other remedies set forth in that section you deem appropriate if the prime contractor fails to comply with the requirements of this section.

G. CONTRACTOR'S RESPONSIBILITY

1. It is the Contractor's responsibility to determine the level of professional competence and financial responsibility of any proposed DBE subcontractor. The Contractor will ascertain the proposed DBE subcontractor is particularly experienced and equipped for the work of the subcontract.
2. It is the Contractor's responsibilities to monitor and assure DBE's listed to fulfill DBE goals perform a commercially useful function.

H. DBE SUBCONTRACTOR'S FAILURE TO PERFORM SUCCESSFULLY

If, during the performance of the contract, the Prime Contractor determines a DBE subcontractor is unable to perform successfully, the Contractor will make good faith efforts to replace the DBE subcontractor with another DBE to fulfill the Goal for Bid Evaluation. For Race Conscious DBE participation, the Contractor will consider the uncompleted DBE committed work items as well as other work items as a part of the good faith efforts. All substitutions of DBE subcontractors will receive prior approval by the Civil Rights Office.

Federal Projects With Full Size Plan Sheets

The Contractor will not substitute DBE subcontractor(s), work item(s), nor decrease dollar amount(s) as indicated in the Contractor's DBE Commitment Substitutions for the **good cause reasons** defined in 49 CFR 26.53 without performing the following steps:

1. Give notice in writing to the DBE subcontractor, with a copy to Civil Rights, of their intent to substitute and the reason of its request.
2. Obtaining a written response from the DBE stating why they would object or oppose to the substitution or decrease. The Contractor must give the DBE five (5) days to respond to the notice of substitution.
3. Obtain Civil Rights Office written consent prior to any substitution, termination or decrease of DBE commitment.

The Contractor will not substitute DBE subcontractor(s), work item(s), nor decrease dollar amount(s) as indicated in the Contractor's DBE Commitment without prior submission of written justification to the ENGINEER and without prior approval of the ENGINEER and the Civil Rights Office.

Unauthorized substitutions of the DBE(s), under-runs of work item(s), or decreases in dollar amount(s) may result in the imposition of sanctions as allowed under Section I.

UDOT reserves the right to authorize completion of the work that was subcontracted to a DBE who is unable to perform successfully by either of the following methods:

1. Approve, at no additional cost to the DEPARTMENT, a replacement DBE subcontractor and, when appropriate, modify the contract to provide for reasonable extra time necessary to obtain a DBE replacement at no additional cost to the DEPARTMENT.
2. Direct the Contractor to perform at unit bid prices. In the event this option is selected, the percentage DBE goal will be adjusted as may be appropriate.

I. SANCTIONS

1. The Contractor's DBE Commitment becomes a 3-part commitment comprised of the DBE Contractor(s), work item(s) and dollar amount(s). The Commitment becomes a contract specification upon award of the contract and becomes the minimum goal for contract performance.

If the Contractor fails to achieve the minimum goal established in the contract at the time of the award of the contract or later modified, the

Federal Projects With Full Size Plan Sheets

contract payments will be reduced as a disincentive by an amount equal to the dollar amount of work not performed by the DBE. The dollar amount of any sanction will be computed using the unit prices indicated in the DBE subcontract.

Exceptions:

- a. Any authorized adjustment in the DBE Commitment that has been approved by the ENGINEER and Civil Rights Office.
 - b. Race neutral participation.
2. The ENGINEER will deduct maximum points for Compliance with EEO when completing the Contract Performance Report.

J. RECORD KEEPING

1. The DEPARTMENT must create and maintain a Bidders list consisting of all firms bidding on prime contracts and bidding or quoting subcontractors on DOT-assisted projects. For every firm, the following information must be submitted annually:
 - a. Firm name
 - b. Firm address
 - c. Firm's status as a DBE or non-DBE
 - d. Age of firm
 - e. Annual gross receipts of the firm.

Every firm bidding or quoting as a prime or subcontractor at any level on DOT-assisted projects must register annually with UDOT.

NOTE: Items (a) and (b) will be completed in the current bidding software by using the 'Quote Comparison' and submitted with your bid.

2. With the bid or no later than 10 work days after bid opening date, each and every prime bidder must submit to the DEPARTMENT a list of all firms bidding and/or quoting as subcontractors, service providers or suppliers.* The Prime Bidder must also submit for each and every firm sub-quoting the following information:
 - a. Firm Name

Federal Projects With Full Size Plan Sheets

- b. Firm address
- c. Work classification(s) bid by subcontractor, service provider or supplier:
 - (1) Building
 - (2) Concrete: Curb & gutter, Flatwork, Inlet Boxes, etc.
 - (3) Concrete: Structural
 - (4) Consulting firms
 - (5) Demolition
 - (6) Electrical: Hwy lighting, signals & fiber optics
 - (7) Equipment rentals and sales
 - (8) Excavation
 - (9) Fencing
 - (10) Grading
 - (11) Guardrail
 - (12) Landscaping & erosion control
 - (13) Miscellaneous
 - (14) Painting: Highway structures
 - (15) Painting: Highway striping & painted messages
 - (16) Paving: Asphalt highway & runway, etc.
 - (17) Paving: Concrete
 - (18) Paving: Miscellaneous
 - (19) Pipe Culverts, drainage, sewer & water
 - (20) Reconstruction : Manholes, etc.
 - (21) Rotomilling
 - (22) Sawing & sealing
 - (23) Signs permanent
 - (24) Steel reinforcing
 - (25) Steel structural
 - (26) Surveying
 - (27) Traffic Control: Flagging
 - (28) Traffic Control: Temp. Signs and Devices
 - (29) Trucking
 - (30) Supplier: Manufacturer
 - (31) Supplier: Regular Dealer
 - (32) Supplier: Service Provider

*NOTE: This requirement can be met with the 'Quote Comparison' function in the current bidding software. The report must be printed and faxed to the Civil Rights Department at (801) 965-4101.

Exhibit A

Suggested Actions and Required Documentation to Demonstrate

Good Faith Efforts to Comply With DBE Requirements

A Bidder must show that it took necessary and reasonable steps to achieve a DBE goal that, by their scope, intensity, and appropriateness, can reasonably be expected to fulfill the program requirement. The efforts employed should be those that would be taken if a Bidder were actively and aggressively trying to obtain DBE participation sufficient to meet the DBE contract goal. Mere pro forma efforts are not good faith efforts to meet the DBE contract requirements.

Documentary evidence of each action taken must be submitted with the Bid Proposal.
--

The following is taken, with some modification, from CFR 49 Part 26, Appendix A. It is not intended to be a mandatory checklist, nor is it intended to be exclusive or exhaustive.

GUIDANCE CONCERNING GOOD FAITH EFFORTS

- I. When the DEPARTMENT establishes a contract goal on a Federal aid contract, a Bidder must, in order to be responsive, make good faith efforts to meet the goal. The Bidder can meet this requirement in either of two ways:
 - A. The Bidder can meet the goal, documenting commitments for participation by DBE firms sufficient for this purpose.
 - B. If it doesn't meet the goal, the Bidder can document adequate good faith efforts. This means that the Bidder must show that it took all necessary and reasonable steps to achieve a DBE goal or other requirement of this part that, by their scope, intensity, and appropriateness to the objective, could reasonably be expected to obtain sufficient DBE participation, even if they were not fully successful.
- II. In any situation in which the DEPARTMENT has established a contract goal, CFR 49, Part 26 requires UDOT to use the good faith efforts mechanism of this part. It is up to the DEPARTMENT to make a fair and reasonable judgment whether a Bidder that did not meet the goal made adequate good faith efforts. It is important for the DEPARTMENT to consider the quality, quantity, and intensity of the different kinds of efforts that the Bidder has made. The efforts employed by the Bidder should be those that one could reasonably expect a Bidder to take if the Bidder were actively and aggressively trying to obtain DBE participation sufficient to meet the DBE contract goal. Mere pro forma efforts are not good faith efforts to meet the DBE contract requirements. The DEPARTMENT emphasizes, however, that its determination concerning the sufficiency of the firm's good faith efforts is a judgment call: meeting quantitative formulas is not required.
- III. The U. S. Department of Transportation also strongly cautions the DEPARTMENT against requiring that a Bidder meet a contract goal (i.e., obtain a specified amount of DBE participation) in order to be awarded a contract, even though the Bidder makes an adequate good faith efforts showing. This rule specifically prohibits UDOT from ignoring bona fide good faith efforts.
- IV. The following is a list of types of actions that UDOT should consider as part of the Bidder's good faith efforts to obtain DBE participation. It is not intended to be a mandatory checklist, nor is it intended to be exclusive or exhaustive. Other factors or types of efforts may be relevant in appropriate cases.
 - A. Soliciting through all reasonable and available means (e.g. attendance at pre bid meetings, advertising and/or written notices) the interest of all certified DBEs who have the capability to perform the work of the contract. The Bidder must solicit this interest within sufficient time to allow the DBEs to respond to the solicitation. The Bidder must determine with certainty if

Federal Projects With Full Size Plan Sheets

the DBEs are interested by taking appropriate steps to follow up initial solicitations.

- B. Selecting portions of the work to be performed by DBEs in order to increase the likelihood that the DBE goals will be achieved. This includes, where appropriate, breaking out contract work items into economically feasible units to facilitate DBE participation, even when the prime Contractor might otherwise prefer to perform these work items with its own forces.
- C. Providing interested DBEs with adequate information about the plans, specifications, and requirements of the contract in a timely manner to assist them in responding to a solicitation.
- D. Negotiating in good faith with interested DBEs.
 - (1) It is the Bidder's responsibility to make a portion of the work available to DBE subcontractors and suppliers and to select those portions of the work or material needs consistent with the available DBE subcontractors and suppliers, so as to facilitate DBE participation. Evidence of such negotiation includes the names, addresses, and telephone numbers of DBEs that were considered; a description of the information provided regarding the plans and specifications for the work selected for subcontracting; and evidence as to why additional agreements could not be reached for DBEs to perform the work.
 - (2) A Bidder using good business judgment would consider a number of factors in negotiating with subcontractors, including DBE subcontractors, and would take a firm's price and capabilities as well as contract goals into consideration.
 - (a) The fact that there may be some additional costs involved in finding and using DBEs is not in itself sufficient reason for a bidder's failure to meet the contract DBE goal, as long as such costs are reasonable.
 - (b) No specific price differential has been established by 49 CFR 26. This approach allows flexibility.
 - (c) Along with the reasonableness of the cost necessarily comes the fact that prime Contractors are not expected to bear unreasonable costs.
 - (d) Any burden that a non-DBE subcontractor might face is also limited by the reasonableness of competing bids.

Federal Projects With Full Size Plan Sheets

- (3) The ability or desire of a prime Contractor to perform the work of a contract with its own organization does not relieve the Bidder of the responsibility to make good faith efforts. Prime Contractors are not, however, required to accept higher quotes from DBEs if the price difference is excessive or unreasonable.
- (4) The ability or desire of a prime Contractor to bundle the work of a subcontractor who wishes to perform all the work of the subcontract with its own organization does not relieve the Bidder of the responsibility to require a subcontractor to make good faith efforts. Subcontractors are not required to accept higher quotes from lower tier DBEs if the price difference is excessive or unreasonable.
- E. Not rejecting DBEs as being unqualified without sound reasons based on a thorough investigation of their capabilities. The Contractor's standing within its industry, membership in specific groups, organizations, or associations and political or social affiliations (for example union vs. non-union employee status) are not legitimate causes for the rejection or non-solicitation of bids in the Contractor's efforts to meet the project goal.
- F. Making efforts to assist interested DBEs in obtaining bonding, lines of credit, or insurance as required by the recipient or Contractor.
- G. Making efforts to assist interested DBEs in obtaining necessary equipment, supplies, materials, or related assistance or services.
- H. Effectively using the services of available minority/women community organizations; minority/women Contractors' groups; local, state, and Federal minority/women business assistance offices; and other organizations as allowed on a case by case basis to provide assistance in the recruitment and placement of DBEs.

NOTE: The DBE 'Contact Log' in EBS, submitted as part of the Bid Proposal, can be used to document the following efforts:
IV. A.
IV. C.
IV. D. (1)

The 'Quote Comparison' in EBS, submitted as part of the Bid Proposal, can be used to document the following efforts:
IV. B.
IV. D. (3)

Federal Projects With Full Size Plan Sheets

- V. In determining whether a Bidder has made good faith efforts, the DEPARTMENT may take into account the performance of other Bidders in meeting the contract. For example, when the apparent successful Bidder fails to meet the contract goal, but others meet it, UDOT may reasonably raise the question of whether, with additional reasonable efforts, the apparent successful bidder could have met the goal. If the apparent successful Bidder fails to meet the goal, but meets or exceeds the average DBE participation obtained by other Bidders, you may view this, in conjunction with other factors, as evidence of the apparent successful Bidder having made good faith efforts.

Submit with the Bid Proposal documentary evidence to prove that good faith efforts were accomplished:

1. Submit copies of all solicitations: correspondence, faxes, advertisements, telephone logs with dates, times, names of persons contacted, nature of conversation, DBEs' responses, and etc.
2. If DBEs submitted quotes that were not used because the range of additional costs was determined to be excessive or unreasonable, submit the range that has been determined by the Bidder to be a reasonable range of additional costs and explain how that range was determined.
3. As a part of demonstrating a reasonable range of additional costs, submit copies of all subcontractor quotes, copies of spread sheet(s) which compare all DBE quotes with non-DBE quotes and which include bid item(s) quoted, work classifications, quantities, prices, and dollar amounts.
4. Submit a narrative of specific names and types of information, assistance, considerations given, and efforts to assist DBEs under Item IV, subparts C through F.

DBE BID ASSURANCE

DBE PARTICIPATION

If the DBE goal which is indicated in Section A, CONTRACT GOAL, of APPENDIX A, BID CONDITIONS, DISADVANTAGED BUSINESS ENTERPRISE (DBE) **is greater than 0.0 percent**, submit DBE Commitment.

By signing the BID REPORT (either manually or electronically), it is understood that those individuals who sign as owners or authorized representatives of the Bidder, have read and are familiar with APPENDIX A, SPECIAL PROVISION, BID CONDITIONS, DISADVANTAGED BUSINESS ENTERPRISE and hereby certify that good faith efforts (when applicable as defined by Section IX, Bid Conditions, D.5) have been utilized to meet or exceed the goal of the DBE Program as established by the DBE Special Provision.

Indicate intended DBE commitment.

_____ We intend to meet or exceed the contract goals as per the DBE Commitment which is submitted with the Bid Proposal (when project goal is greater than 0.0).

_____ We have not met the advertised DBE Project goal. A Good Faith Effort is required. We have provided the required documentation per 49 CFR, Part 26.53.

Documentation of Good Faith Efforts is not required on a 0.0 percent goal project.

X. Attention Contractors
E.E.O. Affirmative Action Requirements on
Federal and Federal-Aid Construction Contracts of \$10,000 or More

Include the Notice of Requirement for Affirmative Action to Ensure Equal Employment Opportunity, Executive Order (EO) 11246, as amended (incorporated by reference & Appendix A - below) and the Standard Federal Equal Employment Opportunity Construction Contract Specifications set forth in §60-4.3 (incorporated by reference) in all requests for bids/solicitations on all contracts and subcontracts of \$10,000 or more

Include in Appendix A, Notice of Requirement for Affirmative Action to Ensure Equal Employment Opportunity, the goals established by the Office of Federal Contract Compliance Programs (OFCCP) for minority and female participation in each craft on all contracts and subcontracts.

APPENDIX A (EO 11246)

The OFCCP goals for minority representation in each trade are shown below. The goal for female utilization (6.9 percent) applies to all contracts and subcontracts irrespective of their geographical location.

COUNTY	GOAL	COUNTY	GOAL	COUNTY	GOAL
Beaver	12.6	Box Elder	5.1	Cache	5.1
Carbon	5.1	Daggett	5.1	Davis	6.0
Duchesne	5.1	Emery	5.1	Garfield	12.6
Grand	10.2	Iron	12.6	Juab	5.1
Kane	12.6	Millard	5.1	Morgan	5.1
Piute	5.1	Rich	5.1	Salt Lake	6.0
San Juan	10.2	Sanpete	5.1	Sevier	5.1
Summit	5.1	Tooele	6.0	Uintah	5.1
Utah	2.4	Wasatch	5.1	Washington	12.6
Wayne	5.1	Weber	6.0		

These goals are applicable to all contractors' or subcontractors' construction work (whether or not it is Federal or Federally assisted) performed in the covered area.

The Bidder's attention is called to the "Equal Opportunity Clause" (form FHWA 1273- II 1 b, included in this contract) and the "Standard Federal Equal Employment Specifications" set forth in 41 CFR Part 60-4 (incorporated by reference).

Compliance with the Executive Order and the regulations in 41 CFR part 60-4 is based on the implementation of the "Equal Opportunity Clause," specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and the efforts to meet the goals.

Federal Projects With Full Size Plan Sheets

Provide written notification to the Director of the Office of Federal Contract Compliance Programs within 10 working days of award of any construction subcontract in excess of \$10,000 at any tier for construction work under the contract resulting from this solicitation. The notification lists the name, address and telephone number of the subcontractor; employer identification number of the subcontractor; estimated dollar amount of the subcontract; estimated starting and completion dates of the subcontract; and the geographical area in which the subcontract will be performed.

Under Section 303 of EO 11246, only the U. S. Department of Labor (DOL) has the authority to determine compliance with EO 11246 and its implementing regulations. The Federal Highway Administration (FHWA) and the State highway agency (UDOT) do not have independent authority to determine compliance with EO 11246, 41 CFR Chapter 60, or the minority and female participation goals established by the Office of Federal Contract Compliance Programs (OFCCP), pursuant to 41 CFR Chapter 60.

If the State highway agency (UDOT) or the FHWA becomes aware of any possible violations of EO 11246 or 41 CFR Chapter 60, each has the authority and the responsibility to notify the OFCCP.

APPENDIX B

As used in these specifications:

- a. Covered area: The geographical area described in the solicitation from which this contract resulted;
- b. Director: Director, Office of Federal Contract Compliance Programs, United State Department of Labor, or any person to whom the Director delegates authority;
- c. Employer identification number: The Federal Social Security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941.
- d. Minority includes:
 - (i) Black (all persons having origins in any of the black African racial groups not of Hispanic origin);
 - (ii) Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American or other Spanish Culture or origin, regardless of race);
 - (iii) Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands); and
 - (iv) American Indian or Alaskan Native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).

XI. Specific Equal Employment Opportunity Responsibilities

1. General

- a. The State Transportation Agency (STA) and Federal Highway Administration (FHWA) have the authority and the responsibility to ensure compliance with 23 USC Section 140 and Title VI of the Civil Rights Act of 1964, as amended, and related regulations, including 49 CFR Parts 21 and 23, and 23 CFR Parts 200, 230, and 633. Pursuant to this authority, the STA and the FHWA will conduct compliance reviews of contractors on federally funded highway projects to determine compliance with these laws and related regulations. The STA will prepare complete, written reports of findings of the compliance reviews. The FHWA will analyze the reports, and the evidence on which they are based.
- b. A contractor's EO requirements are in the contract provisions referenced in the FHWA-1273 (included herein). These include contractor acceptance of Section II, 1 c, and the obligation of the contractor to comply with specific EO activities at a minimum.
- c. Submit form PR-1391 in July and at other times when such information is required by the STA or the FHWA; and submit other documentation and reports as requested by the STA or the FHWA.

2. Equal Employment Opportunity (EEO)

- a. Where minorities and women have been excluded from certain classifications in a contractor's work force, the EEO affirmative action requirements specified in the contract will be implemented in good faith to provide EEO.
- b. The contractor will use the avenue afforded by the Training Special Provision (included herein) to increase minority and female employment in crafts where they have been underrepresented.

3. Minority and Female Average Availability Percentages – Utah

- a. Average percentages for minority (M) and female (F) availability in each trade, by County, are shown below. Availability is defined as "an estimate of the number of qualified minorities or women available for employment in a given job group."

Federal Projects With Full Size Plan Sheets

COUNTY	M	F	COUNTY	M	F	COUNTY	M	F	COUNTY	M	F
Beaver	6.8	3.0	Box Elder	9.9	5.0	Cache	9.9	5.0	Carbon	12.3	3.0
Daggett	12.3	3.0	Davis	8.9	3.0	Duchesne	12.3	3.0	Emery	15.5	5.0
Garfield	15.5	5.0	Grand	15.5	5.0	Iron	6.8	3.0	Juab	8.2	4.0
Kane	15.5	5.0	Millard	6.8	3.0	Morgan	11.1	3.0	Piute	15.5	5.0
Rich	9.9	5.0	Salt Lake	21.6	5.0	San Juan	15.5	5.0	Sanpete	8.2	4.0
Sevier	15.5	5.0	Summit	11.1	3.0	Tooele	8.2	4.0	Uintah	12.3	3.0
Utah	11.9	4.0	Wasatch	11.1	3.0	Washington	10.0	4.0	Wayne	15.5	5.0
Weber	17.8	5.0									

- b. The use of these average percentages in no way precludes the contractor from performing and documenting good faith efforts to recruit and employ minorities and females.

4. Compliance Determinations

- a. The list below is a set of “Good-Faith Efforts” criterion established in FHWA’s regulatory and policy requirements that may be used to determine a contractor’s good faith efforts:

1. Contractor’s EEO Policy
2. Dissemination of the EEO Policy
3. Authority and Responsibility of EEO Officer
4. Periodic EEO meetings (EEO indoctrination)
5. Notices/posters on bulletin board
6. Advertising as an “EEO Employer”
7. Recruitment – Systematic and direct recruitment efforts with sources likely to yield minorities and women
8. Educate all new supervisors within 30 days of reporting to duty
9. Encourage present employees to refer minorities and women
10. Evaluates the spread of wages to determine whether discrimination exists
11. Investigates all complaints, promptly, and appropriate corrective action is taken
12. Assist in locating, qualifying, and increasing the skills of minorities and women
13. Fully uses training programs and advises employees and applicants of opportunities
14. Minorities and women exist in contractor’s training program
15. Ensure nonsegregated facilities
16. Minorities and women are employed in all occupations, crafts, and job classifications on an equal basis
17. Procedures establishing the monitoring of subcontractors’ compliance with nondiscrimination, EO and EEO obligations

Federal Projects With Full Size Plan Sheets

18. The need for adequate records and reports
 19. Minorities and women reach accumulating work hours expected based on their representation
 20. Ensure a workplace free of harassment, intimidation, and coercion
- b. Affirmative Action is determined based on the evaluation of the contractor's compliance with all of the above good faith efforts and on the contractor's efforts to achieve maximum results from the actions.
 - c. A contractor is in compliance when there is no evidence of discrimination in employment, training, DBE, Indian Preference provisions, equal opportunity requirements, or evidence every good faith effort has been made.
 - d. Include in the EEO Policy a commitment to provide a workplace free of harassment, intimidation, and coercion; ensure the policy is posted on the project bulletin board; ensure foreman and superintendents are trained in prevention of harassment, intimidation, and coercion; and take other affirmative actions as necessary to satisfy the requirements of 41 CFR 60 4.3.7a. At the time annual registration is due, the contractor will acknowledge that they have a workplace free of harassment, intimidation, and coercion.

5. Training Special Provisions

This Training Special Provisions supersedes subparagraph II 6b of the FHWA-1273, and is an implementation of 23 U.S.C.C.140 (a).

Provide training as follows as part of the equal employment opportunity affirmative action program:

Provide on-the-job training aimed at developing full journeymen in the type of trade or job classification involved.

The number of training hours to be trained under the special provision is 1000 (amount to be filled in by the State Highway Department (STA)).

If a portion of the contract work is subcontracted, determine how many, if any, of the trainees are to be trained by the Subcontractor. Make this training special provision applicable to the subcontract. Retain the primary responsibility for meeting the training requirements imposed by this special provision. Where feasible, 25 percent of apprentices or trainees in each occupation will be in their first year of apprenticeship or training.

Distribute the number of trainees among the work classifications on the basis of needs and the availability of journeymen in the various classifications within a

Federal Projects With Full Size Plan Sheets

reasonable area of recruitment. Prior to commencing construction, submit to the State highway agency for approval the number of trainees to be trained in each selected classification and training program to be used. Specify the starting time for training in each of the classifications. The STA gives credit for each trainee employed on the contract work that is currently enrolled or becomes enrolled in an approved program. Reimbursement is made for the trainees as specified in this provision.

Training and upgrading of minorities and women toward journeyman status is a primary objective of this Training Special Provision. Enroll minority trainees and women (e.g., by conducting systematic and direct recruitment through public and private likely to yield minority and women trainees) to the extent that such persons are available within a reasonable area of recruitment. Demonstrate the steps taken to achieve compliance with Federal Projects With Full Size Plan Sheets this Training Special Provision. This training commitment is not intended nor used to discriminate against any applicant for training, whether a member of a minority group or not.

Do not employ a trainee in any classification in which they have successfully completed a training course leading to journeyman status or in which they have been employed as a journeyman. Include appropriate questions in the employee application or by other suitable means to satisfy this requirement. Document the findings in each case. The training program selected, and approved by the STA and the FHWA, establishes the minimum length and type of training for each classification in that program. The STA and the FHWA approves a program if it meets the equal employment opportunity obligations and qualification of the average trainee for journeyman status in the classification concerned by the end of the training period. Furthermore, apprenticeship programs registered with the U.S. Department of Labor, Bureau of Apprenticeship and Training, or with a State apprenticeship agency recognized by the Bureau and training programs approved but not necessarily sponsored by the U.S. Department of Labor, Manpower Administration, Bureau of Apprenticeship and training are considered acceptable if administered in a manner consistent with the equal employment obligations of Federal-aid highway construction contracts. Approval or acceptance of a training program is obtained from the State prior to commencing work on the classification covered by the program.

Provide training in the construction crafts rather than clerk typists or secretarial-type positions. Training is permissible in lower level management positions such as office engineers, estimators, timekeepers, etc., where the training is oriented toward construction applications. Training in the laborer classification if approved by the division office. Some off-site training is permissible as long as the training is an integral part of an approved training program and does not comprise a significant part of the overall training.

Federal Projects With Full Size Plan Sheets

Trainees are paid at least 60 percent of the appropriate minimum journeyman's rate specified in the contract for the first half of the training period, 75 percent for the third quarter of the training period, and 90 percent for the last quarter of the training period, unless apprentices or trainees in an approved existing program are enrolled as trainees on this project. In that case, the appropriate rates approved by the Departments of Labor or Transportation in connection with the existing program will apply to all trainees being trained for the same classification who are covered by this Training Special Provision.

Furnish the trainee a copy of the program to be followed in providing the training. Provide each trainee with a certification showing the type and length of training satisfactorily completed.

Provide for the maintenance of records and furnish periodic reports documenting their performance under this Training Special Provision. UDOT form, Monthly Training Summary satisfies this reporting requirement. Contractor will accomplish entry of this information electronically by entry into PDDBS at least monthly for the duration of the project.

- a. Training Program Description: As part of the Equal Employment Opportunity Affirmative Action Program, the Contractor will provide on-the-job training aimed at developing full journey status in the type of trade or job classification involved. The number of hours of training to be provided under this contract will be as shown on the bid schedule. Apprentices must be enrolled in an Office of Apprenticeship Training Employer and Labor Services (OATELS - formerly BAT) approved program.
- b. **OBJECTIVE**: Training and upgrading of minorities and women toward journey status is the primary objective of this program. The Contractor will enroll minorities and/or women, where possible, and document good faith efforts prior to the hire of non-minority males in order to demonstrate compliance with this Training Special Provision. This training commitment is not intended, and will not be used, to discriminate against any applicant for training, whether a member of a minority group or not.
- c. **PROJECT TRAINING GOAL**: The formula for determining the training goal specified in the Training Special Provision will be as follows:

Federal Projects With Full Size Plan Sheets

DESCRIPTION	SAMPLE				
Engineer's estimate times 33% equals total labor dollars.	\$25,000,000	X	33%	=	\$8,250,000
Total labor \$ divided by \$50/hr equals total labor hours.	\$8,250,000	÷	*\$50/hr	=	165,000 hrs.
Total labor hours times 5% equals project training hours.	165,000 hrs.	X	5%	=	8,250 hrs.

*\$50.00 = labor cost per hour per employee – to be adjusted periodically to accommodate increase in cost.

- e. GENERAL: Prior to beginning construction on the contract, the Contractor will submit Form C-130 (Formerly OJT100) indicating the training program to be used, the number of hours of training to be provided by classification, and the anticipated starting time for training in each selected classification.
- f. Training should begin within 2 weeks of the anticipated start dates of project as outlined on the OJT 100 Form, unless otherwise authorized by the Resident Engineer (RE). Only after submission of documentation by the Contractor and approval by the RE, of efforts made in good faith, will authorization of a delay be made.
- g. The Contractor will review annually the training and promotion potential of minority and women employees and will encourage eligible employees to apply for such training and promotion.
- h. METHOD OF MEASUREMENT: The Contractor will be credited for each approved apprentice/trainee employed on the project and reimbursed on the basis of hours worked in the program to which he/she is indentured, as listed on the certified payrolls, and reported monthly, by the Contractor in the UDOT PDBS Contractor module, OJT Hours Worked screen. There will be no credit for training provided under this section prior to the Contractor's submittal and approval by the RE of the Apprentice/Trainee Certification from the appropriate agency. This certification expires 90 days from the date of issue, and must be renewed by the Contractor in order to keep the apprentice/trainee's hours eligible for reimbursement.
- i. BASIS OF PAYMENT: Payment for contractor participating in the Apprenticeship Training Program will be made at a rate of \$10.00 a hour, 20 hours per week, up to a maximum of 600 hours per project unless otherwise specified in accordance with 5,C of this provision. Payment will be made at the contract unit price of \$10.00 for each hour of approved apprenticeship training actually provided. If the contractor provides training for more than the number of hours

Federal Projects With Full Size Plan Sheets

specified on the bid schedule, the payment of \$10.00 per hour continues to be paid for all hours of training provided, up to a maximum of double the assigned goal. No reimbursement will be provided to the contractor for hours in excess of twice the assigned training goal per project. All reimbursement payments made to the contractor for training must be paid to the agency administering the training program. Certified documentation showing the payment to the training agency is required to be submitted to the UDOT Civil Rights EEO and Labor Specialist when the project is complete.

A contractor will have fulfilled his/her responsibilities under this Training Special Provision if he/she has provided acceptable training to the number of trainees specified on the C-130 (Formerly OJT100) and the number of hours specified and shown on the bid schedule. EXAMPLE (a): Training Goal = 750 hours; Hours specified on bid schedule = 750. Contractor may use any number of trainees to satisfy the number of hours specified on the bid schedule but the number of trainees specified on the Form C-130 (Formerly OJT100) must be used unless change is approved by RE. EXAMPLE (b): Training Goal = 2000 hours; Hours specified on bid schedule = 2,000. Contractor may use any number of trainees to satisfy the number of hours specified on the bid schedule.

Any request for adjustment to the OJT Training Form or goal MUST be submitted and approved by the UDOT Civil Rights Office prior to substantial completion of project. Good Faith Efforts and mitigating circumstances will be considered in approval process.

DISINCENTIVES: Where the Contractor has failed, by the end of the project, to provide the required number of hours of training and has failed to submit acceptable good faith efforts documentation which establishes exactly why he/she was unable to do so, the Contractor will be assessed an amount equal to the following disincentives to be deducted from the final progress payment:

Federal Projects With Full Size Plan Sheets

DESCRIPTION	SAMPLE				
Number of hours of training not provided, times the journey worker hourly scale plus benefits	HOURS OF TRAINING NOT PROVIDED	*JOURNEY WORKER	BASE PLUS FRINGE	TOTAL HOURLY WAGE OF TRAINEE	DISINCENTIVES
	600	OPERATOR – Blade Smooth/Finish	23.80 + 9.76	= 33.56	20,136.00
	500	CARPENTER	16.13 + 2.80	= 18.93	9,465.00
	600	IRONWORKER	21.84 + 9.92	= 31.76	19,056.00
	700	OPERATOR – Bulldozer	18.05 + 7.08	= 25.13	17,591.00
Total training hours not provided	2,400	Project Total Disincentives			66,248.00

*The journey worker scale is based on the classification identified in the approved programs submitted previously on the form C-130 (Formerly OJT100).

XII. Title VI Appendix A and E

Title VI of the Civil Rights Act of 1964 – Non – Discrimination Notice; Attachment A

NON-DISCRIMINATION NOTICE

In accordance with Title VI of the Civil Rights Act of 1964, 78 Stat. 252, 42 U.S.C 2000d to 2000d-4 and the Title 49, Code of Federal Regulations. The text below, in its entirety, is in all contracts entered into by UDOT. All of the text except the final section, entitled "Incorporation of Provisions," should be included in any contract entered into by any UDOT contractor.

During the performance of this contract, for itself, its assignees and successors in interest (hereinafter referred to as the "contractor") agrees as follows:

A. COMPLIANCE WITH TITLE VI OF THE CIVIL RIGHTS ACT OF 1964 FOR FEDERAL-AID CONTRACTS

- 1. Compliance with Regulations:** The contractor shall comply with the Regulation relative to nondiscrimination in Federally-assisted programs of the Department of Transportation (hereinafter, "DOT") Title 49, Code of Federal Regulations, Part 21, as they may be amended from time to time, (hereinafter referred to as Regulations), which are herein incorporated by reference and made a part of this contract.
- 2. Nondiscrimination:** The Contractor, with regard to the work performed by it during the contract, shall not discriminate on the grounds of race, color, sex, age, disability, income status, or national origin in the selection and retention of subcontractors, including procurements of materials and leases of equipment. The contractor shall not participate either directly or indirectly in the discrimination prohibited by section 21.5 of the Regulations, including employment practices when the contract covers a program set forth in Appendix B of the Regulations.
- 3. Solicitations for Subcontractors, Including Procurements of Materials and Equipment:** In all solicitations either by competitive bidding or negotiation made by the contractor for work to be performed under a subcontract, including procurements of materials or leases of equipment, each potential subcontractor or supplier shall be notified by the contractor of the contractor's obligations under this contract and the Regulations relative to nondiscrimination on the grounds of race, color, sex, age, disability, income status, or national origin.

Federal Projects With Full Size Plan Sheets

- 4. Information and Reports:** The contractor shall provide all information and reports required by the Regulations or directives issued pursuant thereto, and shall permit access to its books, records, accounts, other sources of information, and its facilities as may be determined by the (Recipient) or the (Name of Appropriate Administration) to be pertinent to ascertain compliance with such Regulations, orders and instructions. Where any information required of a contractor is in the exclusive possession of another who fails or refuses to furnish this information the contractor shall so certify to the (Recipient), or the (Name of Appropriate Administration) as appropriate, and shall set forth what efforts it has made to obtain the information.
- 5. Sanctions for Noncompliance:** In the event of the contractor's noncompliance with the nondiscrimination provisions of this contract, the (Recipient) shall impose such contract sanctions as it or the (Name of Appropriate Administration) may determine to be appropriate, including, but not limited to:

 - a. Withholding of payments to the contractor under the contract until the contractor complies, and/or
 - b. Cancellation, termination or suspension of the contract, in whole or in part.
- 6. Incorporation of Provisions:** The contractor shall include the provisions of paragraphs (1) through (6) in every subcontract, including procurements of materials and leases of equipment, unless exempt by the Regulations, or directives issued pursuant thereto.

The contractor shall take such action with respect to any subcontractor procurement as the (Recipient) or the (Name of Appropriate Administration) may direct as a means of enforcing such provisions including sanctions for noncompliance: Provided, however, that, in the event a contractor becomes involved in, or is threatened with litigation with a subcontractor or supplier as a result of such direction, the contractor may request the (Recipient) to enter into such litigation to protect the interests of the (Recipient), and, in addition, the contractor may request the United States to enter into such litigation to protect the interests of the United States.

Federal Projects With Full Size Plan Sheets

Title VI of the Civil Rights Act of 1964 – Non – Discrimination Notice; Attachment E

During the performance of this contract, the contractor, for itself, its assignees, and successors in interest (hereinafter referred to as the "contractor") agrees to comply with the following non-discrimination statutes and authorities; including but not limited to:

Pertinent Non-Discrimination Authorities:

- Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000d *et seq.*, 78 stat. 252), (prohibits discrimination on the basis of race, color, national origin); and 49 CFR Part 21.
- The Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, (42 U.S.C. § 4601), (prohibits unfair treatment of persons displaced or whose property has been acquired because of Federal or Federal-aid programs and projects);
- Federal-Aid Highway Act of 1973, (23 U.S.C. § 324 *et seq.*), (prohibits discrimination on the basis of sex);
- Section 504 of the Rehabilitation Act of 1973, (29 U.S.C. § 794 *et seq.*), as amended, (prohibits discrimination on the basis of disability); and 49 CFR Part 27;
- The Age Discrimination Act of 1975, as amended, (42 U.S.C. § 610 *let seq.*), (prohibits discrimination on the basis of age);
- Airport and Airway Improvement Act of 1982, (49 USC § 471, Section 47123), as amended, (prohibits discrimination based on race, creed, color, national origin, or sex);
- The Civil Rights Restoration Act of 1987, (PL 100-209), (Broadened the scope, coverage and applicability of Title VI of the Civil Rights Act of 1964, The Age Discrimination Act of 1975 and Section 504 of the Rehabilitation Act of 1973, by expanding the definition of the terms "programs or activities" to include all of the programs or activities of the Federal-aid recipients, sub-recipients and contractors, whether such programs or activities are Federally funded or not);
- Titles II and III of the Americans with Disabilities Act, which prohibit discrimination on the basis of disability in the operation of public entities, public and private transportation systems, places of public accommodation, and certain testing entities (42 U.S.C. §§ 12131 – 12189) as implemented by Department of Transportation regulations at 49 C.F.R. parts 37 and 38;
- The Federal Aviation Administration's Non-discrimination statute (49 U.S.C. §47123) (prohibits discrimination on the basis of race, color, national origin, and sex);
- Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, which ensures discrimination against minority populations by discouraging programs, policies, and activities with disproportionately high and adverse human health or environmental effects on minority and low-income populations;
- Executive Order 13166, Improving Access to Services for Persons with Limited English Proficiency, and resulting agency guidance, national origin discrimination includes discrimination because of limited English proficiency (LEP). To ensure compliance with Title VI, you must take reasonable steps to ensure that LEP persons have meaningful access to your programs (70 Fed. Reg. at 74087 to 74100);
- Title IX of the Education Amendments of 1972, as amended, which prohibits you from discriminating because of sex in education programs or activities (20 U.S.C. 1681 *et seq.*).

XIII. Required Contract Provisions FEDERAL-AID CONSTRUCTION CONTRACTS

- I. General
- II. Nondiscrimination
- III. Nonsegregated Facilities
- IV. Davis-Bacon and Related Act Provisions
- V. Contract Work Hours and Safety Standards Act Provisions
- VI. Subletting or Assigning the Contract
- VII. Safety: Accident Prevention
- VIII. False Statements Concerning Highway Projects
- IX. Implementation of Clean Air Act and Federal Water Pollution Control Act
- X. Compliance with Governmentwide Suspension and Debarment Requirements
- XI. Certification Regarding Use of Contract Funds for Lobbying

ATTACHMENTS

- A. Employment and Materials Preference for Appalachian Development Highway System or Appalachian Local Access Road Contracts (included in Appalachian contracts only)

I. GENERAL

1. Form FHWA-1273 must be physically incorporated in each construction contract funded under Title 23 (excluding emergency contracts solely intended for debris removal). The contractor (or subcontractor) must insert this form in each subcontract and further require its inclusion in all lower tier subcontracts (excluding purchase orders, rental agreements and other agreements for supplies or services).

The applicable requirements of Form FHWA-1273 are incorporated by reference for work done under any purchase order, rental agreement or agreement for other services. The prime contractor shall be responsible for compliance by any subcontractor, lower-tier subcontractor or service provider.

Form FHWA-1273 must be included in all Federal-aid design-build contracts, in all subcontracts and in lower tier subcontracts (excluding subcontracts for design services, purchase orders, rental agreements and other agreements for supplies or services). The design-builder shall be responsible for compliance by any subcontractor, lower-tier subcontractor or service provider.

Contracting agencies may reference Form FHWA-1273 in bid proposal or request for proposal documents, however, the Form FHWA-1273 must be physically incorporated (not referenced) in all contracts, subcontracts and lower-tier subcontracts (excluding purchase orders, rental agreements and other agreements for supplies or services related to a construction contract).

2. Subject to the applicability criteria noted in the following sections, these contract provisions shall apply to all work performed on the contract by the contractor's own organization and with the assistance of workers under the contractor's immediate superintendence and to all work performed on the contract by piecework, station work, or by subcontract.
3. A breach of any of the stipulations contained in these Required Contract Provisions may be sufficient grounds for withholding of progress payments, withholding of final payment, termination of the contract, suspension / debarment or any other action determined to be appropriate by the contracting agency and FHWA.
4. Selection of Labor: During the performance of this contract, the contractor shall not use convict labor for any purpose within the limits of a construction project on a Federal-aid highway unless it is labor performed by convicts who are on parole, supervised release, or probation. The term Federal-aid highway does not include roadways functionally classified as local roads or rural minor collectors.

Federal Projects With Full Size Plan Sheets

II. NONDISCRIMINATION

The provisions of this section related to 23 CFR Part 230 are applicable to all Federal-aid construction contracts and to all related construction subcontracts of \$10,000 or more. The provisions of 23 CFR Part 230 are not applicable to material supply, engineering, or architectural service contracts.

In addition, the contractor and all subcontractors must comply with the following policies: Executive Order 11246, 41 CFR 60, 29 CFR 1625-1627, Title 23 USC Section 140, the Rehabilitation Act of 1973, as amended (29 USC 794), Title VI of the Civil Rights Act of 1964, as amended, and related regulations including 49 CFR Parts 21, 26 and 27; and 23 CFR Parts 200, 230, and 633.

The contractor and all subcontractors must comply with: the requirements of the Equal Opportunity Clause in 41 CFR 60-1.4(b) and, for all construction contracts exceeding \$10,000, the Standard Federal Equal Employment Opportunity Construction Contract Specifications in 41 CFR 60-4.3.

Note: The U.S. Department of Labor has exclusive authority to determine compliance with Executive Order 11246 and the policies of the Secretary of Labor including 41 CFR 60, and 29 CFR 1625-1627. The contracting agency and the FHWA have the authority and the responsibility to ensure compliance with Title 23 USC Section 140, the Rehabilitation Act of 1973, as amended (29 USC 794), and Title VI of the Civil Rights Act of 1964, as amended, and related regulations including 49 CFR Parts 21, 26 and 27; and 23 CFR Parts 200, 230, and 633.

The following provision is adopted from 23 CFR 230, Appendix A, with appropriate revisions to conform to the U.S. Department of Labor (US DOL) and FHWA requirements.

1. **Equal Employment Opportunity:** Equal employment opportunity (EEO) requirements not to discriminate and to take affirmative action to assure equal opportunity as set forth under laws, executive orders, rules, regulations (28 CFR 35, 29 CFR 1630, 29 CFR 1625-1627, 41 CFR 60 and 49 CFR 27) and orders of the Secretary of Labor as modified by the provisions prescribed herein, and imposed pursuant to 23 U.S.C. 140 shall constitute the EEO and specific affirmative action standards for the contractor's project activities under this contract. The provisions of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.) set forth under 28 CFR 35 and 29 CFR 1630 are incorporated by reference in this contract. In the execution of this contract, the contractor agrees to comply with the following minimum specific requirement activities of EEO:
 - a. The contractor will work with the contracting agency and the Federal Government to ensure that it has made every good faith effort to provide equal opportunity with respect to all of its terms and conditions of employment and in their review of activities under the contract.
 - b. The contractor will accept as its operating policy the following statement:

"It is the policy of this Company to assure that applicants are employed, and that employees are treated during employment, without regard to their race, religion, sex, color, national origin, age or disability. Such action shall include: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship, pre-apprenticeship, and/or on-the-job training."
2. **EEO Officer:** The contractor will designate and make known to the contracting officers an EEO Officer who will have the responsibility for and must be capable of effectively administering and promoting an active EEO program and who must be assigned adequate authority and responsibility to do so.
3. **Dissemination of Policy:** All members of the contractor's staff who are authorized to hire, supervise, promote, and discharge employees, or who recommend such action, or who are substantially involved in such action, will be made fully cognizant of, and will implement, the contractor's EEO policy and contractual responsibilities to provide EEO in each grade and classification of employment. To ensure that the above agreement will be met, the following actions will be taken as a minimum:
 - a. Periodic meetings of supervisory and personnel office employees will be conducted before the start of work and then not less often than once every six months, at which time the

Federal Projects With Full Size Plan Sheets

contractor's EEO policy and its implementation will be reviewed and explained. The meetings will be conducted by the EEO Officer.

- b. All new supervisory or personnel office employees will be given a thorough indoctrination by the EEO Officer, covering all major aspects of the contractor's EEO obligations within thirty days following their reporting for duty with the contractor.
- c. All personnel who are engaged in direct recruitment for the project will be instructed by the EEO Officer in the contractor's procedures for locating and hiring minorities and women.
- d. Notices and posters setting forth the contractor's EEO policy will be placed in areas readily accessible to employees, applicants for employment and potential employees.
- e. The contractor's EEO policy and the procedures to implement such policy will be brought to the attention of employees by means of meetings, employee handbooks, or other appropriate means.

4. Recruitment: When advertising for employees, the contractor will include in all advertisements for employees the notation: "An Equal Opportunity Employer." All such advertisements will be placed in publications having a large circulation among minorities and women in the area from which the project work force would normally be derived.

- a. The contractor will, unless precluded by a valid bargaining agreement, conduct systematic and direct recruitment through public and private employee referral sources likely to yield qualified minorities and women. To meet this requirement, the contractor will identify sources of potential minority group employees, and establish with such identified sources procedures whereby minority and women applicants may be referred to the contractor for employment consideration.
- b. In the event the contractor has a valid bargaining agreement providing for exclusive hiring hall referrals, the contractor is expected to observe the provisions of that agreement to the extent that the system meets the contractor's compliance with EEO contract provisions. Where implementation of such an agreement has the effect of discriminating against minorities or women, or obligates the contractor to do the same, such implementation violates Federal nondiscrimination provisions.
- c. The contractor will encourage its present employees to refer minorities and women as applicants for employment. Information and procedures with regard to referring such applicants will be discussed with employees.

5. Personnel Actions: Wages, working conditions, and employee benefits shall be established and administered, and personnel actions of every type, including hiring, upgrading, promotion, transfer, demotion, layoff, and termination, shall be taken without regard to race, color, religion, sex, national origin, age or disability. The following procedures shall be followed:

- a. The contractor will conduct periodic inspections of project sites to insure that working conditions and employee facilities do not indicate discriminatory treatment of project site personnel.
- b. The contractor will periodically evaluate the spread of wages paid within each classification to determine any evidence of discriminatory wage practices.
- c. The contractor will periodically review selected personnel actions in depth to determine whether there is evidence of discrimination. Where evidence is found, the contractor will promptly take corrective action. If the review indicates that the discrimination may extend beyond the actions reviewed, such corrective action shall include all affected persons.
- d. The contractor will promptly investigate all complaints of alleged discrimination made to the contractor in connection with its obligations under this contract, will attempt to resolve such complaints, and will take appropriate corrective action within a reasonable time. If the investigation indicates that the discrimination may affect persons other than the complainant, such corrective action shall include such other persons. Upon completion of

Federal Projects With Full Size Plan Sheets

each investigation, the contractor will inform every complainant of all of their avenues of appeal.

6. **Training and Promotion:**

- a. The contractor will assist in locating, qualifying, and increasing the skills of minorities and women who are applicants for employment or current employees. Such efforts should be aimed at developing full journey level status employees in the type of trade or job classification involved.
- b. Consistent with the contractor's work force requirements and as permissible under Federal and State regulations, the contractor shall make full use of training programs, i.e., apprenticeship, and on-the-job training programs for the geographical area of contract performance. In the event a special provision for training is provided under this contract, this subparagraph will be superseded as indicated in the special provision. The contracting agency may reserve training positions for persons who receive welfare assistance in accordance with 23 U.S.C. 140(a).
- c. The contractor will advise employees and applicants for employment of available training programs and entrance requirements for each.
- d. The contractor will periodically review the training and promotion potential of employees who are minorities and women and will encourage eligible employees to apply for such training and promotion.

7. **Unions:** If the contractor relies in whole or in part upon unions as a source of employees, the contractor will use good faith efforts to obtain the cooperation of such unions to increase opportunities for minorities and women. Actions by the contractor, either directly or through a contractor's association acting as agent, will include the procedures set forth below:

- a. The contractor will use good faith efforts to develop, in cooperation with the unions, joint training programs aimed toward qualifying more minorities and women for membership in the unions and increasing the skills of minorities and women so that they may qualify for higher paying employment.
- b. The contractor will use good faith efforts to incorporate an EEO clause into each union agreement to the end that such union will be contractually bound to refer applicants without regard to their race, color, religion, sex, national origin, age or disability.
- c. The contractor is to obtain information as to the referral practices and policies of the labor union except that to the extent such information is within the exclusive possession of the labor union and such labor union refuses to furnish such information to the contractor, the contractor shall so certify to the contracting agency and shall set forth what efforts have been made to obtain such information.
- d. In the event the union is unable to provide the contractor with a reasonable flow of referrals within the time limit set forth in the collective bargaining agreement, the contractor will, through independent recruitment efforts, fill the employment vacancies without regard to race, color, religion, sex, national origin, age or disability; making full efforts to obtain qualified and/or qualifiable minorities and women. The failure of a union to provide sufficient referrals (even though it is obligated to provide exclusive referrals under the terms of a collective bargaining agreement) does not relieve the contractor from the requirements of this paragraph. In the event the union referral practice prevents the contractor from meeting the obligations pursuant to Executive Order 11246, as amended, and these special provisions, such contractor shall immediately notify the contracting agency.

8. **Reasonable Accommodation for Applicants / Employees with Disabilities:** The contractor must be familiar with the requirements for and comply with the Americans with Disabilities Act and all rules and regulations established there under. Employers must provide reasonable accommodation in all employment activities unless to do so would cause an undue hardship.

Federal Projects With Full Size Plan Sheets

- 9. Selection of Subcontractors, Procurement of Materials and Leasing of Equipment:** The contractor shall not discriminate on the grounds of race, color, religion, sex, national origin, age or disability in the selection and retention of subcontractors, including procurement of materials and leases of equipment. The contractor shall take all necessary and reasonable steps to ensure nondiscrimination in the administration of this contract.
- a. The contractor shall notify all potential subcontractors and suppliers and lessors of their EEO obligations under this contract.
 - b. The contractor will use good faith efforts to ensure subcontractor compliance with their EEO obligations.
- 10. Assurance Required by 49 CFR 26.13(b):**
- a. The requirements of 49 CFR Part 26 and the State DOT's U.S. DOT-approved DBE program are incorporated by reference.
 - b. The contractor or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. The contractor shall carry out applicable requirements of 49 CFR Part 26 in the award and administration of DOT-assisted contracts. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as the contracting agency deems appropriate.
- 11. Records and Reports:** The contractor shall keep such records as necessary to document compliance with the EEO requirements. Such records shall be retained for a period of three years following the date of the final payment to the contractor for all contract work and shall be available at reasonable times and places for inspection by authorized representatives of the contracting agency and the FHWA.
- a. The records kept by the contractor shall document the following:
 - (1) The number and work hours of minority and non-minority group members and women employed in each work classification on the project;
 - (2) The progress and efforts being made in cooperation with unions, when applicable, to increase employment opportunities for minorities and women; and
 - (3) The progress and efforts being made in locating, hiring, training, qualifying, and upgrading minorities and women;
 - b. The contractors and subcontractors will submit an annual report to the contracting agency each July for the duration of the project, indicating the number of minority, women, and non-minority group employees currently engaged in each work classification required by the contract work. This information is to be reported on [Form FHWA-1391](#). The staffing data should represent the project work force on board in all or any part of the last payroll period preceding the end of July. If on-the-job training is being required by special provision, the contractor will be required to collect and report training data. The employment data should reflect the work force on board during all or any part of the last payroll period preceding the end of July.

III. NONSEGREGATED FACILITIES

This provision is applicable to all Federal-aid construction contracts and to all related construction subcontracts of \$10,000 or more.

The contractor must ensure that facilities provided for employees are provided in such a manner that segregation on the basis of race, color, religion, sex, or national origin cannot result. The contractor may neither require such segregated use by written or oral policies nor tolerate such use by employee custom. The contractor's obligation extends further to ensure that its employees are not assigned to perform their services at any location, under the contractor's control, where the facilities are segregated. The term

Federal Projects With Full Size Plan Sheets

"facilities" includes waiting rooms, work areas, restaurants and other eating areas, time clocks, restrooms, washrooms, locker rooms, and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing provided for employees. The contractor shall provide separate or single-user restrooms and necessary dressing or sleeping areas to assure privacy between sexes.

IV. DAVIS-BACON AND RELATED ACT PROVISIONS

This section is applicable to all Federal-aid construction projects exceeding \$2,000 and to all related subcontracts and lower-tier subcontracts (regardless of subcontract size). The requirements apply to all projects located within the right-of-way of a roadway that is functionally classified as Federal-aid highway. This excludes roadways functionally classified as local roads or rural minor collectors, which are exempt. Contracting agencies may elect to apply these requirements to other projects.

The following provisions are from the U.S. Department of Labor regulations in 29 CFR 5.5 "Contract provisions and related matters" with minor revisions to conform to the FHWA-1273 format and FHWA program requirements.

1. Minimum wages

- a. All laborers and mechanics employed or working upon the site of the work, will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph 1.d. of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in 29 CFR 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, That the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph 1.b. of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

- b. (1) The contracting officer shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:
 - (i) The work to be performed by the classification requested is not performed by a classification in the wage determination; and
 - (ii) The classification is utilized in the area by the construction industry; and
 - (iii) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

Federal Projects With Full Size Plan Sheets

- (2) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, DC 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.
 - (3) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the contracting officer shall refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Wage and Hour Administrator for determination. The Wage and Hour Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.
 - (4) The wage rate (including fringe benefits where appropriate) determined pursuant to paragraphs 1.b.(2) or 1.b.(3) of this section, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.
- c. Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.
 - d. If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

2. Withholding

The contracting agency shall upon its own action or upon written request of an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract, or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the contracting agency may, after written notice to the contractor, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

Federal Projects With Full Size Plan Sheets

3. Payrolls and basic records

- a. Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.
- b.
 - (1) The contractor shall submit weekly for each week in which any contract work is performed a copy of all payrolls to the contracting agency. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on weekly transmittals. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g. , the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at <http://www.dol.gov/esa/whd/forms/wh347instr.htm> or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the contracting agency for transmission to the State DOT, the FHWA or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the contracting agency.
 - (2) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:
 - (i) That the payroll for the payroll period contains the information required to be provided under §5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under §5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;
 - (ii) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;

Federal Projects With Full Size Plan Sheets

- (iii) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.
 - (3) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph 3.b.(2) of this section.
 - (4) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.
- c. The contractor or subcontractor shall make the records required under paragraph 3.a. of this section available for inspection, copying, or transcription by authorized representatives of the contracting agency, the State DOT, the FHWA, or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the FHWA may, after written notice to the contractor, the contracting agency or the State DOT, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

4. Apprentices and trainees

- a. Apprentices (programs of the USDOL).

Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice.

The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed.

Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination.

Federal Projects With Full Size Plan Sheets

In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

b. Trainees (programs of the USDOL).

Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration.

The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration.

Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed.

In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

c. Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.

d. Apprentices and Trainees (programs of the U.S. DOT).

Apprentices and trainees working under apprenticeship and skill training programs which have been certified by the Secretary of Transportation as promoting EEO in connection with Federal-aid highway construction programs are not subject to the requirements of paragraph 4 of this Section IV. The straight time hourly wage rates for apprentices and trainees under such programs will be established by the particular programs. The ratio of apprentices and trainees to journeymen shall not be greater than permitted by the terms of the particular program.

5. **Compliance with Copeland Act requirements.** The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.

6. **Subcontracts.** The contractor or subcontractor shall insert Form FHWA-1273 in any subcontracts and also require the subcontractors to include Form FHWA-1273 in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.

Federal Projects With Full Size Plan Sheets

7. **Contract termination: debarment.** A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.
8. **Compliance with Davis-Bacon and Related Act requirements.** All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.
9. **Disputes concerning labor standards.** Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.
10. **Certification of eligibility.**
 - a. By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).
 - b. No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).
 - c. The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

V. **CONTRACT WORK HOURS AND SAFETY STANDARDS ACT**

The following clauses apply to any Federal-aid construction contract in an amount in excess of \$100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These clauses shall be inserted in addition to the clauses required by 29 CFR 5.5(a) or 29 CFR 4.6. As used in this paragraph, the terms laborers and mechanics include watchmen and guards.

1. **Overtime requirements.** No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.
2. **Violation; liability for unpaid wages; liquidated damages.** In the event of any violation of the clause set forth in paragraph (1.) of this section, the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (1.) of this section, in the sum of \$10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (1.) of this section.
3. **Withholding for unpaid wages and liquidated damages.** The FHWA or the contacting agency shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (2.) of this section.

Federal Projects With Full Size Plan Sheets

4. **Subcontracts.** The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (1.) through (4.) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (1.) through (4.) of this section.

VI. SUBLETTING OR ASSIGNING THE CONTRACT

This provision is applicable to all Federal-aid construction contracts on the National Highway System.

1. The contractor shall perform with its own organization contract work amounting to not less than 30 percent (or a greater percentage if specified elsewhere in the contract) of the total original contract price, excluding any specialty items designated by the contracting agency. Specialty items may be performed by subcontract and the amount of any such specialty items performed may be deducted from the total original contract price before computing the amount of work required to be performed by the contractor's own organization (23 CFR 635.116).
 - a. The term "perform work with its own organization" refers to workers employed or leased by the prime contractor, and equipment owned or rented by the prime contractor, with or without operators. Such term does not include employees or equipment of a subcontractor or lower tier subcontractor, agents of the prime contractor, or any other assignees. The term may include payments for the costs of hiring leased employees from an employee leasing firm meeting all relevant Federal and State regulatory requirements. Leased employees may only be included in this term if the prime contractor meets all of the following conditions:
 - (1) the prime contractor maintains control over the supervision of the day-to-day activities of the leased employees;
 - (2) the prime contractor remains responsible for the quality of the work of the leased employees;
 - (3) the prime contractor retains all power to accept or exclude individual employees from work on the project; and
 - (4) the prime contractor remains ultimately responsible for the payment of predetermined minimum wages, the submission of payrolls, statements of compliance and all other Federal regulatory requirements.
 - b. "Specialty Items" shall be construed to be limited to work that requires highly specialized knowledge, abilities, or equipment not ordinarily available in the type of contracting organizations qualified and expected to bid or propose on the contract as a whole and in general are to be limited to minor components of the overall contract.
2. The contract amount upon which the requirements set forth in paragraph (1) of Section VI is computed includes the cost of material and manufactured products which are to be purchased or produced by the contractor under the contract provisions.
3. The contractor shall furnish (a) a competent superintendent or supervisor who is employed by the firm, has full authority to direct performance of the work in accordance with the contract requirements, and is in charge of all construction operations (regardless of who performs the work) and (b) such other of its own organizational resources (supervision, management, and engineering services) as the contracting officer determines is necessary to assure the performance of the contract.
4. No portion of the contract shall be sublet, assigned or otherwise disposed of except with the written consent of the contracting officer, or authorized representative, and such consent when given shall not be construed to relieve the contractor of any responsibility for the fulfillment of the contract. Written consent will be given only after the contracting agency has assured that each subcontract is

Federal Projects With Full Size Plan Sheets

evidenced in writing and that it contains all pertinent provisions and requirements of the prime contract.

5. The 30% self-performance requirement of paragraph (1) is not applicable to design-build contracts; however, contracting agencies may establish their own self-performance requirements.

VII. SAFETY: ACCIDENT PREVENTION

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

1. In the performance of this contract the contractor shall comply with all applicable Federal, State, and local laws governing safety, health, and sanitation (23 CFR 635). The contractor shall provide all safeguards, safety devices and protective equipment and take any other needed actions as it determines, or as the contracting officer may determine, to be reasonably necessary to protect the life and health of employees on the job and the safety of the public and to protect property in connection with the performance of the work covered by the contract.
2. It is a condition of this contract, and shall be made a condition of each subcontract, which the contractor enters into pursuant to this contract, that the contractor and any subcontractor shall not permit any employee, in performance of the contract, to work in surroundings or under conditions which are unsanitary, hazardous or dangerous to his/her health or safety, as determined under construction safety and health standards (29 CFR 1926) promulgated by the Secretary of Labor, in accordance with Section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 3704).
3. Pursuant to 29 CFR 1926.3, it is a condition of this contract that the Secretary of Labor or authorized representative thereof, shall have right of entry to any site of contract performance to inspect or investigate the matter of compliance with the construction safety and health standards and to carry out the duties of the Secretary under Section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C.3704).

VIII. FALSE STATEMENTS CONCERNING HIGHWAY PROJECTS

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

In order to assure high quality and durable construction in conformity with approved plans and specifications and a high degree of reliability on statements and representations made by engineers, contractors, suppliers, and workers on Federal-aid highway projects, it is essential that all persons concerned with the project perform their functions as carefully, thoroughly, and honestly as possible. Willful falsification, distortion, or misrepresentation with respect to any facts related to the project is a violation of Federal law. To prevent any misunderstanding regarding the seriousness of these and similar acts, Form FHWA-1022 shall be posted on each Federal-aid highway project (23 CFR 635) in one or more places where it is readily available to all persons concerned with the project:

18 U.S.C. 1020 reads as follows:

"Whoever, being an officer, agent, or employee of the United States, or of any State or Territory, or whoever, whether a person, association, firm, or corporation, knowingly makes any false statement, false representation, or false report as to the character, quality, quantity, or cost of the material used or to be used, or the quantity or quality of the work performed or to be performed, or the cost thereof in connection with the submission of plans, maps, specifications, contracts, or costs of construction on any highway or related project submitted for approval to the Secretary of Transportation; or

Whoever knowingly makes any false statement, false representation, false report or false claim with respect to the character, quality, quantity, or cost of any work performed or to be performed, or materials furnished or to be furnished, in connection with the construction of any highway or related project approved by the Secretary of Transportation; or

Whoever knowingly makes any false statement or false representation as to material fact in any statement, certificate, or report submitted pursuant to provisions of the Federal-aid Roads Act approved July 1, 1916, (39 Stat. 355), as amended and supplemented;

Federal Projects With Full Size Plan Sheets

Shall be fined under this title or imprisoned not more than 5 years or both."

IX. IMPLEMENTATION OF CLEAN AIR ACT AND FEDERAL WATER POLLUTION CONTROL ACT

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

By submission of this bid/proposal or the execution of this contract, or subcontract, as appropriate, the bidder, proposer, Federal-aid construction contractor, or subcontractor, as appropriate, will be deemed to have stipulated as follows:

1. That any person who is or will be utilized in the performance of this contract is not prohibited from receiving an award due to a violation of Section 508 of the Clean Water Act or Section 306 of the Clean Air Act.
2. That the contractor agrees to include or cause to be included the requirements of paragraph (1) of this Section X in every subcontract, and further agrees to take such action as the contracting agency may direct as a means of enforcing such requirements.

X. CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION

This provision is applicable to all Federal-aid construction contracts, design-build contracts, subcontracts, lower-tier subcontracts, purchase orders, lease agreements, consultant contracts or any other covered transaction requiring FHWA approval or that is estimated to cost \$25,000 or more – as defined in 2 CFR Parts 180 and 1200.

1. Instructions for Certification – First Tier Participants:

- a. By signing and submitting this proposal, the prospective first tier participant is providing the certification set out below.
- b. The inability of a person to provide the certification set out below will not necessarily result in denial of participation in this covered transaction. The prospective first tier participant shall submit an explanation of why it cannot provide the certification set out below. The certification or explanation will be considered in connection with the department or agency's determination whether to enter into this transaction. However, failure of the prospective first tier participant to furnish a certification or an explanation shall disqualify such a person from participation in this transaction.
- c. The certification in this clause is a material representation of fact upon which reliance was placed when the contracting agency determined to enter into this transaction. If it is later determined that the prospective participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the contracting agency may terminate this transaction for cause of default.
- d. The prospective first tier participant shall provide immediate written notice to the contracting agency to whom this proposal is submitted if any time the prospective first tier participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
- e. The terms "covered transaction," "debarred," "suspended," "ineligible," "participant," "person," "principal," and "voluntarily excluded," as used in this clause, are defined in 2 CFR Parts 180 and 1200. "First Tier Covered Transactions" refers to any covered transaction between a grantee or subgrantee of Federal funds and a participant (such as the prime or general contractor). "Lower Tier Covered Transactions" refers to any covered transaction under a First Tier Covered Transaction (such as subcontracts). "First Tier Participant" refers to the participant who has entered into a covered transaction with a grantee or subgrantee of Federal funds (such as the prime or general contractor). "Lower Tier Participant" refers any participant who has entered into a covered transaction with a First Tier Participant or other Lower Tier Participants (such as subcontractors and suppliers).

Federal Projects With Full Size Plan Sheets

- f. The prospective first tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency entering into this transaction.
- g. The prospective first tier participant further agrees by submitting this proposal that it will include the clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transactions," provided by the department or contracting agency, entering into this covered transaction, without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions exceeding the \$25,000 threshold.
- h. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant is responsible for ensuring that its principals are not suspended, debarred, or otherwise ineligible to participate in covered transactions. To verify the eligibility of its principals, as well as the eligibility of any lower tier prospective participants, each participant may, but is not required to, check the Excluded Parties List System website (<https://www.epls.gov>), which is compiled by the General Services Administration.
- i. Nothing contained in the foregoing shall be construed to require the establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of the prospective participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
- j. Except for transactions authorized under paragraph (f) of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.

* * * * *

2. Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion – First Tier Participants:

- a. The prospective first tier participant certifies to the best of its knowledge and belief, that it and its principals:
 - (1) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participating in covered transactions by any Federal department or agency;
 - (2) Have not within a three-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;
 - (3) Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph (a)(2) of this certification; and
 - (4) Have not within a three-year period preceding this application/proposal had one or more public transactions (Federal, State or local) terminated for cause or default.

Federal Projects With Full Size Plan Sheets

- b. Where the prospective participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

2. Instructions for Certification - Lower Tier Participants:

(Applicable to all subcontracts, purchase orders and other lower tier transactions requiring prior FHWA approval or estimated to cost \$25,000 or more - 2 CFR Parts 180 and 1200)

- a. By signing and submitting this proposal, the prospective lower tier is providing the certification set out below.
- b. The certification in this clause is a material representation of fact upon which reliance was placed when this transaction was entered into. If it is later determined that the prospective lower tier participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department, or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.
- c. The prospective lower tier participant shall provide immediate written notice to the person to which this proposal is submitted if at any time the prospective lower tier participant learns that its certification was erroneous by reason of changed circumstances.
- d. The terms "covered transaction," "debarred," "suspended," "ineligible," "participant," "person," "principal," and "voluntarily excluded," as used in this clause, are defined in 2 CFR Parts 180 and 1200. You may contact the person to which this proposal is submitted for assistance in obtaining a copy of those regulations. "First Tier Covered Transactions" refers to any covered transaction between a grantee or subgrantee of Federal funds and a participant (such as the prime or general contract). "Lower Tier Covered Transactions" refers to any covered transaction under a First Tier Covered Transaction (such as subcontracts). "First Tier Participant" refers to the participant who has entered into a covered transaction with a grantee or subgrantee of Federal funds (such as the prime or general contractor). "Lower Tier Participant" refers any participant who has entered into a covered transaction with a First Tier Participant or other Lower Tier Participants (such as subcontractors and suppliers).
- e. The prospective lower tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency with which this transaction originated.
- f. The prospective lower tier participant further agrees by submitting this proposal that it will include this clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transaction," without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions exceeding the \$25,000 threshold.
- g. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant is responsible for ensuring that its principals are not suspended, debarred, or otherwise ineligible to participate in covered transactions. To verify the eligibility of its principals, as well as the eligibility of any lower tier prospective participants, each participant may, but is not required to, check the Excluded Parties List System website (<https://www.epls.gov/>), which is compiled by the General Services Administration.
- h. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

Federal Projects With Full Size Plan Sheets

- i. Except for transactions authorized under paragraph e of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.

* * * * *

Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion--Lower Tier Participants:

1. The prospective lower tier participant certifies, by submission of this proposal, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participating in covered transactions by any Federal department or agency.
2. Where the prospective lower tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

* * * * *

XI. CERTIFICATION REGARDING USE OF CONTRACT FUNDS FOR LOBBYING

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts which exceed \$100,000 (49 CFR 20).

1. The prospective participant certifies, by signing and submitting this bid or proposal, to the best of his or her knowledge and belief, that:
 - a. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any Federal agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.
 - b. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any Federal agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
2. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by 31 U.S.C. 1352. Any person who fails to file the required certification shall be subject to a civil penalty of not less than \$10,000 and not more than \$100,000 for each such failure.
3. The prospective participant also agrees by submitting its bid or proposal that the participant shall require that the language of this certification be included in all lower tier subcontracts, which exceed \$100,000 and that all such recipients shall certify and disclose accordingly.

Federal Projects With Full Size Plan Sheets

ATTACHMENT A - EMPLOYMENT AND MATERIALS PREFERENCE FOR APPALACHIAN DEVELOPMENT HIGHWAY SYSTEM OR APPALACHIAN LOCAL ACCESS ROAD CONTRACTS

This provision is applicable to all Federal-aid projects funded under the Appalachian Regional Development Act of 1965.

1. During the performance of this contract, the contractor undertaking to do work which is, or reasonably may be, done as on-site work, shall give preference to qualified persons who regularly reside in the labor area as designated by the DOL wherein the contract work is situated, or the subregion, or the Appalachian counties of the State wherein the contract work is situated, except:
 - a. To the extent that qualified persons regularly residing in the area are not available.
 - b. For the reasonable needs of the contractor to employ supervisory or specially experienced personnel necessary to assure an efficient execution of the contract work.
 - c. For the obligation of the contractor to offer employment to present or former employees as the result of a lawful collective bargaining contract, provided that the number of nonresident persons employed under this subparagraph (1c) shall not exceed 20 percent of the total number of employees employed by the contractor on the contract work, except as provided in subparagraph (4) below.
2. The contractor shall place a job order with the State Employment Service indicating (a) the classifications of the laborers, mechanics and other employees required to perform the contract work, (b) the number of employees required in each classification, (c) the date on which the participant estimates such employees will be required, and (d) any other pertinent information required by the State Employment Service to complete the job order form. The job order may be placed with the State Employment Service in writing or by telephone. If during the course of the contract work, the information submitted by the contractor in the original job order is substantially modified, the participant shall promptly notify the State Employment Service.
3. The contractor shall give full consideration to all qualified job applicants referred to him by the State Employment Service. The contractor is not required to grant employment to any job applicants who, in his opinion, are not qualified to perform the classification of work required.
4. If, within one week following the placing of a job order by the contractor with the State Employment Service, the State Employment Service is unable to refer any qualified job applicants to the contractor, or less than the number requested, the State Employment Service will forward a certificate to the contractor indicating the unavailability of applicants. Such certificate shall be made a part of the contractor's permanent project records. Upon receipt of this certificate, the contractor may employ persons who do not normally reside in the labor area to fill positions covered by the certificate, notwithstanding the provisions of subparagraph (1c) above.
5. The provisions of 23 CFR 633.207(e) allow the contracting agency to provide a contractual preference for the use of mineral resource materials native to the Appalachian region.
6. The contractor shall include the provisions of Sections 1 through 4 of this Attachment A in every subcontract for work which is, or reasonably may be, done as on-site work.

CARGO PREFERENCE ACT (CPA)

DESCRIPTION

The Federal Highway Administration (FHWA) in partnership with the Federal Maritime Administration (MARAD) has mandated the implementation of 46 CFR 381 making the cargo preference requirements applicable to the Federal Aid Highway Program.

The requirements of this Special Provision apply to items transported by ocean vessel.

CONTRACT REQUIREMENTS

A. General

Utilize privately owned United States-flag commercial vessels to ship at least 50 percent of the gross tonnage whenever shipping any equipment, material, or commodities pursuant to this contract, to the extent such vessels are available at fair and reasonable rates for United States-flag commercial vessels. Gross tonnage is computed separately for dry bulk carriers, dry cargo liners, and tankers.

Furnish a legible, English language copy of a rated 'on-board' commercial ocean bill-of-lading for each shipment of cargo described in the previous paragraph. Furnish the bill-of-lading within 20 days following the date of loading for shipments originating in the United States and within 30 working days following the date of loading from shipments originating outside the United States.

Furnish bills-of-lading to the Engineer and to the following:

Division of National Cargo
Office of Market Development
Maritime Administration
Washington, DC 20590

B. Subcontracts

Include the language in Section "A, General" of this Special Provision in all subcontracts issued pursuant to this contract.

Publication Date: 01/08/2016

Counties: SUMMIT, UT

Note: Under Executive Order (EO) 13658, an hourly minimum wage of \$10.15 for calendar year 2016 applies to all contracts subject to the Davis-Bacon Act for which the solicitation was issued on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least \$10.15 (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2016. The EO minimum wage rate will be adjusted annually. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

GENERAL DECISION FILE FOR PROJECTS REPORT

Date: 11/22/2016

Project #: F-0248(16)3

General Decision #: UT20160088

Modification: 0

Publication Date: 01/08/2016

Counties: WASATCH, UT

Note: Under Executive Order (EO) 13658, an hourly minimum wage of \$10.15 for calendar year 2016 applies to all contracts subject to the Davis-Bacon Act for which the solicitation was issued on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least \$10.15 (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2016. The EO minimum wage rate will be adjusted annually. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Contractor Code		Hourly Rate	Fringes
Designation: SUUT2008-072			
Survey Date: 9/10/2008 00:00:C			
140018	LABORER: Fence Erector	\$12.47	2.84

150190	TRUCK DRIVER (Water, Fuel & Oil Tank) less than 1,200 gal	\$20.64	10.73

Note: Executive Order (EO) 13658 establishes an hourly minimum wage of \$10.10 for 2015 that applies to all contracts subject to the Davis-Bacon Act for which the solicitation is issued on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least \$10.10 (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract. The EO minimum wage rate will be adjusted annually. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

=====

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of "identifiers" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than "SU" or "UAVG" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the "SU" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- * an existing published wage determination
- * a survey underlying a wage determination
- * a Wage and Hour Division letter setting forth a position on a wage determination matter
- * a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

=====

END OF GENERAL DECISION

XV. Special Provisions and Supplemental Specifications

**Supplemental Specification
2012 Standard Specification Book**

SECTION 00120M

BIDDING REQUIREMENTS AND CONDITIONS

Delete Article 1.6, paragraph A and replace with the following:

- A. Meet Department requirements for prequalification before submitting a proposal on all projects where the Department Engineer's advertised estimate is greater than or equal to \$3 million.
 - 1. Prequalification information is due at least 10 calendar days before submitting a proposal on projects requiring prequalification.

Delete Article 1.15, paragraph A20 and replace with the following:

- 20. Unsatisfactory performance on previous or current contracts or serving probation for actions on another project.

Delete Article 1.15, paragraph B and replace with the following:

- B. The bidder may appeal in writing to the Department Deputy Director according to Utah Code Section 63G-6-801 through 806, as amended if the Department refuses to accept a proposal for any of the foregoing reasons.

Delete Article 1.17 and replace with the following:

1.17 PROPOSAL DELIVERY

- A. Electronically transmit the proposal before the time specified in the Notice to Contractors.
- B. A manually submitted bid must include both a signed hard copy and electronic version. Electronic media device (CD/Flash Drive) must not be blank or unreadable and must contain the correct electronic bid items txt file in the indicated format.
 - 1. File format- Proj#_UDOTContractorID_bidopendate.txt
 - 2. The signed hard copy takes precedence over a manually delivered electronic version in the case of discrepancies or initialed changes to unit prices or DBE commitment.

Delete Article 1.18 and replace with the following:

1.18 WITHDRAWING OR REVISING PROPOSALS

- A. A proposal may be withdrawn or revised before the time set for receiving proposals.
- B. Provide the request for withdrawal to the Department with a telephone call followed by documented electronic communications including a company authorized signature and the UDOT Contractor ID before the time set for receiving proposals.
- C. Revise and save bid proposal using the current version of the Department's Electronic Bid System. Transmit to Department authorized repository before the time set for receiving proposals.

Delete Article 1.20 and replace with the following:

1.20 SUSPENSION

- A. A Contractor will be placed on suspension if its contractor ratings performed by the Department do not meet the minimum standard outlined in the contractor rating process for any Department or Department administered projects.
 - 1. The Contractor will not be allowed to bid on Department or Department administered projects while on suspension.

Add Article 1.21, paragraph A14

- 14. Contractor ratings performed by the Department do not meet the minimum standard outlined in the contractor rating process.

Add Article 1.27:

1.27 PUBLIC OPENING OF PROPOSALS

- A. Proposals are publicly opened at the time indicated in the invitation for bids.

Add Article 1.28:

1.28 CONTRACTOR LICENSING

- A. Apply and conform to the laws of Utah relative to the licensing of contractors.
 - 1. A contractor's license is required before submitting a bid.
Exception: A Contractor may submit a bid on a Federal-aid highway project if they can become licensed in Utah before beginning construction (notice to proceed).
 - 2. Failure to do so will result in forfeiture of award.

- B. Obtain a commercial license to perform work in Utah.
 - 1. A license will be required to proceed with work.
 - 2. All license requirements and application to perform heavy highway construction in the state of Utah requires the applicable license for the category of work being performed.
 - a. The Prime contractor is required to hold an E-100 classification title/code or the applicable license relating to their specific category of work being performed.
 - b. A Sub-contractor is required to hold the applicable license relating to their specific category of work being performed.
Licensing is governed by:

Utah Department of Commerce
Occupational/Professional Licensing
P O Box 145741
Salt Lake City, UT 84114-6741
(801)530-6628

July 8, 2015

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 00221S

BIDDING CONTRACT TIME

Add Section 00221

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Procedures for bidding contract time for the Price + Time bidding process.
 - 1. Includes incentive/disincentive for early/late completion of project milestones.
- B. Description of time component pricing, and time related incentive or disincentive.
 - 1. Refer to Section 00515M for information regarding bidding time and determination of the low bidder.
 - 2. Time is a bid item that captures societal costs and is used for evaluation of the low bidder. Incentive/Disincentive is the only time related payment. Refer to this Section, article 1.7.

1.2 RELATED SECTIONS

- A. Section 00515M: Contract Award And Execution
- B. Section 00555: Prosecution and Progress

1.3 REFERENCES Not Used

1.4 DEFINITIONS Not Used

1.5 SUBMITTALS Not Used

1.6 TIME COMPONENT

- A. Determine the bid price for the time component as follows.
 - 1. Measure contract time in calendar days.
 - 2. Determine the number of consecutive calendar days required between each start milestone and finish milestone in Table 1.
 - a. Consider all requirements of the contract when determining the number of calendar days,
 - b. Include the days of the start milestone and finish milestone in the number of calendar days.
- B. The Department does not guarantee that any milestone can be completed in the minimum calendar days shown in Table 1.
- C. Bidders are responsible to complete the milestones within the time bid and according to project requirements.
- D. The Department will consider the bid non-responsive if the bidder:
 - 1. Does not submit a bid for the time component.
 - 2. Submits a time component bid for any awardable portion of the contract which is outside the minimum or maximum range.
- E. Negative amounts are not permitted for time related bid items.
- F. Time is bid in calendar days. Consider seasonal project specific weather conditions during bid preparation.

Table 1

Determination of Calendar Days						
A	B	C	D	E	F	G
TIME SEGMENT	START MILESTONE	FINISH MILESTONE	TIME-RELATED COST-RATE	TIME-RELATED COST-RATE METHOD	MIN	MAX
			Dollars per Calendar Day	User Cost or Liquidated Damages	Calendar Days	Calendar Days
1	May 1, 2017	Substantial Completion	\$2,130	Liquidated Damages	100	120

1.7 INCENTIVES/DISINCENTIVES RELATED TO “TIME”

- A. Contract time related charges are determined by multiplying the number of calendar days accrued for each time segment by its corresponding time related cost rate and summing the products.
- B. Document accrued time charges per time segment for the duration of the project.
- C. Payments or deductions to the Contractor will be based on the difference between the time related bid amounts and the actual time charges assessed for the completed project.
 - 1. Payment for the incentive will be made in the project accounting system after substantial completion.
 - 2. Deduction for any milestone disincentive will be made on the first progress payment after the total number of calendar days bid for a milestone has passed without completion as defined in Table 1.
- D. Incentive
 - 1. The Contractor is eligible for incentive when a milestone is achieved before the number of calendar days bid as determined by the Department.
 - 2. Payment is made at the rate shown in column D for the difference between the number of calendar days bid and the actual number of calendar days used to achieve the milestone when Column E is defined as “User Cost.”
 - 3. Payment is made at the rate shown in the schedule of liquidated damages in Section 00555 based on the original contract amount when Column E is defined as “Liquidated Damages.”
 - 4. The maximum dollar amount eligible for incentive payment for all combined milestones is \$ 21,300.
- E. Disincentive
 - 1. When the time related cost in Column E is defined as “User Cost.”
 - a. The Contractor is assessed a disincentive when a milestone is not achieved within the number of calendar days bid as determined by the Department.
 - b. Disincentive is assessed at the rate shown in column D for the difference between the number of calendar days bid and the actual number of calendar days used to achieve the milestone.
 - c. There is no maximum dollar amount for disincentive charges.
 - d. Liquidated damages are charged in addition to disincentive for the difference between the maximum calendar days and the actual number of days to achieve the milestone if

milestone completion is not achieved prior to the maximum calendar days shown in Table 1. Refer to Section 00555.

2. When the time related cost in Column E is defined as “Liquidated Damages.”
 - a. The Contractor is assessed disincentive at the rate shown in the schedule of liquidated damages in Section 00555 based on the original contract amount.
 - b. Disincentive is assessed for the difference between the number of calendar days bid and the actual number of calendar days used to achieve the milestone.
 - c. Disincentive applies until milestone completion or the maximum calendar days defined in Column G, whichever occurs first.

F. Liquidated Damages

1. Liquidated damages are assessed according to Section 00555 for the difference between the number of maximum calendar days from Column G and the actual number of calendar days used to achieve the milestone.

G. Timeline of Incentive, Disincentive, and Liquidated Damages

1. Refer to Figure 1

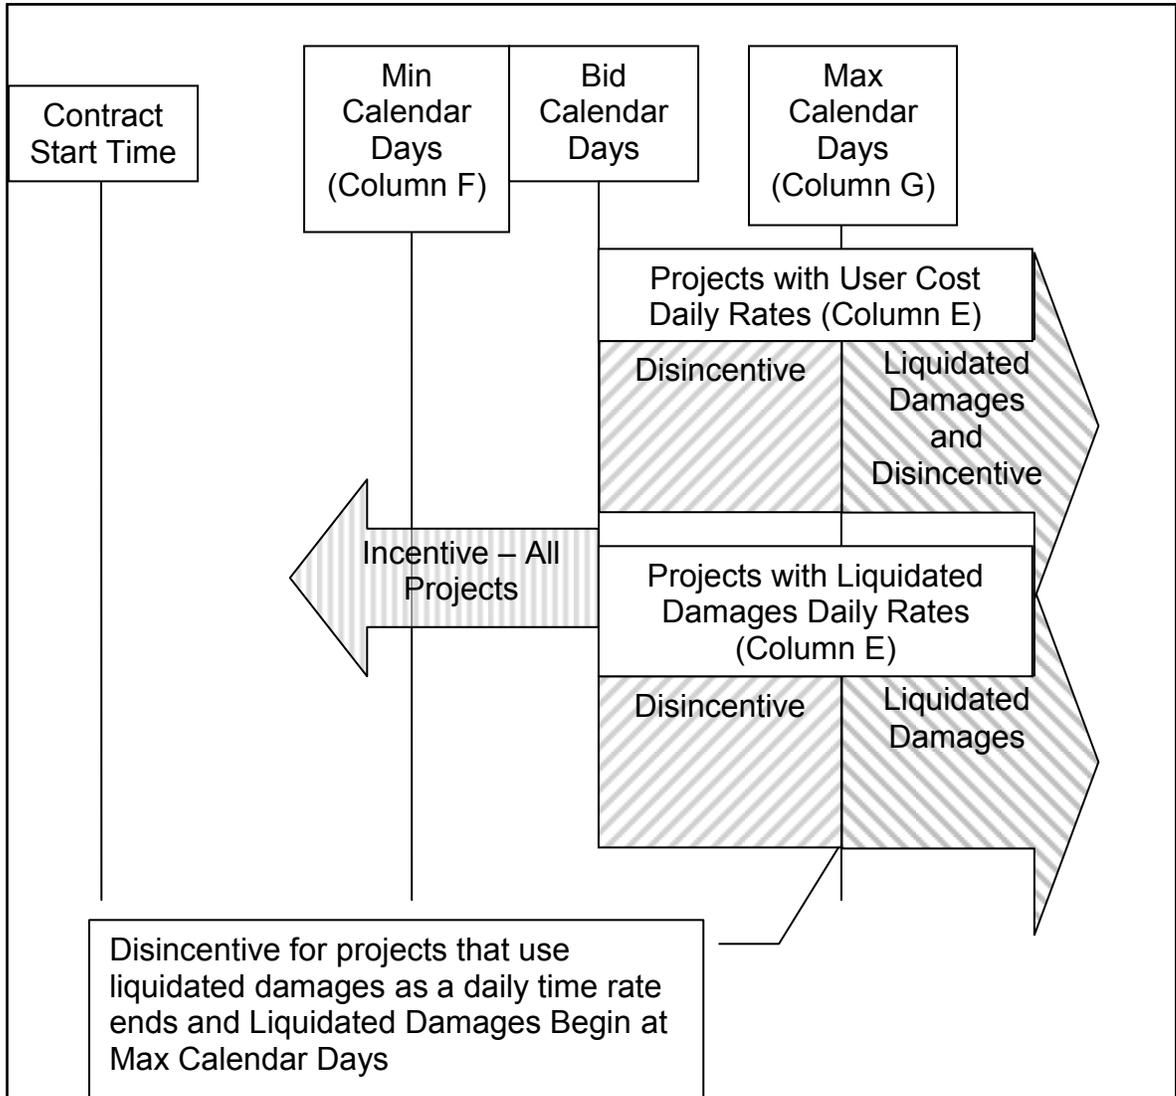

Figure 1 – Timeline of Incentive, Disincentive, and Liquidated Damages

PART 2 PRODUCTS Not Used

PART 3 EXECUTION Not Used

END OF SECTION

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 00515M

CONTRACT AWARD AND EXECUTION

Delete Article 1.6 and replace with the following:

1.6 PROPOSAL CONSIDERATION

- A. This project uses a price + time or price + time + lane rental bidding process. These processes provide:
 - 1. For the determination of the low bidder based on the price of construction plus the costs associated with contract time and lane rental.
 - 2. An incentive/disincentive for completion of project time-related milestones based on durations established by Contractor bid as applicable.
 - 3. An incentive/disincentive for minimizing duration of lane and shoulder closures based on durations established by Contractor bid as applicable.

- B. The Department publicly opens properly executed proposals using the current version of the Electronic Bid System (EBS) to compare bids on the basis of the summation of the products of the quantities and the unit bid prices.
 - 1. The Department makes the results of the comparisons available to the public.
 - 2. The unit bid prices govern if a discrepancy exists between unit bid prices and extensions.

- C. The Department reserves the right to reject any or all proposals, waive technicalities, or advertise for new proposals.

- D. The bidder can request withdrawal of a bid after bid opening by:
 - 1. Submitting to the Director for Construction and Materials a notarized affidavit within 24 hours after bid opening declaring a clerical or mathematical error in bid preparation.
 - 2. Submitting accompanying declaration with original work sheets used in bid preparation.
 - 3. Describing specific errors in detail.

4. Verifying that error has a significant monetary effect in the amount of 3 percent of the bid or greater.
- E. The bidder may not request bid withdrawal for judgmental errors.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 00515M

CONTRACT AWARD AND EXECUTION

Delete Article 1.11, paragraph A and replace with the following:

- A. The awarded Contractor must return the signed contracts, properly executed contract bonds, National Safety Rating Scores, and all required insurances to the Department within 20 calendar days after notice of award.
 - 1. The bidder can withdraw the proposal without penalty if the Department does not execute the contract within 30 calendar days after receiving requisite signed contracts, bonds, and insurances.
 - 2. The contract is not considered in effect until executed by all parties.

Delete Article 1.11, paragraph B and replace with the following:

- B. **Qualified Health Benefit Plan**
The Department will issue a Notice to Proceed after the Contractor demonstrates that an offer of qualified health insurance coverage has been or will be maintained for the employees and their dependents for the duration of any contract entered between the Department and the Contractor.
 - 1. Provide certification of equivalency to a “qualified health insurance” plan as required by Utah Code 72-6-107.5.
 - 2. Demonstrate compliance of this requirement before the Notice of Proceed or approval to sublet work. Refer to <http://www.udot.utah.gov/go/standardsreferences> for guidance on this process for Qualified Health Insurance Coverage.
 - 3. Failure to demonstrate compliance of this requirement may result in cancellation of the contract.
 - 4. Provide two statements to “demonstrate” compliance. Statements need to be signed originals and on company letterhead. Separate letters for each subsidiary, contracting with Department, are required.
 - a. Provide an original signed statement from the Contractor stating that they will maintain an offer of Qualified Health Insurance coverage as required by Utah Code 72-6-107.5 for the duration of any contract between Contractor and UDOT.

- b. Provide a written statement of actuarial equivalency from:
- 1) The Utah Insurance Department;
 - 2) An actuary selected by the contractor or the contractor's insurer; or
 - 3) An underwriter who is responsible for developing the employer group's premium rates.

November 1, 2016

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 00555M

PROSECUTION AND PROGRESS

Delete Article 1.7 and replace with the following:

1.7 NOTICE TO PROCEED

- A. Proceed with work after receipt of written notice from the department.
- B. Work will begin on Monday, May 1, 2017.
- C. Notify the Engineer at least two weeks before beginning work.

Delete Article 1.11 and replace with the following:

- A. Minimize interference with traffic during performance of the work.
- B. Holiday and Sunday Work:
 - 1. Do not perform any work without written approval except for repairing or servicing equipment, protecting work, maintaining or curing concrete, and maintaining traffic on Category II holidays as defined in Section 00570. Including the following holidays:
 - Memorial Day - from 3 p.m. Friday, May 26th to 5 a.m. Tuesday, May 30th.
 - Fourth of July - from 3 p.m. Friday, June 30th to 5 a.m. Wednesday, July 5th.
 - Pioneer Day - from 3 p.m. Friday, July 21st to 5 a.m. Tuesday, July 25th.
 - Labor Day - from 3 p.m. Friday, September 1st to 5 a.m. Tuesday, September 5th.
 - 2. Provide notice to the Engineer before 12:00 noon the Wednesday before any Sunday or Category I holiday work as defined in Section 00570, unless otherwise restricted in the contract.
- C. Night work:

1. Night work is not permitted. Work must take place between Sunrise and Sunset.
- D. The Contractor is responsible to obtain all permits required to perform the work.
- E. Traffic Limitations:
1. See below for SR-248 lane closure limitations.
 - a. Segment 1 - SR-248; MP 3.19 to 3.55
 - 1) Area 1: MP 3.19 to MP 3.30 – Maintain one lane each direction Monday – Friday. Saturday and Sunday all lanes open.
 - 2) Area 2: MP 3.30 to 3.55 – one way flagging from 7:00 AM to 9:00 PM for **one consecutive** Saturday and Sunday.
 - b. Segment 2 - SR-248; MP 3.55 to 6.20 (CTAB)
 - 1) Area 3: Maintain one lane open each direction for 8 continuous weeks, after 8 continuous weeks all lanes open. Failure of the Contractor to cease work and open the traffic lanes to traffic as specified in this article will result in a price adjustment per Section 01554, article 1.12, paragraph B.
 - c. Segment 3 – SR-248; MP 6.20 to 14.48
 - 1) Area 4: MP 6.20 to 12.72 – Maintain one lane each direction Monday – Friday. Saturday and Sunday all lanes open.
 - 2) Area 5: MP 12.72 to 14.48 – One way flagging from 8:00 AM to 4:00 PM, Monday – Friday. One lane each direction from 4:00 PM to Sunset, Monday – Friday. Saturday and Sunday all lanes open. Allow for two full night closures during two consecutive week nights of SR-248 between MP 14.21 to MP 14.23 for Structure work. One week prior to the structure work a VMS must be placed prior to the bridge deck in both directions giving advance notice of full closure date and time. The detour route will be SR-32 to US-40, a VMS will need to be placed at the intersection of SR-32 and SR-248 and another VMS will be placed at the end of all US-40 off Ramps at SR-248 of the closure of SR-248 in Kamas and the assigned detour.
 2. Flagging Operation/Lane Closure Length
 - a. Limit total length of lane closures to a maximum length of 3 miles.
 - b. Shorten lengths of lanes closures, if necessary, to allow for complete clearing of traffic queues for each cycle of flagging and/or pilot car operations. Do not stop traffic at flagging

stations for longer than 15 minutes. If multiple flagging stations are used, the total traffic stop time within the project shall not be longer than 15 minutes.

3. Tour of Utah
 - a. Tour of Utah 2017 is scheduled the week of July 31, 2017 to August 6, 2017. The race route is not finalized, as of project advertisement, but anticipated to utilize SR-248. No work or lane restrictions will be allowed during the day when the race passes along SR-248. All equipment and traffic control devices must be cleared from the roadway surface. Roadway surface must be smooth, not milled, swept and cleared of debris.
4. Community Events
 - a. The following events are in and near the project area. The events listed are for information only. The Contractor is required to include these events in their work schedule. Events listed are those known at the time of Advertisement and future unknown events are likely. The events are anticipated to utilize SR-248. No work or lane restrictions will be allowed during the day(s) when the event utilizes SR-248. All equipment and traffic control devices must be cleared from the roadway surface. Roadway surface must be smooth, not milled, swept and cleared of debris. The Contractor shall coordinate with the Engineer, and 3rd Party PIM to mitigate impacts for the events held in the community during construction:
 - 1) Kamas Fiesta Days (July near the 24th)
 - 2) Tour of Utah (August)
 - 3) TriUtah – Jordanelle Triathlon
 - 4) National Ability Center Bike Rides
 - 5) Tour of Park City
5. Adjacent Projects
 - a. Coordinate traffic control with projects in the vicinity:
 - 1) SR-32; Rockcliff to Kamas (Pavement Rehabilitation)
Project Manager - Oanh Le-Spradlin 801-975-4819
Resident Engineer - Jon Ogden 801-910-2580
6. Maintain access to side streets at all times including right and left turn lanes except for the time required to rotomill and pave in front of side streets.
7. Do not close lanes if no work is taking place.
8. No traffic will be allowed on the milled surface.
9. Failure of the Contractor to cease work and open the traffic lanes to traffic as specified in this article will result in a price adjustment per Section 01554, article 1.12, paragraph B.

- F. Maintain safe passage of pedestrians and bicyclists through the work zone according to the Americans with Disabilities Act and the MUTCD.
- G. Stripe traffic lanes or provide temporary traffic markings before removing traffic control. (Temporary striping is paid under traffic control).
- H. Notify the Engineer and Third Party Public Information Manager 14 calendar days in advance of any work that may be done on or adjacent to private property.
- I. Contact Police, Fire and Emergency Services in the area at least 7 calendar days prior to beginning work. Inform them in writing of work location, lane closures and schedule as work progresses. Give the Engineer a copy of the work plan. Provide 24 hour contact information.
- J. Contractor will not be allowed on any private property without written approval from the property owner unless there is an acquired construction easement.
- K. Contact Blue Stakes prior to the installation of signs. Mark each sign location prior to contacting Blue Stakes. Provide Blue Stakes with a location of each sign location by route and milepost. Adjust final location of signs as needed to avoid utilities.
- L. Maintain signal detection and communication throughout the duration of the project. New radar detection must be installed, inspected, and operational before removal of old detection. Contact Region 2 Signals Inspector Shaun Montgomery (801-514-9283) at least 7 days prior to signal work with any questions and to schedule integration.
- M. Install RRFB Pedestrian Activated Signal per manufacturer's requirements. Contact UDOT Traffic and Safety Consultant Richard Hibbard, 801-633-6404, with questions.
- N. Contractor to clean all earthmoving construction equipment before mobilizing onto the project site and avoid unnecessary earth disturbance throughout construction. Reclaim all disturbed areas per UDOT standard specifications.

Delete Article 1.14, paragraph A and replace with the following:

- A. Contract time begins as specified in this section article 1.7 Notice to Proceed.

Add Article 1.14 paragraph E:

- E. Contract time **will not** be suspended during the period between the first and second application of pavement marking paint. Contractor should take this into account when bidding number of days. Substantial completion **does not** occur until all applications of pavement marking paint are installed.
1. Apply the second application of pavement marking paint at least 15 days but no later than 30 days after the first application.

DEFINITIONS

Delete Article 1.2 and replace with the following:

1.2 Related Sections

- A. Section 00725: Scope of Work
- B. Section 01280: Measurement
- C. Section 01282: Payment

Add Article 1.3, paragraph B:

- B. UDOT Specification Writers' Guide

Delete Article 1.6, paragraph A45 and replace with the following:

- 45. MUTCD Utah Manual on Uniform Traffic Control Devices (This applies to all references to the MUTCD in Department Standard Specifications and Drawings, Supplemental Specifications and Drawings, Special Provisions, and Plan Sheets.) Refer to <http://www.udot.utah.gov/go/standardsreferences> for a link to the Utah MUTCD.

Delete Article 1.7, paragraph A38 and replace with the following:

- 38. **Debarment** – Action taken by the Department or federal government pursuant to policies or regulations that prohibits a person or company from performing work on a public project.

Delete Article 1.7, paragraph A49, Table 1 and replace with the following:

Table 1

Holiday Categories	
Category I	Category II
Martin Luther King, Jr. Day	New Year's Day
Presidents' Day	Memorial Day
Columbus Day	Independence Day
Veteran's Day	Pioneer Day
	Labor Day
	Thanksgiving Day
	Christmas Day

Delete Article 1.7, paragraph A66 through A104 and replace with the following:

- 66. **Probation** – Action taken by the Department pursuant to Department policies that prohibits a person or company from bidding on Department or Department administered projects.
- 67. **Profile Grade** – The trace of a vertical plane intersecting the top surface of the proposed wearing surface, usually along the longitudinal centerline of the roadbed. Profile grade means either elevation or gradient of such trace according to the context.
- 68. **Project** – The specific section of the highway or other specific property on which construction is to be performed together with all improvements to be constructed under the contract.
- 69. **Proposal** – A bidder's written response to a Department request for proposals. See Value Engineering Change Proposal.
- 70. **Responsible Bidder** – A bidder able to perform the specified work as determined by the Department.
- 71. **Responsive Bid** – A bid that meets all requirements of the invitation for bids.
- 72. **Resources** – The labor, equipment, materials, and incidentals necessary to perform work on a contract bid item or other element of work.
- 73. **Right-of-Way** – A general term denoting land, property, or interest acquired for or devoted to transportation purposes.
- 74. **Roadbed** – The graded portion of highway within top and side slopes, prepared as a foundation for the pavement structure and shoulders.
- 75. **Roadbed Material** – Material in cuts, embankments, and embankment foundations from the subgrade down that supports the pavement structure.

76. **Roadside** – The areas between the outside edges of the shoulders and the right-of-way boundaries including unpaved median areas between inside shoulders of divided highways and areas within interchanges.
77. **Roadside Development** – Items necessary for the preservation or replacement of landscape materials. Features may include suitable plantings and other improvements or ground cover to preserve and enhance the appearance and stability of the highway right-of-way or acquired easements for scenic improvements.
78. **Roadway** – The portion of a highway within the construction limits.
79. **Shoulder** – The portion of the roadway adjacent to the traveled way where vehicles may stop for emergencies and which supports base and surface courses.
80. **Sidewalk** – That portion of the roadway constructed exclusively for pedestrian use.
81. **Significant Change in Character of Work** – Work that differs materially in kind or nature from that involved or included in the original contract or results in the total quantity of a major contract item, as defined in this section, varying from the original contract quantity by more than 25 percent.
82. **Site of Work** – As defined in Title 29 CFR Part 5.2 (I).
83. **Specifications** – The compilation of provisions and requirements for the performance of prescribed work.
- a. **Special Provisions** – A unique specification or a modification or revision to the standard specifications applicable to an individual contract.
 - b. **Supplemental Specifications** – Approved additions and revisions to the Standard Specifications.
 - c. **Standard Specifications** – Specifications approved for general application and repetitive use.
84. **Specifications Format** – See the Specification Writer’s Guide. Refer to <http://www.udot.utah.gov/go/standardsreferences>. The titles or headings of the sections, parts, articles, paragraphs, and sub-paragraphs in Standard Specifications and Special Provisions are intended for convenience of reference and have no bearing on their interpretation.
85. **Stabilization** – Modification of soils or aggregates by incorporating materials that increases load-bearing capacity, firmness, and resistance to weathering or displacement.
86. **State** – The State of Utah acting through its authorized representative.
87. **Structures** – Bridges, culverts, catch basins, drop inlets, retaining walls, cribbing, manholes, endwalls, buildings, sewers, service pipes, underdrains, foundation drains, and other such features that may be encountered in the work.

88. **Subcontractor** – An individual or legal entity to which a Contractor sublets part of the work.
89. **Substantial Completion** – Substantially complete. The day, determined by the Engineer, when all of the following have occurred:
- a. The public, including vehicles and pedestrians, has full and unrestricted use and benefit of the facilities both from the operational and safety standpoint including all Intelligent Transportation Systems (ITS) and Advanced Traffic Management Systems (ATMS).
 - b. All safety features are installed and fully functional, including, but not limited to, illumination, signing, pavement markings, all coats of striping paint, barrier, guardrail, impact attenuators, delineators, and all other safety appurtenances.
 - c. All remaining bid items in the contract are complete in addition to safety features. Only minor corrective work and replacement of temporary substitute facilities remains for physical completion.
 - d. The Contractor and Engineer mutually agree that all work remaining will be performed without lane closures, trail or sidewalk closures, or further delays, disruption, or impediment to the public.
90. **Substructure** – All of the structure below the girders or main load carrying members of simple and continuous span bridges, including abutments, bent caps, columns, bents, footings, wingwalls, and skewbacks of arches.
91. **Superintendent** – The Contractor's authorized employee in responsible charge of the work.
92. **Superstructure** – All of the structure except the substructure as defined in this section.
93. **Surety** – The legal entity or individual, other than the Contractor, executing a bond furnished by the Contractor.
94. **Time Related Cost (Time component)** – A bid item that identifies a daily value based on user costs or liquidated damages. Time value is the sum of the products of the time-related cost rates multiplied by the time bid by the Contractor to achieve the milestones specified.
95. **Town, City, or District** – A subdivision of the county used to designate or identify the location of the contract.
96. **Traveled Way** – The portion of the roadway designated for the movement of vehicles, excluding shoulders and auxiliary lanes.
97. **Unbalanced Bid**
- a. **Mathematically Unbalanced** – A bid containing lump sum or unit bid items that do not include reasonable actual costs plus a reasonable proportionate share of the bidder's anticipated profit, overhead costs, and other indirect costs.

- b. **Materially Unbalanced** – A mathematically unbalanced bid that generates a reasonable doubt that awarding the contract to the bidder will result in the lowest ultimate cost to the Department.
- 98. **Unrestricted Traffic** – No traffic control measures in use that obstruct, delay, or in any way impede traffic flow, other than those specifically permitted in the contract.
- 99. **User Costs** – Costs incurred by the traveling public due to construction activities.
- 100. **Utility** – All privately, publicly, or cooperatively owned lines, facilities, and systems for producing, transmitting, or distributing communications, power, heat, gas, oil, water, waste, and storm water not connected with the highway drainage, signal systems, and other products that directly or indirectly serve the public. The utility company.
- 101. **Value Engineering Change Proposal** – A change proposed by the Contractor and considered by the Department intended to result in project cost savings to contract pay items without reducing the essential functions and characteristics of the project. Refer to Section 00725.
- 102. **Work** – The elements, activities, and incidentals necessary to complete a project (including labor, materials, equipment, and the interim products and stages attained in the course of reaching completion), and all alterations, amendments, or extensions made by change order or other written orders of the Engineer.
- 103. **Working Day** – Any calendar day, except:
 - a. Contract designated holidays or days restricted in the contract.
 - b. Days when the Contractor is specifically required by the contract or letter from the Engineer to suspend operations through no fault of the Contractor.
 - c. Days when the Engineer determines that inclement weather or adverse conditions interfere with the progress of the work.
 - 1) When the Engineer determines that inclement weather prevents the Contractor from working for at least 50 percent of the normal working day.
 - 2) The day may be considered a working day even though conditions may improve and the major portion of the day could be considered suitable for operations if weather stops the Contractor's crew from beginning work at the normal starting hour and the crew is released as a result.
 - d. Saturdays and Sundays for submittals and notifications.

104. **Working Drawings** – Drawings produced by the Contractor that supplement the contract drawings to provide information not included in the contract documents but that is required to fabricate, erect, transport, or temporarily support the structure or structural elements in the completion of the work. Working drawings do not supersede the contract drawings.
105. **Written Permission of the Engineer** – A letter signed by the Engineer granting specific permission and outlining limitations of the permission.

November 1, 2016

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 00725M

SCOPE OF WORK

Delete Article 1.2 and replace with the following:

1.2 RELATED SECTIONS

- A. Section 00221S: Bidding Contract Time
- B. Section 00555: Prosecution and Progress
- C. Section 00570: Definitions
- D. Section 00727: Control of Work
- E. Section 01282: Payment
- F. Section 01355: Environmental Compliance
- G. Section 01554: Traffic Control
- H. Section 01741: Final Cleanup

Delete Article 1.5 and replace with the following:

1.5 SUBMITTALS

- A. Refer to this Section, article 1.7, paragraph C.

Add the following to paragraph 1.6 Contract Intent:

- B. The project consists of the following main items of work:
 - 1. Segment 1 - MP 3.19 to 3.55: Rotomilling 3" of existing asphalt and replacing with 3" of SMA.
 - 2. Segment 2 - MP 3.55 to 6.2: 4" Cement Treated Asphalt Base (CTAB) of existing asphalt topping it with 3" of SMA. Import material to use for shouldering.

3. Segment 3 - MP 6.2 to 14.48: Rotomilling 2" of existing asphalt and replacing with 2" of SMA. Utilize existing material to re-dress the shoulders.
4. Approximately MP 12.29 to 12.73: Pave Cut and widen the roadway to the South between 5' to 26'. Placing 12" of Granular Borrow, 6" of Untreated Base Course, 4" of HMA, and 2" of SMA. Utilize existing material to re-dress the WB shoulder, use excavated material from the widening section for the EB shouldering.
5. Lowering valves, manholes, and cleanout boxes prior to the rotomilling operations and then raise them back to the finished surface.
6. Installing Rapid Flashing Beacon at approximately MP 3.41
7. Repairing all soft spots within the project limits as determined by the Engineer.
8. Construct, and Reconstruct pedestrian ramps at the locations as directed by the Engineer.
9. Reestablish all pavement markings, pavement messages, and rumble strips within the project limits. Document and furnish a copy of the size, location, and type of the following items in an acceptable format:
 - Pavement Markings
 - Pavement Messages
 - Rumble Strips
 - Manholes
 - Valves
 - Monuments
 - Cleanout boxes

Do not proceed with work until the Engineer reviews and accepts the documentation. The Engineer will have two days to review the documentation.

Layout pavement markings, messages, and Rumble Strips according to the documentation or as otherwise directed by the Engineer.

Delete Article 1.7 and replace with the following:

1.7 PARTNERING

- A Implement partnering according to the Partnering Field Guide. Refer to <http://www.udot.utah.gov/go/standardsreferences>.
- B. Share all partnering costs equally with the Department.

- C. Submit certificates for all required individuals, as listed in the Partnering Field Guide before execution of the first month's construction estimate. Failure to comply will result in 25 percent of the first estimates Mobilization payment up to \$25,000 being withheld until all individuals have completed the required training.

Add Article 1.19, paragraph J5:

- 5. Time savings resulting from a VECP are not financially compensated to the Contractor above the maximum dollar amount eligible for incentive payment as specified in Section 00221S.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 00727M

CONTROL OF WORK

Delete Article 1.26 and 1.27 and replace with the following:

1.26 CLAIMS HIGHER LEVEL REVIEW

- A. Make a good-faith effort to settle the claim by utilizing the Partnering Escalation Ladder identified in the Partnering Field Guide prior to submitting a claim and requesting a meeting with the Claims Review Board.
- B. Submit a written request for a higher-level review to the Engineer within 10 calendar days after receiving the Engineer's decision or offer if not accepting the Engineer's denial of a claim, or a settlement offer. Attach to the written request for a higher-level review all required information. Refer to this Section, Article 1.23, paragraph D.
- C. Failure to submit a request within this 10-day time frame is considered acceptance of the Engineer's claim denial or offer.

1.27 CLAIMS REVIEW BOARD

- A. A Claim will be referred to the Claims Review Board (CRB) when requested by the Contractor as provided in this Section.
- B. The purpose of the CRB is to provide an independent and impartial review of submitted claims, written findings, and recommendations to the Department's Deputy Director.
- C. Scheduling a hearing or utilizing the CRB does not relieve the Contractor or Department of complying with all Contract terms and conditions, and does not waive any notice or timeliness requirements. Proceed diligently with all work during the CRB process.
- D. The Director of Construction or designee schedules a hearing before the CRB when deemed to be in the best interest of both the Contractor and the Department based on the Contractor's request for a higher-level review.
 - 1. The claim may be presented informally with or without legal counsel.

2. Notify the Department at least 10 calendar days before the meeting when using legal counsel.
 3. Legal counsel will be allowed to attend the presentation, and will be allowed to make brief opening and closing remarks and advise their clients. No other participation by legal counsel at the presentation will be permitted.
- E. Parties will bear their own costs.
1. All costs associated with preparation and participation in the CRB meeting will be the responsibility of each party.
 2. The Contractor will not receive compensation for travel, time, research activities, time away from the project, presentation preparation, presentation time or any other activities associated with the preparation for or participation in the CRB process.
- F. Pre-presentation Requirements
1. The Department and the Contractor will prepare concise written statements describing the claim and each party's position with reasoning and submit to the Project Controls Engineer who will distribute them to the other party a minimum of 7 calendar days before the scheduled presentation.
 2. The parties will submit their visual presentation to the Project Controls Engineer who will distribute it to the other party a minimum of 7 calendar days before the scheduled presentation, if either party chooses to prepare a visual presentation.
- G. Presentation
1. The party that is in attendance will prevail in their position on the claim if either the Department or the Contractor fails to appear before the CRB on the date and time scheduled for the presentation without justifiable cause.
 2. The Contractor will submit their position first, followed by the Department.
 3. The duration of each party's presentation will be determined when the Claim meeting is scheduled and will be agreed to by both parties.
 - a. The duration may vary depending on the complexity and size of the claim.
 4. Only information or claims related to the Contractor's original claim may be discussed in the hearing.
 - a. No new information may be submitted.
 - b. The CRB will inform the party that no additional information or claims are permitted if the Contractor or Department attempts to submit new information.

5. Recording the meeting by tape, court reporter, or video is prohibited.
 6. This presentation is informal, allowing for the Contractor and Department to present their positions, and for all parties to exchange questions and answers.
 7. The meeting will be conducted as follows:
 - a. The chairman informs the meeting attendees of the procedures and format of the meeting.
 - b. Both parties may deliver brief opening and closing remarks.
 - c. The Contractor presents their claim in detail as supported by previously submitted information and documentation.
 - 1) The presentation can be verbal or visual.
 - d. The Department presents its detailed position as supported by previously submitted information and documentation.
 - 1) The presentation can be verbal or visual.
 8. The CRB may allow rebuttals by both parties during the meeting after both the Contractor and Department make their presentations.
 - a. Rebuttals will not be heard after the meeting has ended.
- H. Offer of Settlement or Rejection of Claim
1. The Department Deputy Director makes an offer of settlement within 45 calendar days of the claim hearing if the offer is less than the amount required to be reviewed by the Transportation Commission.
 2. The decision of the Department Deputy Director is administratively final.
 - a. The CRB hearing ends all administrative appeal processes available to the Contractor.
 - b. The Contractor may elect to file a complaint in State court if the claim is rejected, or if the sum tendered by way of settlement is not acceptable to the contractor.
- I. Acceptance or Rejection
1. Provide written notice to the Deputy Director of acceptance or rejection of the offer or rejection of the claim within 7 days of the date of the Deputy Director's offer.
 - a. The Department will promptly process any required payments or contract changes if both the Department and Contractor agree to resolve the Claim.

Delete Article 1.28, paragraph B and replace with the following:

- B. Employ a qualified safety person.
 - 1. Required qualifications
 - a. Verifiable broad based safety background.
 - b. One of the following degrees or certifications:
 - 1) College degree in Occupational Safety & Health (OSH) related field
 - 2) Associate Safety Professional (ASP)
 - 3) Certified Safety Professional (CSP)
 - 4) Certified Industrial Hygienist (CIH)
 - 5) Construction Health and Safety Technician (CHST)
 - 6) Associate in Risk Management (ARM)
 - 7) OSHA 500, or other nationally recognized OSH related field certification approved by UDOT Risk Management
 - c. Must stay current on certification via the OSHA 502 or equivalent of 8 Continuing Education Units (CEU) in OSH related fields every 3years.
 - 2. Responsibilities
 - a. Perform on-site safety inspections on a monthly basis, for jobs 45 days or longer in duration. Refer to the UDOT Safety and Health Manual.
 - b. Coordinate all safety related efforts with the on-site competent safety person.
 - c. Cannot perform production-related responsibilities on the project.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 00820M

LEGAL RELATIONS AND RESPONSIBILITY TO THE PUBLIC

Delete Article 1.13 and replace with the following:

1.13 PROTECTING AND RESTORING PROPERTY AND LANDSCAPE

- A. Preserve public and private property during the work.
- B. Secure legal right to access the property before any work is performed on public or private property. All damage as a result of trespass will be the financial responsibility of the Contractor including additional acquisition costs.
- C. The Engineer verifies the location of monuments and property line markers and provides written approval before they are moved, disturbed, or damaged.
- D. Accept liability for any damage to public or private property resulting from defective work, materials, or non-execution of the contract until contract completion.
- E. Restore damaged property and items removed temporarily during construction to a condition similar or equal to that existing before the damage at no cost to the Department.
- F. Temporarily discontinue work if remains of prehistoric dwelling sites or artifacts of historical or archeological significance are encountered. Refer to Section 01355.

Delete Article 1.17, paragraph C and replace with the following:

- C. Contractor and the Department agree to provide each other with a copy of the summons and complaint within a reasonable time if served with a lawsuit or Notice of Claim. Do not file a responsive pleading on behalf of the Department until receiving written notice that the Department chooses to have Contractor handle the defense. The Department will provide the Contractor such written notice in a timely manner allowing the Contractor adequate time to respond to the summons.

Delete Article 1.17, paragraph F3 and replace with the following:

3. Notify claimants of their right to request re-examination of denied or partially denied claims of \$5,000 or less by the:
UDOT Claims Re-Examination Board
4501 South 2700 West
West Valley City, UT 84114-8430
Phone: (801) 965-4715
 - a. The information provided to the claimant includes:
 - 1) A time deadline for requesting re-examination equal to seven days after notification of denial or partial denial
 - 2) Address and name of the person to whom it should be directed
 - 3) General information helpful in making a determination
 - 4) Department project number and location
 - b. The claim can be overturned by the Department if claimant is not notified of right to request re-examination.

Add Article 1.17, paragraph F5:

5. The Claims Re-examination Board cannot review any claim filed in the small claims court, district court, or appealed to the district court.
 - a. The person in charge of responding to Claims Re-examination Board requests will put the following paragraph on all written correspondence:

"Parties seeking to file a claim before the Claims Re-examination Board must certify that the claim has not been filed in or heard by a small claims or district court."

Delete Article 1.18, paragraph B.2.a and replace with the following:

- a. Provide General Liability insurance with the following minimum limits of liability:
 - 1) \$1 million Bodily Injury and Property Damage – Each Accident
 - 2) \$3 million General Aggregate
 - 3) \$3 million Products and Complete Operations Annual Aggregate

**Supplemental Specification
2012 Standard Specification Book**

SECTION 01282M

PAYMENT

Delete Article 1.8, paragraph A1 and replace with the following:

1. The Department does not allow compensation for loss of expected reimbursement or loss of anticipated profits suffered or claimed by the Contractor resulting either directly from such alterations or indirectly from unbalanced allocation among the contract items of overhead expense and subsequent loss of expected reimbursement or from any other cause.

Delete Article 1.9, paragraphs C and D and replace with the following:

- C. Negotiated lump sum or unit prices for changes to the contract work will be based on the Contractor's estimate to do the work as validated by the Engineer's independent cost assessment. Support the price with a detailed cost estimate that includes the following information:
 1. Estimated labor hours based on agreed upon productivity rates.
 - a. Use the actual cost of wages and benefits for the labor rates applied to the estimated man hours.
 - b. Include certified accounting records verifying these costs or make them available upon request of the Engineer.
 2. Estimated material quantities based on agreed upon quantities.
 - a. Use actual material costs as verified by supplier estimates or invoices.
 - b. Use agreed to production rates for material produced on site.
 3. Estimated equipment hours based on agreed upon productivity rates.
 - a. Use the lesser of the following for determining equipment costs:
 - 1) Rental rates obtained from the Rental Rate Blue Book for Construction Equipment according to this Section article 1.11.

- 2) Actual cost of the equipment to the Contractor based on internal equipment billing rates or actual rental rates supported by rental agreements for equipment applied to the estimated equipment hours. Include certified accounting records substantiating these costs or make them available upon request of the Engineer.
4. A 15 percent markup will be paid on all expenses identified above. This markup compensates the Contractor for home office overheads and profit.
5. The following additional markups will be allowed on the total of all work according to change order performed solely by subcontractors:
 - a. 15 percent markup on first \$75,000 of total subcontracted work.
 - b. 10 percent markup on total of subcontracted work between \$75,000 up to \$250,000.
 - c. 7.5 percent markup on total of subcontracted work exceeding \$250,000.
6. No other expenses will be compensated unless approved by the Engineer.

Delete Article 1.10, paragraph A2 and replace with the following:

2. The Department does not compensate for the following:
 - a. Labor inefficiencies caused by the Contractor.
 - b. Consequential damages, including but not limited to, loss of bonding capacity, loss of bidding opportunities, and insolvency.
 - c. Attorney's fees, claims preparation expenses, or litigation costs.

Delete Article 1.11 and replace with the following:

1.11 FORCE ACCOUNT

- A. The Engineer may require the Contractor to work on a force account basis for the convenience of the Department or when the Contractor and Engineer are unable to negotiate an agreed upon price for changed or added work. Costs reimbursed according to this Section are considered full and complete compensation for the work performed.

- B. Labor will be reimbursed at the actual cost of wages, benefits and burdens. A 15 percent markup will be paid on all labor expenses. This markup compensates the Contractor for field overheads, home office overheads, and profit.
1. Provide daily field records showing the labor hours charged to the force account work. The Engineer must approve these records daily.
 2. Include certified accounting records verifying these costs or make them available upon request of the Engineer.
- C. Materials installed and accepted by the Engineer as part of the force account work will be paid for at actual cost plus a 15 percent markup. The markup compensates the Contractor for field overheads, home office overheads, and profit.
1. Provide daily field records showing the materials installed as part of the force account work. The Engineer must review and approve these records daily.
 2. Include copies of invoices and certified accounting records verifying these costs or make them available upon request of the Engineer.
- D. Compensation for Equipment
1. The Department will pay the following:
 - a. Hourly rates for machinery or special equipment, excluding small tools, authorized by the Engineer. Hourly rental rates are determined by the monthly rental rate found in the Rental Rate Blue Book for Construction Equipment divided by 176. The total hourly rates have been computed from equipment costs currently in effect and do not include costs for operating personnel.

Obtain this publication through:

Equipment Watch

1735 Technology Drive, Suite 410

San Jose, CA 95110-1313

Phone: (800) 669-3282

Fax: (800) 224-3527

Refer to <http://www.udot.utah.gov/go/standardsreferences>.

The rates require adjustment by a Regional Factor and a Depreciation Factor with operating and standby rates established as follows:

- 1) Operating Rate – Hours the equipment is actually in use. This includes ownership and operating costs adjusted for depreciation and region factors.

- 2) Standby Rate – Compensation for equipment required to be at the work site but not operating. This rate is 50 percent of the adjusted ownership and operating costs computed above. The duration of allowable standby time must be approved in writing by the Engineer with a maximum of eight hours per day or 40 hours in a week.
 - 3) The Department uses the shown capacity that is closest to the manufacturers when the manufacturer's rated capacity falls between those shown in the Rental Rate Blue Book for Construction Equipment.
 - 4) Agree upon all rates in writing before beginning work.
 - 5) Obtain approval from the Engineer for any equipment rental rates not provided before the start of any force account work.
2. The Department does not pay for pickup trucks used solely for transportation.
 3. Provide daily field records showing the equipment hours charged to the force account work. The Engineer must review and approve these records daily.
 4. Provide certified accounting records verifying these costs.
- E. Subcontract work will be reimbursed in the same manner as the Contractor's work is reimbursed as described above.
1. The following additional markups will be allowed on the total of all work according to force account performed solely by subcontractors:
 - a. 15 percent markup on first \$75,000 of total subcontracted work.
 - b. 10 percent markup on total of subcontracted work between \$75,000 up to \$250,000.
 - c. 7.5 percent markup on total of subcontracted work exceeding \$250,000.
 2. Provide daily field records showing the subcontract labor, material, and equipment charged to the force account work. The Engineer must review and approve these records daily.
 3. Provide certified accounting records verifying these costs.

Delete Article 1.12 paragraph C and replace with the following:

- C. Payments are based on estimates prepared by the Engineer of the value of work performed and materials in place under the contract and for payment for material on hand according to this Section. Payment will not be made for material and work without complete acceptance documentation.

Delete Article 1.13 title and paragraph A and replace with the following:

1.13 PAYMENT FOR MATERIAL ON HAND (Stockpile)

- A. Present the delivery copies of invoices. The Department may include advance partial payments for acceptable nonperishable materials purchased expressly for incorporation in the work when delivered in the vicinity of the project or stored in approved storage place.
1. The Engineer determines the amount to be included in the estimate but in no case will the amount exceed the value of the materials as shown on the delivery invoice or 75 percent of the in-place price, whichever is less.
 2. Furnish evidence that the stockpiled materials are irrevocably obligated to the project when the approved storage location is other than the project site.
 3. The Department does not pay when the invoice value of such materials, as determined by the Engineer, amounts to less than \$2,000 or if materials are to be stored less than 30 calendar days, unless otherwise specified.
 - a. The Department will waive the 30 day limit and pay advance payment for Pavement Marking Tape if the Pavement Marking Tape placement is delayed more than one week beyond the original CPM schedule date.
 4. Furnish the Engineer certified paid invoices or a certified statement with a copy of the check showing payment within 60 calendar days following the date of the estimate invoice on which the stockpile material is to be paid by the Department.
 5. Material will be removed from the next partial estimate as stockpiled materials if proper invoices showing payment to the supplier is not received.

Add Article 1.14, paragraph A4:

4. An affidavit may be required, as determined by the Engineer, from all Subcontractors certifying they have been paid for all labor and materials incorporated into the project.

Delete Article 1.15, paragraph A3 and replace with the following:

3. This provision is automatically invoked and becomes effective when the change in the cost of fuel warrants the adjustment during the course of construction of the project and remains in effect for the duration of the project.
 - a. Adjustments are then made on all future partial estimates.

Add Article 1.16, paragraph A3:

3. The Contractor can choose to opt out of the Asphalt Cost Adjustment (ACA).
 - a. Check the appropriate box on the bid proposal indicating the intent to opt out of the ACA.
 - b. The ACA cannot be reactivated on a project for which the Contractor has opted out.

Delete Article 1.16, paragraph C.1.a.2) and replace with the following:

- 2) The high reported wholesale asphalt price (per ton) from the Argus Asphalt Report for Rocky Mountain and West coast asphalt prices for:
Denver
Las Vegas
Montana
Phoenix
Salt Lake City
Wyoming

SPECIAL PROVISION

**PROJECT# F-0248(16)3
PIN# 9713**

SECTION 01315S

PUBLIC INFORMATION SERVICES

Delete Section 01315 in its entirety and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Responsibilities of Contractor Public Information Contact for the duration of a project.

1.2 RELATED SECTIONS

- A. Section 00555: Prosecution and Progress
- B. Section 01554: Traffic Control

1.3 REFERENCES Not Used

1.4 DEFINITIONS

- A. Contractor Public Information Contact: Person from the Contractor, who is regularly on the project site and will be responsible for coordinating public needs with the Third-party Public Information Manager and UDOT Engineer.
- B. Logbook: Book where communication with Engineer, Third- party Public Information Manager, and stakeholders is documented.
- C. Project Hotline: Phone number established by the Third-party Public Information Manager available for stakeholders to reach the project team.
- D. Public Information (PI) Services: Tasks performed to inform and update stakeholders about construction activities, which may include distributing fliers and PI contact information, updating UDOT Traffic, and creating media materials.

- E. Region Communications Manager (RCM): Person who oversees communications and public information services on projects in the Region.
- F. Stakeholder: Any person, business, agency, community or organization affected by construction project impacts.
- G. Third-party Public Information Manager (PIM): Person hired by UDOT to perform public information services on a project.

1.5 SUBMITTALS

- A. Provide a copy of the logbook to UDOT Engineer and third-party PIM on a weekly basis, or as needed.

1.6 PERFORMANCE REQUIREMENT

- A. Designate the Contractor Public Information Contact at the project pre-construction conference.
 - 1. Responsible for coordinating PI needs with Engineer and Third-party PIM.
 - a. Contractor Public Information Contact duties take precedence over other assigned duties.

1.7 PIC RESPONSIBILITIES

- A. Maintain daily, or as needed, communication with Engineer and Third-party PIM.
- B. Document correspondence with Engineer, third-party PIM, and stakeholders in logbook.
- C. Attend weekly construction meeting with project team to gather schedule updates, share stakeholder inquiries, and coordinate PI needs.
- D. Work with Engineer and Third-party PIM to resolve PI questions and concerns within 24 hours of initial stakeholder inquiry. Third-party PIM will respond to stakeholder. (Safety issues must be resolved immediately)

1.8 PAYMENT PROCEDURES

- A. Department makes:
 - 1. Partial payments for the pay item Public Information Services as the work progresses when the Contractor provides public information services according to this specification.

2. Payments based on a percentage of project completion.
- B. The Engineer and Third-party PIM monitor and evaluate the Contractor Public Information Contact and all PI services. Failure to provide public information services according to this specification results in a weekly deduction of \$1,000.

PART 2 PRODUCTS

2.1 OFFICE SPACE AND EQUIPMENT - GENERAL

- A. Telephone Services
- B. Labor and material required to perform the duties and responsibilities of this section.

PART 3 EXECUTION

3.1 ESTABLISH LOCAL PUBLIC INFORMATION SERVICES

- A. Provide contact information to Engineer and Third-party PIM.
- B. Maintain logbook.
1. Document correspondence with Engineer, Third-party PIM, and stakeholders.
 - a. Date, time
 - b. Contact information
 1. Name, phone number, address and/or email address
 - c. Description of inquiry
 - d. Response
 - e. Subsequent responses or actions taken during construction
 2. Work with Third-party PIM to coordinate, answer and determine course of action to respond to all inquiries within 24 hours of initial request. (Safety issues must be resolved immediately). Action may include a phone call, written correspondence and/or in-person meeting, which Third-party PIM will coordinate.
 3. Provide copy of logbook to Engineer and Third-party PIM on a weekly basis, or as needed.
- C. Respond to questions from UDOT Engineer and Third-party PIM concerning activities and schedules within 24 hours.

- D. Participate in meetings held with stakeholders, as needed.
- E. Communicate deviations from schedule established in the weekly update meeting to Engineer and Third-party PIM.
- F. Communicate project activities that affect traffic and access to the Engineer and Third-party PIM.
 - 1. Contact them within 15 minutes of a major accident or other unexpected occurrence that impedes traffic flow, alters traffic routes significantly or causes other disruption to the traveling public in the project area.
- G. Forward all media inquiries and interview requests regarding the project to the Third-party PIM, who will pass the information along to the RCM and UDOT Central Communications via the 24-hour UDOT Media Hotline, 801-746-9932.

END OF SECTION

**Supplemental Specification
2012 Standard Specifications Book**

SECTION 01355M

ENVIRONMENTAL COMPLIANCE

Delete Article 3.7, paragraph A1 and replace with the following:

1. Cultural and Paleontological – Initiate consultation with a Department staff archaeologist to determine cultural resource survey needs and clearance requirements. The Department staff archaeologist provides clearance to the Engineer through written notification.

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 01452S

PAVEMENT SMOOTHNESS

(International Roughness Index Specification)

Delete Section 01452 and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Process and procedures for acceptance testing and determination of a minimum International Roughness Index (IRI) and Incentive/Disincentive for smoothness of Hot Mix Asphalt (HMA), Open Graded Surface Course (OGSC), Bonded Wearing Course (BWC), Stone Matrix Asphalt (SMA), Micro-Surfacing, Portland Cement Concrete Pavement (PCCP) and Portland Cement Concrete Pavement (PCCP) rehabilitation using a profiler approved and certified by the Department.

1.2 RELATED SECTIONS

- A. Section 02735: Micro-Surfacing
- B. Section 02741: Hot Mix Asphalt
- C. Section 02742S: Project Specific Surfacing Requirements
- D. Section 02744S: Stone Matrix Asphalt
- E. Section 02752: Portland Cement Concrete Pavement
- F. Section 02786: Open Graded Surface Course
- G. Section 02787: Bonded Wearing Course
- H. Section 02981: Grinding Pavement

1.3 REFERENCES

- A. AASHTO R 43: Quantifying Roughness of Pavements

- B. AASHTO R 54: Accepting Pavement Ride Quality When Measured Using Inertial Profiling Systems
- C. AASHTO R 57: Operating Inertial Profiling Systems
- D. UDOT Materials Manual of Instruction
- E. AASHTO M 328: Inertial Profiler

1.4 DEFINITIONS

- A. Category 1
 - 1. Newly constructed pavement surfaces having two or more opportunities for improving ride.
- B. Category 2
 - 1. Newly constructed pavement surfaces without two or more opportunities for improving ride.
- C. Opportunity to Improve Ride
 - 1. Placing Granular Borrow, Untreated Base Course, Treated Base Course, Open-Graded Surface Course (OGSC), Bonded Wearing Course (BWC), Stone Matrix Asphalt (SMA), Rotomilling, Cold-In-Place Recycling, Hot-In-Place Recycling, and each lift of paving.
 - 2. Lane leveling is not considered an opportunity to improve ride.
- D. Pavement Section
 - 1. Each travel lane or median, 0.1 mile long, sections include:
 - a. All traffic lanes
 - b. Ramps
 - c. Medians 8 ft and wider
 - d. Turn lanes
 - e. Approach slabs with final riding surfaces placed as part of the contract
 - 2. Each pavement section is laid out consecutively from the start of the project.
 - 3. Localized Roughness Criteria also applies to bike lanes and shoulders.
- E. Structure Section
 - 1. Each travel lane or median, 0.1 mile long, sections include
 - a. Bridges, approach slabs and pavement within 25 feet of the approach slab with final riding surfaces placed as part of the contract.

- F. Wheel Path
 - 1. A continuous parallel line 2.5 ft inside the lane or median lines.
- G. Mean Roughness Index (MRI)
 - 1. Average of two wheel path IRIs taken from each pavement section.
- H. Localized Roughness
 - 1. Profile deviations in a continuous 25-ft pavement.

1.5 SUBMITTALS

- A. Certifications for Profilers and Operators.
- B. Summary report of acceptance profile testing for the project, including electronic file. Refer to AASHTO R 43.
- C. Original raw data files compatible with the ASTM E2560 standard. Refer to AASHTO R 43.
 - 1. Data files collected before corrective work
 - 2. Data files collected for final acceptance

1.6 GENERAL REQUIREMENTS

- A. Certify operators and equipment according to UDOT Materials Manual of Instruction 995.
- B. Perform all work necessary to prepare the pavement for testing, including sweeping; this is incidental to the work and is not measured for payment.
 - 1. Seal asphaltic based pavements after corrective grinding.
 - 2. Include all costs and resources for smoothness testing, preparation, and correction, including traffic control, temporary pavement markings, grinding or milling, disposal of waste material, and flush coat for ground areas in the surfacing bid items.
- C. Perform Independent Assurance testing with the Department as directed by the Engineer according to AASHTO R 54 *Verification Testing*.

1.7 ACCEPTANCE

- A. The Department evaluates longitudinal deviations for all roadways using acceptance profiles performed by the Contractor.
 - 1. Determine IRI using the most recent version of Profile Viewer and Analysis (ProVAL) software. Refer to AASHTO R 54 and ASTM E2560. Areas of localized roughness will be identified using the ProVAL "Smoothness Assurance" analysis, calculating IRI with a

continuous short interval of 25 ft [7.62 m] and the 250-mm filter applied.

2. Determine MRI for each Pavement Section with 250-mm filter applied.
- B. Limit transverse pavement deviations to less than 3/16 inch from the lower edge of a 10-foot straightedge.
 - C. Pavement smoothness is evaluated before and after corrective work. Final pavement smoothness acceptance is based on the final profile of all Pavement Sections of the project.
 - D. Limit localized roughness as specified in Section 02742S
 1. Include profile deviations from bridge decks, approach slabs and transitions, manholes, valves, and other facilities in the profile when the contract requires the adjustment, new construction or reconstruction of these facilities.
 2. Exclude profile deviations from bridge decks, approach slabs and transitions, manholes, valves, and other facilities in the profile when the contract does not include adjustment, new construction or reconstruction of these facilities.
 3. Limit profile deviations in shoulder or bike lane as specified in 02742S.

1.8 INCENTIVE/DISINCENTIVE

- A. The Department applies Incentive/Disincentive for final smoothness to Category 1 pavement surfaces longer than 1,000 ft and structure sectionsRefer to Section 02742S.
 1. Prorate incentives/disincentives for partial pavement sections.
 2. Not eligible for incentives:
 - a. Pavement requiring corrective action at the time of acceptance testing. Disincentives are based on the MRI obtained at the time of final acceptance re-testing.
 - b. Non-PCCP Pavement Section where grinding exceeds 20 yd²; disincentive remains applicable. The minimum disincentive for these pavement sections is \$1,000 each.
 - c. Pavements with grinding on the final surface of OGSC, BWC, and Microsurfacing.
- B. The Department applies Incentive/Disincentive for Category 2 pavements according to Section 02742S.
 1. The department calculates the percent of improvement using the following formula:

$$\frac{MRI_o - MRI_f}{MRI_o} \times 100$$

Where:

MRI_o = MRI of original roadway surface

MRI_f = MRI of final corrected roadway surface

- C. The Department does not apply Incentive/Disincentive to:
1. Pavements shorter than 1,000 ft
 2. Shoulders
 3. Bike lanes
 4. Medians narrower than 8 ft
 5. Horizontal curves with a centerline curvature radius less than 900 ft and areas within the superelevation transitions to these short radius curves
 6. Tapers
 7. Surfaces within 15 ft of bridge decks and approach slabs not paved as part of the contract

PART 2 PRODUCTS

2.1 PAVEMENTS

- A. Hot Mix Asphalt (HMA). Refer to Section 02741
- B. Open Graded Surface Course (OGSC). Refer to Section 02786
- C. Bonded Wearing Course (BWC). Refer to Section 02787
- D. Stone Matrix Asphalt (SMA). Refer to Section 02744S
- E. Micro-Surfacing. Refer to Section 02735
- F. Portland Concrete Pavement (PCCP). Refer to Section 02752

2.2 FLUSH COAT

- A. Tack coat. Refer to Section 02748

PART 3 EXECUTION

3.1 PAVEMENT PROFILE CORRECTION

- A. Perform preliminary profiling and roadway smoothness evaluation to identify any defects exceeding acceptance limits.
 1. Correct defects before performing acceptance testing.

- a. Measure and correct localized roughness defects in the underlying surface before placement of the final OGSC, BWC, SMA, or Micro-Surfacing surface course.
- b. Correct localized roughness defects across lanes, medians, and shoulders in widths terminating at a lane line, edge of pavement, or center of the lane by grinding with a device approved by the Engineer. Refer to Section 02981
 - 1) Include areas not eligible for incentive/disincentive. Refer to this Section, article 1.8, paragraph. B,.
- c. Taper corrected areas for smooth transverse transitions and surface drainage.
- d. Re-profile for correction verification before acceptance testing.
- e. Seal corrected areas in BWC, OGSC, HMA, SMA, and Micro-Surfacing with a flush coat application.
 - 1) Apply the emulsion according to Section 02748 for tack coat.

3.2 ACCEPTANCE TESTING

- A. Notify the Engineer in writing at least two working days before performing acceptance testing for pavement smoothness.
 1. After all corrective work has been performed
 2. Clearly define each of the pavement sections to be evaluated.
- B. Perform acceptance testing for smoothness.
 1. Collect longitudinal profiles in each wheel path and in the center of each paved shoulder and bike lane using Department certified profilers and operators in accordance with AASHTO R 54, R57 and M328.
 2. Determine the MRI for each Pavement Section.
 3. Determine localized roughness using IRI.
 4. Submit a summary report to the Engineer within two working days that includes pavement section identification, profile results, and bump locations showing localized roughness corrections by pavement section.

3.3 PAVEMENT THICKNESS

- A. Determine PCCP thickness after smoothness acceptance testing.
- B. Re-test other pavements for thickness after grinding as directed by the Engineer.

END OF SECTION

**Supplemental Specification
2012 Standard Specification Book**

SECTION 01452M

PAVEMENT SMOOTHNESS

Delete Article 1.8 paragraph I and replace with the following:

- I. Failure to correct defects identified at the time of acceptance testing within 14 calendar days after notification by the Engineer results in penalty assessed at \$100 per day per affected pavement section.
 1. The Engineer may waive the penalty when it is determined to be in the best interests of the Department to defer corrective work.

April 13, 2016

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 01455M

MATERIAL QUALITY REQUIREMENTS

Delete Article 1.16, paragraph B1 and replace with the following:

1. All manufacturing processes of the steel and iron material in a product such as melting, rolling, extruding, machining, bending, grinding, drilling, and coating must occur within the United States.

Delete Article 1.16, paragraph C1c and replace with the following:

- c. Material descriptions, quantities, and means of material identification such as heat numbers, lot numbers, and other industry identification markings for each process the material underwent so the final product can be tracked through a step process from melting to final product.
- d. Tracking quantities is not required for coating operations and for mill certifications.

Delete Article 1.16, paragraph D1 and replace with the following:

1. Track the use of all permanent foreign steel incorporated in the project.

Delete Article 1.16, paragraph E and replace with the following:

- E. The following are exempt from Buy America except as noted:
1. Temporary steel or iron materials.
 2. Materials left in place for the Contractor's convenience that could be removed without damaging the completed work
 3. Items such as nuts, bolts, washers, screws, concrete chairs, spacers, mailboxes, and other steel or iron parts that may be considered miniscule or non-structural to the whole of the project.
 4. Fencing stays, clips, staples, or other miscellaneous fencing components.
 5. Manufactured assemblies that are less than 51 percent by weight steel or iron content when it is delivered to the job site for installation.
 - a) Pre-cast items such as pipe, manholes, and drainage boxes must meet the Buy America requirements.
 6. The major steel and iron components of the following and other similar assemblies must meet the requirements of Buy America:
 - a) Guardrail, guardrail posts, end sections, terminals, cable barrier, steel or iron pipe, conduit, grates, manhole covers and risers, mast arms, poles, standards, trusses, supporting structural members for signs, luminaires, and traffic control systems.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 01455M

MATERIAL QUALITY REQUIREMENTS

Add Article 1.4, paragraph B:

- B. Approved Products List (APL) - A list of products and materials that the Department accepts as meeting the requirements in the Department's Standard Specifications and Drawings. Refer to the Department Materials Web site to access the APL at <http://www.udot.utah.gov/go/standardsreferences>.
1. The APL does not include all acceptable products. It includes products submitted by manufacturers and reviewed by the Approved Products Panel.
 2. Inclusion in the APL is not a product endorsement by the Department.

Add Article 1.5, paragraph E:

- E. Completed APL Compliance Form and Manufacturer Instructions printed from the Department's Approved Products List Web site. Refer to the Department Materials Web site to access the APL at <http://www.udot.utah.gov/go/standardsreferences>. Refer to this Section, Article 1.18.

Delete Article 1.11, paragraph A4 and replace with the following:

4. Lot identification or manufacturer's identification of the certified materials or assemblies delivered to the project

Add Article 1.11, paragraph D:

- D. Provide the APL Compliance Form and Manufacturer Instructions instead of a Certificate of Compliance if the product is listed in the Department's APL. Refer to this Section, article 1.18.
1. Do not use the APL Compliance Form for acceptance when a project special provision modifies the product requirements in the Standard Specifications.

Add Article 1.18:

1.18 APL COMPLIANCE FORM

- A. Provide the completed APL Compliance Form and Manufacturer Instructions printed from the Department's Approved Products List website instead of a Certificate of Compliance if the product is listed in the Department's APL. Refer to the Department Materials Web site to access the APL at <http://www.udot.utah.gov/go/standardsreferences>.
 - 1. The Engineer will evaluate the suitability of the product for its intended use according to the restrictions in the APL.
 - 2. Do not use the APL Compliance Form for acceptance when a project special provision modifies the product requirements in the Standard Specifications.

- B. Buy America requirements still apply when acceptance is based upon the APL Compliance Form. Refer to this Section, article 1.16.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 01456M

MATERIALS DISPUTE RESOLUTION

Delete Article 1.6, paragraph C and replace with the following:

- C. Include the following items in the engineering analysis where applicable:
 - 1. Data supporting the Contractor's test results. Data must be based on project quality control testing.
 - a. Split sample testing performed within the applicable contract.
 - b. Contractor's test data for the disputed results along with all supporting test data and calculations for calculated values such as bulk specific gravity, maximum specific gravity, and ignition oven results for disputing VMA in asphalt concrete.
 - c. Successful laboratory correlation information when required by material specification.
 - 2. Slump, air, yield, and similar items for disputing compressive strength of Portland cement concrete.
 - 3. Statistical analysis or identification of outliers.
 - 4. Procedures or issues leading to disputed acceptance test results.
 - 5. Incentive/Disincentive calculations based on both Contractor and Department test values, individually.

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 01554M

TRAFFIC CONTROL

Add Article 3.8:

3.8 NOTIFICATION OF LANE CLOSURES AND SUBSEQUENT OPENINGS

- A. Provide advance notification of every lane closure on designated state Routes to the engineer.
1. Notify the engineer as soon as it is known that a lane closure is necessary to execute the work and at a minimum, 72 hours before the closure.
 2. Notify the engineer immediately when the schedule, location, or need for an upcoming lane closure changes.
 3. Include in the notification the route, the beginning and ending milepost/mile marker, number of lanes to be closed, direction of the closure, the date and time of the beginning of closure, and the date and time of the ending of the closure.
 4. Notification of the engineer may be made in person or via email, phone call or text message.
- B. Provide advance notice of every lane closure to third-party public involvement consultant for entry into UDOT Traffic Lane Closure system via UDOT Traffic website. Information should be provided to third-party public involvement consultant 72 hours prior to each closure.
1. Refer to Section 01315.
- C. Provide real-time notification of every lane closure, and subsequent lane opening, via UDOT Lane Closure mobile application. (**Use iOS or Android smartphone**; download instructions for app will be provided by UDOT.)
1. **Lane Closure:** Confirm closure details via mobile application 30 minutes before placing the first traffic control device in the travel lane. (*Mobile application will generate a notification of the upcoming closure 45 minutes prior to scheduled start time; contractor accepts the closure to activate it, or cancels/reschedules the closure as needed.*)
 2. **Lane Opening:** Confirm lane reopening via mobile application 30 minutes prior to removing the last traffic control device in the lane. (*Mobile application will generate a notification 45 minutes prior to*

scheduled expiration of lane closure; contractor accepts the notification to confirm scheduled end time, or extends the closure as needed.)

3. **In the event mobile application is not working or unavailable: Call the TOC at (801) 887-3700** and provide information to activate, modify, or delete lane closure in the UDOT Traffic Lane Closure system. This call must be made 30 minutes prior to placing the first device in the travel lane, and 30 minutes prior to reopening the lane.

- D. Include brief summary of lane closure notification plan in Traffic Control Plan narrative.
 - A. Lane closure notification plan

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 01557S

MAINTENANCE OF TRAFFIC (MOT)

Add Section 01557:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. MOT Maintainer
- B. Maintenance of Traffic (MOT) plans, Materials, and labor necessary for implementation.
- C. Variable message signs and construction signs

1.2 RELATED SECTIONS

- A. Section 00555: Prosecution and Progress
- B. Section 01554: Traffic Control
- C. Section 02891: Traffic Signs

1.3 REFERENCES

- A. Manual on Uniform Traffic Control Devices, Latest Edition (MUTCD).

1.4 DEFINITIONS

- A. Maintenance of Traffic (MOT): The work necessary to advise the public of changes to normal traffic flow, and to indicate planned detours and alternate routes to closed roads. Use solely as advisory information to the public.

1.5 SUBMITTALS

- A. Daily inspection reports on a form acceptable to the Engineer.

- B. Proposed MOT plan to the Engineer for approval if a construction phase is proposed that is not covered by a Department supplied MOT plan.
 - 1. Submit proposed MOT plan to the Engineer 10 working days before the proposed MOT plan is to be implemented.

1.6 POST-BID REQUIREMENTS

- A. Department provides MOT plans to be implemented as part of the bid package.
- B. Attend a mandatory meeting as detailed in Section 01554.
- C. Attendees of the mandatory meeting will review the Contractor's submitted traffic control plans and the Department's supplied MOT plans for compatibility. Modify plans where necessary, as set forth in Section 01554.
- D. Do not begin work on the project until written approval of the MOT plan is received from the Engineer. No item of work can begin until the approved MOT plan is implemented for that phase of work.

1.7 MOT MAINTAINER

- A. The Traffic Control Maintainer, as specified in Section 01554 is responsible for maintenance of MOT on the project. The Department makes no separate payment for maintenance of MOT.
- B. Inspect MOT devices daily for compliance with the MOT plans.

1.8 MAINTENANCE OF MOT DEVICES

- A. Maintain traffic control devices per Section 01554.

1.9 WAGE RATES FOR TRAFFIC CONTROL PERSONNEL (FEDERAL AID JOBS ONLY)

- A. Refer to Section 01554 for wage rate information.

1.10 PAYMENT PROCEDURES

- A. Partial Payments - Based on the percentage of the project completed, excluding the cost of MOT.
 - 1. Failure to comply with any of the requirements of this special provision will result in non-compliance.

- B. Price Adjustments:
 - 1. The Department reduces payment if the MOT implemented is not in compliance with the approved MOT plan, as determined by the Engineer.
 - 2. The amount per day by which the Contractor's compensation will be reduced is calculated using the greater of the following:
 - a. The daily charge in the Schedule of Liquidated Damages found in Section 00555 or
 - b. The Contract lump sum bid price for MOT divided by the number of Contract days.
- C. Payment for change in scope: Negotiate a price adjustment for MOT if the Engineer orders a change in the scope of work that requires modification to the approved MOT Plan.

PART 2 PRODUCTS

2.1 SIGNS

- A. Refer to Section 02891.
- B. Use type and configuration as directed by the MOT plans.

2.2 VARIABLE MESSAGE SIGNS (VMS)

- A. Advance warning device
 - 1. Conform to guidelines set forth in Section 6F.60 of the MUTCD.
 - 2. Messages can be changed on-site and by dial-up modem

PART 3 EXECUTION

3.1 MODIFICATION OF MOT PLANS

- A. Engineer may modify the MOT plans at any time.
- B. Implement changes to the MOT plan before the end of the work shift.
- C. Each phase of construction must be covered by an approved MOT plan.
 - 1. Do not begin work until the proposed MOT plan is approved for use, and has been fully implemented.

3.2 TRAFFIC CONTROL DEVICES

- A. Installation and Maintenance:
 - 1. Install appropriate devices for each construction phase as identified in the appropriate MOT plan.
 - 2. Maintain devices to provide proper, continuous functionality.
 - 3. Wash devices weekly unless conditions warrant more frequent cleaning.
 - 4. Replace any device missing any part of the message or background.
- B. Channelizing Devices: Use as directed by the MOT plan.
 - 1. Furnish a daily record of the number and location of all traffic control devices in use.
 - 2. Remove devices from the site of work when they are not needed for the immediate control of traffic.

3.3 VARIABLE MESSAGE SIGN (VMS)

- A. The Department retains control of messages appearing on the VMS. Do not change the location or the message configuration of the VMS unless directed to by the Engineer in writing.
- B. Place in view of oncoming traffic without obstructing traffic flow. Relocate VMS to match field conditions at no additional cost to Department.
- C. Provide dial-up modem number to the Engineer.
- D. Use necessary traffic control devices with VMS to provide safe operation.
- E. Remove devices from the site of work when they are not needed for the immediate control of traffic.
- F. Unless directed by the Engineer, display advance notification VMS messages for a minimum of seven days prior to any traffic impacts such as start of work, change in traffic directions, etc. at each end of the project.
- G. Make two additional VMS signs available at all times during the project to be used as directed by the Engineer at no additional cost to the Department.

3.4 COORDINATION OF SIGNAL OPERATIONS

- A. Notify the Engineer seven days prior to implementing a MOT plan (detour plans and alternate route plans) or any traffic control plan that impacts signal operations to allow the Engineer to coordinate any necessary signal timing adjustments with the TOC (Traffic Operations Center).
- B. Changes to traffic signal operations will be done by the Department.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 01571

TEMPORARY ENVIRONMENTAL CONTROLS

Delete Section 01571 and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Requirements for controlling erosion and preventing sediment laden runoff from leaving the construction site and areas under the Contractor's control.
- B. Requirements for installing, inspecting, maintaining, and removing temporary erosion and sediment control measures.
- C. Materials and procedures for installing and removing temporary environmental fencing.

1.2 RELATED SECTIONS Not Used

1.3 REFERENCES

- A. AASHTO M 288: Geotextile Specifications for Highway Applications
- B. UDOT Erosion and Sediment Control Field Guide
- C. Utah General Permit for Discharges from Construction Activities No. UTRC00000.

1.4 DEFINITIONS

- A. Check Dam – A fiber roll or stone structure placed across a ditch to slow velocity and intercept and trap sediment.
- B. Drop Inlet Barrier – A fiber roll or silt fence placed around a drop inlet that intercepts and traps sediment.
- C. Fiber Roll – A tube-like structure of encased natural materials used to intercept and trap sediment in a sheet flow situation.

- D. Gutter Inlet Barrier – A protective barrier placed around a gutter inlet that intercepts and traps sediment before it enters the inlet.
- E. Pipe Inlet Barrier – A barrier protecting a pipe inlet that intercepts and traps sediment before it enters the pipe.
- F. Sediment Trap – An excavated basin usually installed at low points on a construction site that intercepts and traps sediment.
- G. Silt Fence – A geotextile fabric fence used to intercept and trap sediment in a sheet flow situation.
- H. Slope Drain – A polyethylene pipe placed on a slope to collect and transport storm runoff down the face of a slope until permanent drainage facilities are installed or vegetation growth is adequate.
- I. Stabilized Construction Entrance – A layer of rock placed at a construction site entrance or exit that removes mud from vehicle tires to prevent tracking onto a paved road.
- J. Straw Bale Barrier – Straw bales placed end to end, used where a silt fence would fail. Install to intercept and trap sediment.
- K. Temporary Berm – A ridge of compacted soil with or without a shallow ditch that diverts storm runoff from a slope to a controlled release point.
- L. Temporary Environmental Fence – A visual barrier used to delineate and prevent encroachment on sensitive areas.

1.5 SUBMITTALS

- A. Submit a signed copy of the Notice of Intent (NOI) to the Engineer before beginning any earth disturbing activities on projects that disturb more than one acre.
- B. Environmental Control Supervisor (ECS), Certificate of Training
 1. Certification to the Engineer that the ECS selected for the project has completed Department's online ECS training and passed the ECS examination.

1.6 PAYMENT PROCEDURES

- A. Payment for the items associated with this section includes all costs for labor, equipment, and materials for installation, inspection, maintenance, and removal as required.

- B. Work required by the ECS will be paid under that item when a bid item has been included in the contract for an ECS. Work listed in this Section will still need to be performed by the Contractor and paid under the individual erosion and sediment control measures when a bid item for an ECS is not included on the project.
- C. Penalties
 - 1. Penalties are assessed against the Contractor in the amount of \$500 for each calendar day or portion thereof the project is not in compliance with all required permits and regulations. The penalties assessed are increased to \$1,000 per day if the Contractor remains in non-compliance after three days and increased to \$1,500 per day if the Contractor remains not in compliance after seven days.
 - 2. Any fines issued by regulatory agencies against the Department are added to the penalty assessed to the Contractor.
 - 3. No extension of contract time is allowed for any delay resulting directly or indirectly from a violation of environmental requirements.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Check Dams
 - 1. Fiber Roll
 - a. Use 12 inch diameter fiber roll selected from products included on the Department Approved Products List for Fiber Rolls.
 - b. Wood Stakes – 1 inch square by 18 inches long.
 - c. Channel Liner – Use products included on the Department Approved Products List for Channel Liners.
 - 2. Stone
 - a. Angular, well-graded, within 2 to 6 inches in diameter.
- B. Silt Fence
 - 1. Silt Fence Fabric – Refer to AASHTO M 288, Table 7 – Temporary Silt Fence Property Requirements
 - 2. Wood Post – Nominal 2 inch square by 4 ft long.
 - 3. Fasteners – Staples, wire, zip ties, or nails sufficient to maintain fabric attachment to post.
- C. Fiber Roll
 - 1. Use 12 inch diameter fiber roll selected from products included on the Department Approved Products List for Fiber Rolls.
 - 2. Wood Stakes – Nominal 1 inch square by 18 inches long.

- D. Slope Drain
 - 1. 12 inch diameter single wall polyethylene pipe
 - 2. Polyethylene end section
 - 3. Loose Riprap
 - 4. Wood Stakes – Nominal 2 inch square by 3 ft long.

- E. Temporary Berm
 - 1. Existing Soil

- F. Drop Inlet Barriers
 - 1. Fiber Roll
 - a. Use 18 inch diameter fiber roll selected from products included on the Department Approved Products List for Fiber Rolls.
 - b. Wood stakes – Nominal 2 inch square by 2 feet long.
 - 2. Stone – Angular, well-graded within 2 to 6 inch diameter.
 - 3. Silt Fence – Refer to AASHTO M 288, Table 6 – Temporary Silt Fence Property Requirements.
 - a. Wood stud: 2 inches x 4 inches nominal.

- G. Pipe Inlet Barrier
 - 1. Stone – Well-graded within 2 to 6 inch in diameter.
 - 2. Fiber Roll
 - a. Use 18 inch diameter fiber roll selected from products included on the Department Approved Products List for Fiber Rolls.
 - b. Wood stakes – Nominal 2 inch square by 2 ft long.

- H. Curb Inlet Barrier
 - 1. Fiber Roll – 9 inch minimum diameter selected from products included on the Department Approved Products List for Fiber Rolls.
 - 2. Sand Bags – 14 inch x 26 inch, UV stabilized polypropylene bags, 50 lb capacity with attached ties.
 - 3. Sand

- I. Sediment Trap
 - 1. Loose Riprap – Refer to Section 02373.

- J. Stabilized Construction Entrance
 - 1. Stone – 2 to 3 inch diameter.

- K. Straw Bale Barrier
 - 1. Straw Bales – Obtained from weed-free fields that have been certified by the Utah Department of Agriculture.

- L. Temporary Environmental Fence
 - 1. Fence Fabric
 - a. Polyethylene, high-density, UV stabilized
 - b. Width, 4 ft minimum
 - c. Color, Orange
 - 2. Posts
 - a. Wood Post – Nominal 2 inch square by 4 ft long.
 - b. Fasteners – Staples, wire, zip ties, or nails sufficient to maintain fabric attachment to post.

PART 3 EXECUTION

3.1 PERMIT COMPLIANCE

(Only for projects disturbing one or more acres of ground)

- A. Complete the remaining sections of the Storm Water Pollution Prevention Plan (SWPPP) provided by the Department and sign the SWPPP before submitting the Notice of Intent (NOI).
- B. Obtain permit coverage and renewals at the Contractor's expense under the Utah General Permit for Discharges from Construction Activities by completing and submitting the online NOI form located on the Utah Division of Water Quality web site. Refer to <http://www.udot.utah.gov/go/standardsreferences>.
- C. Post documentation of permit coverage on the project site in a publicly assessable location.
 - 1. Include permit tracking number and contractor's contact name, phone number or email address or both.
- D. Do not begin any earth-disturbing activity until the NOI form has been completed online and submitted to the Division of Water Quality.
- E. Comply with the requirements of Utah General Permit for Discharges from Construction Activities – Permit No. UTRC00000. Refer to <http://www.udot.utah.gov/go/standardsreferences>
- F. Modify the SWPPP whenever changes are made to the construction plans, stormwater control measures, pollution prevention measures, or other activities at project site that are no longer accurately reflected in the SWPPP.
 - 1. Document and sign the modifications in the SWPPP within 7 calendar days.

- G. Install sediment control measures along the project perimeter and those protecting surface waters and wetlands before starting earth-disturbing activity.
- H. Provide and maintain a 50-foot no disturbance buffer around surface waters or equivalent sediment control measures (See Permit 2.1.2) unless the project qualifies under a compliance alternative.
- I. Obtain written approval from the Engineer to change the SWPPP.
- J. Designate an ECS to work directly with the Engineer's designated ECS and be available as needed to coordinate the SWPPP, inspect and maintain erosion control devices, and resolve other sediment and erosion control issues.
- K. Maintain a copy of the prepared SWPPP on the project site at all times and attach the following items as they occur through project construction:
 - 1. Any changes made to the SWPPP
 - 2. Inspection forms
 - 3. Corrective Actions
- L. Minimize sediment trackout onto offsite streets, other paved surfaces, or sidewalks from vehicles exiting the construction site.
- M. Follow the Permit if a conflict occurs between erosion and sediment control plans or specifications and the Utah General Permit for Discharges from Construction Activities.

3.2 INSTALLATION

- A. The control measures in the SWPPP are illustrative.
 - 1. Adapt measures in the field to meet their intended purpose and implement appropriate control measures through all phases of the project.
 - 2. Make required changes to the SWPPP to accommodate construction sequencing with the approval of the Engineer.
- B. Install additional control measures as directed by the Engineer.
- C. Follow installation procedures outlined in the EN Series Standard Drawings and the UDOT Erosion and Sediment Control Field Guide.
- D. Provide or construct control measures such as check dams, silt fence, slope drains, drop inlet barriers, sediment traps, and other sediment and erosion control devices or methods to reduce construction site erosion and prevent sediment laden runoff from leaving the site.

- E. Initiate soil stabilization measures whenever earth-disturbing activities have permanently ceased on any portion of the site but in no case longer than 14 days.
- F. Initiate soil stabilization measures whenever earth-disturbing activities have temporarily ceased on any portion of the site where grading, excavation, or topsoil placement operations will not resume for a period of 14 or more calendar days but such activities will resume in the future.
- G. Document on the inspection form the date when earth-disturbing activities temporarily ceased on an area.
- H. Refer to the Utah General Permit for Discharges from Construction Activities Part 2.2 for what defines initiation of stabilization.
- I. Install temporary environmental fence in the required locations before construction activities begin.
 - 1. Install posts at a 12 ft maximum spacing so the fence does not sag more than 2 inches between posts.
 - 2. Weave the fence over the support posts alternating every two loops and secure it to the posts with fasteners.

3.3 INSPECTION

- A. Inspect all denuded areas during construction to determine potential erosion problems. Apply control measures as required.
- B. Conduct SWPPP inspections at least once a week upon beginning earth-disturbing activities and within 24 hours after any storm event $\frac{1}{2}$ inch or greater. Conduct inspections at least once a month for areas that are temporarily or permanently stabilized and in cases where the ground is frozen, suspend inspections until thawing conditions begin to occur.
 - 1. Include the Engineer's ECS on all inspections.
 - 2. Complete a Division of Water Quality inspection form during each inspection and submit it to the Engineer within 24 hours of the inspection. Include the following information:
 - a. Names of personnel attending and date of the inspection.
 - b. List of problems identified in the previous inspection and note whether or not corrections have been made.
 - c. List by location, all earth-disturbing activities since previous inspection.
 - d. List by location, erosion and sediment control measures installed since previous inspection.

- e. List by location, new and unresolved problems encountered with specific erosion control measures. Describe solutions to be implemented.
 - f. Sign the inspection form.
- C. Accommodate inspections requested by regulatory agencies.

3.4 MAINTENANCE

- A. Maintain sediment control devices to function properly until all disturbed areas draining to them are stabilized.
- B. Remove and properly dispose of sediment when it has accumulated half way up the overall structure height or when it interferes with the performance of the structure.
- C. Dispose of sediment removed from erosion control structures in a manner acceptable to the Engineer.

3.5 REMOVAL

- A. Remove temporary sediment and erosion control devices as indicated below:
 - 1. Remove check dams in cut ditches when the areas draining to the cut ditch have been seeded and mulched or blanketed and the ditch has been permanently lined.
 - 2. Remove drop inlet and curb inlet protection when the areas draining to them have been stabilized.
 - 3. Remove silt fence and fiber rolls when the areas draining to them have been seeded and mulched or blanketed. Do not remove silt fence or fiber rolls protecting a wetland or waterway unless the surrounding area meets final stabilization requirements.
- B. Remove temporary environmental fence and posts upon completion of construction.
 - 1. Temporary environmental fence and all components become property of the Contractor when construction is complete.

3.6 PERMIT CLOSE-OUT

(Only for projects that obtained a permit)

- A. Obtain approval from Engineer through the Region Landscape Architect that all permit requirements for final close-out under the Contractor's control have been met before terminating the permit.

- B. Close-out the Utah General Permit for Discharges from Construction Activities by submitting a Notice of Termination (NOT) form to the Division of Water Quality along with a signed copy to the Engineer on project locations that receive less than 20 inches of average annual precipitation.
- C. Transfer the permit to the Department as directed by procedures identified in the permit on project locations that receive more than 20 inches of average annual precipitation and the project has not met final stabilization requirements upon project close-out.

END OF SECTION

**Supplemental Specification
2012 Standard Specification Book**

SECTION 01721

SURVEY

Delete Section 01721 and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Construction surveying, staking, measurement, and calculations essential to complete the project and properly control the entire work.
- B. Directed surveying as requested by the Engineer.
- C. Processes and procedures for implementing Machine Control Guidance (MCG) technology. MCG uses Global Positioning System (GPS) and Robotic Total Station (RTS) in conjunction with three-dimensional computer models to determine the precise location and elevation of the materials being moved.

1.2 RELATED SECTIONS

- A. Section 02765: Pavement Marking Paint

1.3 REFERENCES

- A. Plan Sheet Development Standards
- B. UDOT CADD Standards
- C. UDOT Survey & Geomatics Standards Manual
- D. Utah Administrative Code
- E. Utah Code

1.4 DEFINITIONS Not Used

1.5 SUBMITTALS

- A. The Department requires that all submittals be signed and sealed by a Professional Land Surveyor licensed in the State of Utah.
- B. Re-submittals may be required depending on completeness and correctness of the work.
- C. Submit a statement before award date indicating all Department provided horizontal and vertical survey control has been field checked and the control has been determined to be accurate within the tolerances specified in the UDOT Survey and Geomatics Standards Manual. Refer to <http://www.udot.utah.gov/go/standardsreferences>.
 - 1. Attach field survey information used to verify control.
 - 2. Notify the Engineer verbally and in writing if discrepancies are found.
 - 3. Include any additional survey points required to implement the MCG/RTS technology.
- D. Provide a written description of the equipment before beginning work including calibration certifications, manpower, methods, and data storage format proposed for use to complete all survey activities.
- E. Record keeping – Keep all field notes, diaries, and books according to standard surveying practice.
 - 1. Loose leaf books are not acceptable.
 - 2. Make available at any time all survey records including field notebooks and forms used for the work to the Engineer upon verbal or written request.
 - 3. Electronic records and reports are acceptable
- F. Surveying and design data requirements:
 - 1. Return all survey and design data to the Engineer after project completion with compliance to the UDOT Survey and Geomatics Standards, Plan Sheet Development Standards, and UDOT CADD Standards. Refer to <http://www.udot.utah.gov/go/standardsreferences>.
 - 2. Complete the following if design plans were included with the advertising package for the project:
 - a. Provide a red-lined hard copy plan set showing "As-built" features denoting changes from the original design.
 - b. Provide an electronic copy of the red-lined 11 x 17 "As-built" plan, containing the "As-Built" stamp dated and signed by the Engineer, in a colored PDF format as follows:
 - 1) Resolution of not less than 400 dpi.

- 2) Individual file sizes not greater than 100 megabytes.
 - 3) Group similar sheet types together into individual PDF files such as Summary Sheets grouped together in a single PDF file or Summary Sheets and Plan and Profile Sheets grouped together in a single PDF file.
3. Complete the following if the Department provides 3D elements, 3D models, or both at advertising:
- a. Provide all files, named and placed in accordance to the UDOT CADD Standards Manual, Plan Sheet Development Standards, and submitted into the UDOT Projectwise System.
 - b. Update 3D model with "As-built" features denoting changes from the original design.
 - c. Provide final model incorporating all design changes.
 - d. Intermediate models at request of the Engineer.
 - e. Support paperless inspection.
 - f. Provide documentation of quality control measurements when requested by the Engineer.
 - g. Submit completed "As-Built" electronic files into the UDOT Projectwise System in accordance with the UDOT Survey and Geomatics Standards, Plan Sheet Development Standards, and UDOT CADD Standards.
4. Submit an "As-Built" model with approval of the Engineer to document design changes if construction of a project was based on a model prepared by the Contractor or a project that was not designed using paperless methodology.

G. Survey Monuments

- 1. Refer to this Section, article 3.12, paragraph C3 for submittal of drawings and notes.

H. Provide the following for MCG technology implementation:

- 1. Written notification to the Engineer that MCG will be used on the project.
- 2. Electronic or hand written stakeout/cut-fill reports or both for cross section stakes, according to this Section, Article 3.5.
 - a. Reports are not required when measurement of work is by "Plan Quantity" or Weight.

I. Alternate methods of calculating quantities.

- 1. Engineer may approve alternate methods of calculating quantities. Submit proposed alternate method of quantity calculation before beginning item of work.

1.6 MEASUREMENT PROCEDURES

- A. Directed Survey – Use a survey crew measured by the hour authorized if extra survey work is needed. Department makes no additional payment for travel time to and from the project.

1.7 PAYMENT PROCEDURES

- A. Include the costs in all items of work that require survey if contract does not include separate pay item for survey. Failure to comply with any portion of this specification may result in withholding up to 25 percent of contract payments until the deficiencies are corrected.
- B. Directed survey work is paid for in the accepted quantities if needed and approved at a standard negotiated rate.
- C. Include the costs of all machine control equipment in equipment cost. Include all survey equipment and labor in the bid item for survey.

1.8 QUALITY ASSURANCE

- A. Assume responsibility for survey and control of the work and for correcting errors whether the errors are discovered during the actual survey work or in subsequent phases of the project and bears any cost overruns resulting from errors.
- B. Perform all work according to the plans and specifications and standard Engineering and Surveying practices under the responsible charge of a Professional Engineer or Professional Land Surveyor licensed in the State of Utah.
- C. The Engineer may spot check the work for accuracy and may reject unacceptable portions of work. Resurvey rejected work and correct work that is not within the specified tolerances at no additional cost to the Department.
- D. Any 3D model used in conjunction with MCG must be verified by a Professional Engineer or Professional Land Surveyor licensed in the State of Utah.
- E. Correct any construction errors that result from errors in a 3-D model once the design 3D model has been accepted.

PART 2 PRODUCTS

2.1 EQUIPMENT

- A. Furnish tools, supplies, and stakes suitable for use in highway survey work.
- B. Furnish stakes and hubs of sufficient length to provide a solid set in the ground with sufficient surface area above ground for necessary legible markings.
- C. Furnish survey instruments and supporting equipment capable of achieving the specified tolerances.
 - 1. Calibrate survey equipment yearly and check for accuracy before beginning survey work and as required throughout the duration of the project. Make the calibration certificate available upon request by the Engineer.

2.2 EQUIPMENT FOR DEPARTMENT USE

- A. Provide and maintain the following equipment when MCG is to be used on the project:
 - 1. GPS Capable Rover compatible with the other GPS equipment being used on the project.
 - 2. Other hardware and software associated with the equipment so that Department personnel can operate the equipment for quality assurance purposes.
 - 3. Provide adequate training so that Department personnel can operate the survey equipment.
 - 4. Make GPS rover available immediately upon request from the Engineer.
 - 5. Develop a process with the Department to check-in and check-out equipment from the Contractor.

PART 3 EXECUTION

3.1 PREPARATION

- A. Discuss and coordinate the following with the Engineer before survey work begins:
 - 1. Required submittals
 - 2. Survey and staking methods
 - 3. Stake markings
 - 4. Grade control
 - 5. Referencing

6. Structure control
 7. Any other procedures and control necessary for the work
 8. Documentation procedures
- B. Establish construction survey points, elevations, and grades as necessary to control layout and complete the work. Verify all control surveying and staking meet specified tolerances before beginning work.
- C. Calculate all grades, elevations, offsets, and alignment data necessary for staking or setting items of work. Obtain approval from the Engineer for alternate methods of establishing grade control with wire lines, computer, or laser controlled grading or other suitable methods.
- D. Provide appropriate traffic control for all survey activities.
- E. The Department furnishes:
1. Horizontal and vertical control points
 2. Cross sections developed during design, if any
 3. Electronic project data
 4. Digital Terrain Model used for design
 5. 3-D data consisting of:
 - a. LandXML files for the Design Digital Terrain Models, including features for projects implementing MCG
 - b. LandXML files for the Design Alignments
 - c. A Bentley iModel may be substituted for LandXML data.
- F. Contract Provision Disclaimer
1. Provide a written request to the Engineer to obtain electronic data points.
 2. Electronic data points are available in UDOT standard CADD formats only.
 3. Data points are prepared by the Department for its own purposes and not for the benefit of private individuals or businesses.
 4. Waive any claims that may result from the use of or reliance on the data points.
 5. Indemnify the Department and hold it harmless for any damages, costs, attorney fees, or other liabilities that might be incurred as a result of the Department's use and reliance on the Contractor's modified data.

3.2 DIRECTED SURVEY

- A. Conduct directed surveying if requested by the Engineer.
1. Includes work needed for changes and extra work. Provide all labor, materials, and equipment including total stations, global positioning system (GPS), LiDAR scanning or other equipment.

2. Obtain written authorization from the Engineer documenting the affected work and requirements before performing work under these items.

3.3 COMPUTATIONS AND PLOTS

- A. Use cross-sections to calculate volume measurements.
 1. Superimpose final cross sections with original cross sections and calculate final quantities using the average end area method.
 2. Develop cross-sections from field measurements.
 - a. Take cross section measurements both before and after excavation and before backfill.
 - b. Take cross sections at a maximum centerline spacing of 15ft when the centerline curve radius is less than or equal to 500 ft.
 - c. Take cross sections at a maximum spacing of 30 ft when the centerline curve radius is greater than 500 ft.
 - d. Take additional cross sections at breaks in terrain and at changes in typical sections.
 - e. Measure and record points at breaks in terrain for each cross section but at least every 15 ft unless otherwise approved by the Engineer.
 - f. Measure and record points to at least the anticipated slopes and reference locations.
 - g. Reduce all cross section distances to horizontal distances from centerline.
 - h. Take cross sections at right angles to tangents and normal to curves.
 - i. Include in cross sections all grades, locations, and existing ground line profiles.
 3. May develop cross sections from digital terrain models provided if:
 - a. Ground survey locations do not exceed 50 ft in any direction.
 - b. Major horizontal and vertical breaks in terrain are also included.
 - c. Horizontal and vertical control for the project is used.
 - d. DTM is verified accurate to required tolerances as indicated in the UDOT Survey & Geomatics Standards manual by spot checking throughout the length of the project. Refer to <http://www.udot.utah.gov/go/standardsreferences> to view this manual.
- B. The Engineer may approve alternate methods of calculating quantities.

3.4 STAKE MAINTENANCE AND MARKINGS

- A. Provide and maintain reference/location stakes that identify stationing at least every 200 ft until all work has been completed and accepted by the Engineer for each alignment.
 - 1. Provide reference/location stakes at whole station intervals such as 1032+00.
- B. Maintain ALL staking necessary for the work until the construction has been completed and accepted by the Engineer.
 - 1. Legibly mark all survey stakes with station and offset referenced to their respective control line.
 - 2. Mark slope, reference, and guard stakes with station.
 - 3. Renew illegible or damaged stakes at no additional cost to the Department.

3.5 CONTROL POINTS AND SURVEY TOLERANCES

- A. Survey using the guidelines set in the UDOT Survey & Geomatics Standards manual.
 - 1. Refer to <http://www.udot.utah.gov/go/standardsreferences> to view this manual.
- B. Amend the survey control diagram as requested for the project.
 - 1. Have the amended diagram sealed, signed, and dated by a licensed surveyor in accordance with UC 58-22-601, 602, 603, and Utah Administrative Code R156-22-601.
 - 2. Refer to <http://www.udot.utah.gov/go/standardsreferences> for Utah Code and Utah Administrative Code.
- C. Relocate initial horizontal and vertical control points in conflict with construction to areas that will not be disturbed by construction operations.
 - 1. Furnish the coordinates and elevations for the relocated points before the initial points are disturbed.
 - 2. Furnish to the Region Surveyor or Engineer the coordinates and elevations for the relocated points before the initial points are disturbed.
- D. Protect benchmarks from construction activities.
 - 1. Position all benchmarks to allow a level rod to stand vertically and squarely on the mark.

- E. Reference benchmarks to centerline and horizontal measurements. The surveyor should, to the extent necessary to achieve the standards contained herein:
 - 1. Compensate or correct for systematic errors, including those associated with instrument calibration
 - 2. Select the appropriate equipment and methods, and use trained personnel.
 - 3. Use appropriate error propagation and other measurement design theory to select the proper instruments, field procedures, geometric layouts and computational procedures to control random errors.

- F. The surveyor will apply appropriate procedures in order to assure that the allowable positional tolerance of such points is not exceeded if radial survey methods, GPS or other acceptable technologies or procedures are used to locate or establish points on the survey.

- G. The positional tolerance may be tested by:
 - 1. Comparing the relative location of points in a survey as measured by an independent survey of equal or higher accuracy or,
 - 2. The results of a minimally constrained, correctly weighted least squares adjustment of the points on the survey.

- H. The surveyor will employ, in his judgment, proper field procedures, instrumentation and adequate survey personnel in order to achieve a precision of 0.02 feet (or 6 mm) + 20 ppm.
1. See Table 1 for construction staking tolerances.

Table 1

CONSTRUCTION STAKING TOLERANCES		
Description	Horizontal	Vertical
	Decimals of a foot	
Box Culverts	± 0.02	± 0.02
Bridge Superstructures	± 0.02	± 0.02
Bridge Substructures	± 0.02	± 0.02
Clearing and Grubbing Stakes	± 1.00	-----
Construction Centerline Control	± 0.05	-----
Construction Centerline Station	± 0.10	-----
Curbs, Walks, and Bike Paths	± 0.03	± 0.02
Grade Stakes – Roadway Subgrade	± 0.20	± 0.05
Grade Stakes – Top of Rock	± 0.20	± 0.03
Grade Stakes – Roadway Finish	± 0.10	± 0.02
Luminaire and Signal Poles (incl.	± 0.20	± 0.20
Manholes, Inlets, and Culverts	± 0.10	± 0.03
PCC Pavement	± 0.10	± 0.02
Slope Stakes and References	± 0.30	± 0.10
Traffic Markings	± 0.20	-----
Walls – Retaining, MSE, Sound, etc.	± 0.05	± 0.05
Wetland Mitigation Control Stakes	± 0.20	± 0.20

Notes:

1. Stakes for miscellaneous items not listed above will have a horizontal and vertical tolerance of 0.20 ft, unless otherwise directed.
2. Features that are to be constructed flush to another surface should take on the same tolerance as that surface.
3. Staking tolerances for special circumstances will be discussed at the pre-survey meeting.
4. Meet the appropriate construction tolerances for the material as specified in the special provisions or standard specifications, regardless of the construction staking tolerances, specific to the work item.
5. Use bridge control once established, independent of other project controls for the duration of the bridge construction. Refer to Survey & Geomatics Standards manual for bridge control methodology. Refer to <http://www.udot.utah.gov/go/standardsreferences>.
6. Tolerances stated for each type of construction stake in this table indicates the acceptable deviation of the position of each reference point from its computed position relative to the given alignment and grade. Staked positions are generally checked using electronic stakeout reports and, if within tolerances, the stated position is accepted. Reference points may also have an accuracy relative to each other for precise measurements such as structures.

2. Survey Staking Methods:
 - a. Furnish reference stakes for all slope stakes and stakes used for setting items for work.
 - b. Furnish the following for projects using Conventional Survey Methods:
 - 1) Maintain the reference stakes for the duration of the project until the Engineer approves removal.
 - 2) Establish and set slope stakes and references on both sides of centerline at cross section locations.
 - a) Place slope stakes at a maximum centerline spacing of 25 ft when the centerline curve radius is less than or equal to 500 ft.
 - b) Place slope stakes at a maximum spacing of 50 ft when the centerline curve radius is greater than 500 ft.
 - c) Place reference stakes at a maximum centerline spacing of 100 ft on tangents.
 - 3) Establish slope stakes in the field as the actual point of intersections of the design slope with the natural ground line.
 - 4) Set slope stake references outside the clearing limits.
 - 5) Include all reference point and slope stake information on the reference stakes.
3. Furnish the following for projects using Machine Control Guidance Methods:
 - a. Maintain the reference stakes for the duration of the project until the Engineer approves removal.
 - b. Establish and set location stakes and references on one side of centerline at cross section locations.
 - 1) Place cross section stakes at a maximum spacing of 300 ft. (Cross-section stakes reference physical points in the proposed cross-section, such as edge of pavement or top back of curb)
 - c. Place slope stakes at a maximum spacing of 300 ft.
 - d. Establish slope stakes in the field at the actual point of intersections of the design slope with the natural ground line.
 - e. Set slope stake references outside the clearing limits.
 - f. Include all reference point information on the reference stakes.
 - g. Provide adequate bench marks throughout the project for construction equipment equipped with MCG to check setup and tolerances.
 - 1) Perform equipment checks at least once per day.
 - 2) Record equipment checks in a log for verification by the Engineer.

4. Staking limits – Reference/Location stakes can serve the purpose of the following staking requirements as long as all required information for both purposes can be written on the stake.
 - a. Stake clearing limits on both sides of centerline at each established station.
 - 1) Locate the clearing limit on the ground as shown by the cut and fill limits on the plans.
 - b. Stake right of way limits, or temporary construction easement (TCE) if one exists, every 500 ft maximum on tangents, every 250 ft maximum on curves where ROW is not delineated by existing fence lines or other obvious boundaries.
 - 1) Stake Right of Way limits at all right of way break/angle points along the right of way lines.
 - 2) Reduce the distance if staking distance is affected by line of sight.
 - c. Stake environmental control limits on both sides of centerline at each established station.
 - 1) Locate the environmental control limits on the ground as shown by the slope rounding contours and environmental and silt fence locations as shown on the Plans.
 - 2) Stake environmental control limits every 25 ft in environmentally sensitive areas.
 - 3) Provide staking as needed to guarantee the silt fence is located inside of right of way in standard silt fence installations where stations/locations are not called out on the environmental control plan sheets,.
- I. Furnish reference stakes for all slope stakes and stakes used for setting items for work.
 1. Accomplish the following for projects using ground based total stations, robotics, and levels. (Conventional Survey):
 - a. Maintain the reference stakes for the duration of the project until the Engineer approves removal.
 - b. Establish and set slope stakes and references on both sides of centerline at cross section locations.
 - c. Place reference stakes at a maximum centerline spacing of 100 ft on tangents.
 - 1) Place slope stakes at a maximum centerline spacing of 25 ft when the centerline curve radius is less than or equal to 500 ft.
 - 2) Place slope stakes at a maximum spacing of 50 ft when the centerline curve radius is greater than 500 ft.

- c. Establish slope stakes in the field as the actual point of intersections of the design slope with the natural ground line.
 - d. Set slope stake references outside the clearing limits.
 - e. Include all reference point and slope stake information on the reference stakes.
2. Accomplish the following for projects using Machine Control Guidance Methods:
- a. Maintain the reference stakes for the duration of the project Survey until the Engineer approves removal.
 - b. Establish and set location stakes and references on one side of centerline at cross section locations.
 - 1) Place cross section stakes at a maximum spacing of 300 ft.
 - a) Cross-section stakes reference physical points in the proposed cross-section, such as edge of pavement or top back of curb.
 - c. Place slope stakes at a maximum spacing of 300 ft.
 - d. Establish slope stakes in the field as the actual point of intersections of the design slope with the natural ground line.
 - e. Set slope stake references outside the clearing limits.
 - f. Include all reference point information on the reference stakes.
 - g. Provide adequate bench marks throughout the project for construction equipment equipped with MCG to check setup and tolerances.
 - 1) Perform equipment checks at least once per day.
 - 2) Record equipment checks in a log for verification by the Engineer.
- J. Setting grade finishing stakes (Conventional Survey or RTK):
- 1. Grade elevations and horizontal alignment:
 - a. On centerline.
 - b. On each shoulder at roadway cross section locations and between centerline and shoulder with a maximum spacing of 25 ft.
 - c. At the top of sub grade and the top of each aggregate course.
 - 2. Locations:
 - a. Set stakes on centerline, on each normal shoulder, and on the shoulder of the turnout where turnouts are constructed.
 - b. Set hubs at the center and along the edges of parking areas.
 - c. Set stakes in all ditches to be paved.
 - 3. Maximum spacing between stakes along the alignment is 50 ft.
 - 4. Use brushes or guard stakes at each grade finishing stake.
 - 5. Reset grade finishing stakes as many times as necessary to construct the sub grade and each aggregate course.

- K. Grade Verification (Machine Control Guidance)
 - 1. The following procedure will only be applicable for verification of roadway layers for grade elevations and horizontal alignment.
 - a. The Department will use the Contractor provided survey equipment listed above.
 - b. The Department will verify elevations at the following locations:
 - 1) On centerline.
 - 2) On each shoulder at roadway cross section locations and between centerline and shoulder with a maximum spacing of 25 ft.
 - 3) At the top of sub grade and the top of each aggregate course.
 - 2. Locations:
 - a. On centerline, on each normal shoulder, and on the shoulder of the turnout where turnouts are constructed.
 - b. At the center and along the edges of parking areas.
 - c. At the top of subgrade and the top of each aggregate course.
 - d. In all ditches to be paved.
 - 3. The Department will verify and document elevations at a 300 ft maximum spacing between locations along the alignment.
 - a. The Department reserves the right to increase the spacing between grade verification locations up to, but not to exceed, 1000 ft if a level of confidence can be attained by the Engineer.

3.6 CONCRETE PAVING

- A. Develop a method of horizontal and vertical control for the placement of concrete pavement.
 - 1. Use laser, wire, or string line, for example, to maintain horizontal and vertical control.
 - 2. Maximum spacing, 50 ft Set control on both sides of roadway.
- B. 3D Paving, Machine Control Guidance, Wireless Paver
 - 1. Survey control should be staggered on either side of the highway to provide a good strength of figure.
 - a. Typically the distance between control points set for MCG should be no farther than 650 ft. The actual distance may vary by the type of equipment used by the Contractor.
 - b. The instrument setup must obtain vertical accuracies within ± 0.02 ft of the existing control.
- C. Stake concrete joint and station stamp locations if requested by the Engineer.

3.7 DRAINAGE STRUCTURES

- A. Stake drainage structures to fit field conditions and in coordination with the Engineer. The location of the structures may differ from the plans.
 - 1. Survey and record the ground profile along the centerline of the structure.
 - 2. Determine the slope catch points at inlets and outlets.
 - 3. Set reference points and record information necessary to determine structure length and end treatments.
 - 4. Stake ditches or grade to make the structure functional.
 - 5. Plot the profile along centerline of the structure to show the natural ground, the flow line, the roadway section, and the structure.
 - 6. Mark guard stakes with the following, when applicable:
 - a. Diameter, length, and type of culvert such as 18 inch x 35 ft corrugated metal pipe (cmp)
 - b. The vertical and horizontal distance from the hub to the invert at the end of the culvert or any intermediate point as needed or directed
 - c. Flow line grade of the pipe
 - d. Station
 - 7. Provide a reference at a maximum spacing of 50 ft for storm sewers and waterlines. Reference inverts of pipe at all manholes.

3.8 BRIDGES

- A. Based upon the Projects Primary Control points, set at least 4 horizontal and vertical control reference points to be used for surveying all bridge substructure and superstructure components including but not limited to pile locations and cutoffs, line and grade for abutments, bents, beam seats, anchor bolts, and screed grades.
- B. Set intermediate slope stakes at bridge abutments to establish transitions.
 - 1. Place finish grade stakes on the centerline of abutment bearing and at the top of slope of all bridge berms.
 - 2. Place finish grade stakes on each side at top, mid-point, or slope and toe of fill.

3.9 BOX CULVERTS

- A. Set horizontal and vertical control and reference points.
 - 1. Establish and reference the centerline, back of parapet or barrier, skew, and flow line elevations at inlet, outlet, and breaks.

3.10 CURB AND GUTTER

- A. Set curb and gutter staking at 25 ft intervals on tangent and 10 ft intervals on curve radii.
- B. Set line and grade for curb and gutter within 0.02 ft of the proposed or established grade line.

3.11 GUARDRAIL

- A. Stake guardrail vertical and horizontal control at a maximum spacing of 25 ft on tangent sections and 10 ft on curved sections unless otherwise approved.
- B. Obtain the Engineer's approval and field verification of staking before installation.

3.12 EXISTING SURVEY MONUMENTS

- A. Locate and reference all private and public land survey monuments that may be destroyed by project construction activities before disturbing those existing monuments and under the direction of a Professional Land Surveyor licensed in the State of Utah.
- B. Complete referencing and reestablishing those existing monuments at no cost to the Department and before project completion.
- C. Reference and reestablish the monuments created by the county surveyor.
 - 1. Notify the county surveyor at least 30 days before the destruction of any monument.
 - 2. Coordinate the reestablishment of section corner and quarter corner monuments with the county surveyor.
 - 3. Prepare a corner record to be filed in the office of the County Surveyor's Office per Utah State Code 17-23-17.5 unless prepared by the County Surveyor's Office.
 - 4. Submit a certified supplement to the Survey Control Sheet with notes to the Engineer showing references to section corners and quarter corners.
- D. The Department pays for the additional work under the Directed Survey item if a monument is found during construction but is not shown on the contract plans and must be reset.

3.13 RETAINING WALLS

- A. Set horizontal and vertical control and reference points based upon the Projects Primary and Secondary control.
 - 1. Establish and reference the centerline offsets for the walls, radius points, and the beginning and ending wall locations as shown on the plans.
- B. Stake retaining wall vertical and horizontal control at a maximum spacing of 25 ft on tangent sections and 10 ft on curved sections unless otherwise approved.

3.14 PAVEMENT MARKING

- A. Layout all temporary and permanent pavement markings according to Section 02765.
 - 1. Place references for traffic striping at least 150 ft apart on tangents and at least 50 ft on curves.

3.15 CLEANUP

- A. Remove and dispose of all flagging, lath, stakes, and other staking material after the project is complete.

3.16 UTILITIES

- A. Stake control lines as needed in cooperation with the utility companies so their facilities can be relocated to their proper final position.
- B. Stake crossings or potential points of conflict between facilities to give proper horizontal and vertical control for the relocation.
- C. Schedule this survey work with the utility companies to minimize delays and disruption of survey stakes.
- D. Replace all disturbed stakes as necessary to facilitate the relocations.
- E. The Contractor is responsible for costs incurred to relocate any utility more than once due to inaccurate or incomplete staking.
- F. Collect survey grade coordinate data for all exposed, relocated, and new utilities during construction.
 - 1. Collect data in one foot intervals unless otherwise directed in the UDOT Survey & Geomatics Standards manual. Refer to <http://www.udot.utah.gov/go/standardsreferences>.

3.17 EXISTING MILEPOST SIGNS

- A. Locate all existing milepost sign stations within the project limits.
 - 1. Contact the Engineer to determine any locations where a milepost sign was placed at a point other than the actual mile point due to prior physical limitations such as driveways, intersections, or bridge parapets, in coordination with Highway Referencing Specialist of the Asset Management Division.

- B. Reestablish location of milepost signs before project completion if construction activities required removal of any existing milepost signs.
 - 1. Reset sign location at original station of existing sign.
 - a. Exceptions
 - 1) Any prior physical limitations listed in this Section, Article 3.17, paragraph A were removed during construction and no longer prevent installation of a sign at the actual mile point.
 - 2) Roadside conditions or newly constructed physical limitations would prevent reestablishment of any milepost sign within 3 ft of its original station.
 - b. Contact the Engineer to determine how to proceed in either of these special cases in this Section, Article 3.17, paragraph B1a, in consultation with the Highway Referencing Specialist.
 - 2. Establish an appropriate offset for each milepost sign to meet installation and clear zone requirements.

- C. Contact the Highway Referencing Specialist through the Engineer to determine the preferred action for reestablishing the milepost signs where the alignment of the roadway was modified during construction to the extent that the new measured mile point locations of any milepost signs were shifted more than 10 ft from their original location.

Delete Article 1.5 and replace with the following:

1.5 SUBMITTALS

- A. Rapid Set® Cement Mix design to be used
 - 1. Mix designs will be approved based on results of trial batches.
 - a. Verify requirements listed in section 2.3.
 - b. Perform 4 hour and 24 hour compressive strength tests.
 - 2. Use the same components in the trial batches that will be used in the project. The Contractor assumes responsibility for the compatibility of all admixtures with the mix design and their potential effects on concrete properties.
 - 3. Personnel performing and witnessing trial batches and performing compressive and flexural strength testing must be Department TTQP Concrete and Concrete Strength Testing qualified.
 - 4. The Department or its representative may witness the trial batch.

5. Mix concrete trial batches as specified in UDOT Materials Manual of Instruction 974: Guidelines for Portland Cement Concrete Mix Design.
6. Compressive and flexural strength testing for verification of trial batches will be performed by an AASHTO accredited laboratory, approved through the Department Laboratory Qualification Program.

Add Article 1.6

1.6 ACCEPTANCE

- A. Rapid Set® Cement
 1. Compressive Strength Test
 - A. Cast in accordance with AASHTO T23 and test in accordance with AASHTO T 22. One compressive strength test consists of a set of three cylinders.
 - B. One determination per production day.
 1. Test between 4 and 24 hours after casting.

Add Article 2.3

2.3 Rapid Set® Cement

- A. Air Entrainment according to AASHTO M 154, including Section 5
 1. 5.0 – 7.5 percent air content
- B. 4 hour compressive strength per AASHTO T22
 1. 4000 psi minimum
- C. 24 hour flexural strength per AASHTO T97
 1. 650 psi minimum
- D. 1 day bond strength per ASTM C822-99:
 1. 1200 psi minimum
- E. Refer to manufacture specifications for additional requirements

Delete Article 3.1, paragraph A and replace with the following:

- A. Contractor Options
 1. Remove the cover and frame and raise the box using concrete.
 2. Raise the box using precast concrete manhole sections.
 3. Remove the cover and frame and raise the box using a Rapid Set® Cement mix.
 - a. Use a UDOT certified volumetric mixer

- b. Mix place and cure per manufacture's recommendations
 - c. Protect from traffic for 4 hours after initial set
4. Raise the frame and cover using adjustable extension rings.

SECTION 02056M

EMBANKMENT, BORROW, AND BACKFILL

Delete Article 1.3, paragraph G and replace with the following:

- G. UDOT Materials Manual of Instruction
- H. UDOT Minimum Sampling and Testing Requirements

Delete Article 1.4, paragraph A and replace with the following:

- A. Well-graded material – Material having an even distribution of different particle sizes. This even distribution of particles of different sizes results in a dense mass upon compaction.

Delete Article 1.5, paragraph A, and replace with the following:

- A. Provide the following before delivering material to the project:
 - 1. Supplier and source of materials.
 - 2. Gradation analysis. Refer to AASHTO T 27 and T 11.
 - 3. Soil classification when applicable. Refer to AASHTO M 145.
 - 4. Maximum Dry Density and Optimum Moisture Determination
 - a. Use AASHTO T 180 Method D for A-1 soils and AASHTO T 99 Method D for all other soils.

Delete Article 1.6, paragraph C, and replace with the following:

- C. Density Requirements – Acceptance is on a lot-by-lot basis.
 - 1. Meet minimum density test average of 96 percent of maximum laboratory density with no single determination lower than 92 percent.
 - a. Use AASHTO T 180 Method D for A-1 soils and AASHTO T 99 Method D for all other soils.
 - b. Maintain appropriate moisture for compaction during processing.
 - 2. Meet 100 percent of established field density for free-draining granular backfill or for material with more than 30 percent retained on the $\frac{3}{4}$ inch sieve.
 - a. Develop a field density compaction curve according to UDOT Materials Manual of Instruction Section 989 and approved by the Engineer.

Delete Article 2.9, and replace with the following:

2.9 PIPE FOUNDATION, BEDDING, AND BACKFILL

- A. Pipe Foundation (When Required)
 - 1. Classification A-1. Refer to AASHTO M 145.
 - 2. Use suitable backfill material or granular backfill borrow when directed by Engineer.
 - 3. Use Free-Draining Granular Backfill or other uniformly graded materials only with the approval of the engineer and only if enclosed with an appropriate drainage geotextile. Refer to Section 02075.
 - 4. Over excavate and replace unsuitable materials according to Section 02317 when directed by the Engineer.

- B. Pipe Bedding and Backfill
 - 1. Classification A-1. Refer to AASHTO M145.
 - 2. Non-plastic, well-graded material.
 - 3. Maximum aggregate size is 1½ inches for plastic pipe, 2 inches for all other pipes.

- C. Other materials or trench configurations for pipe bedding and backfill may be used only upon approval of the Contractor's engineering proposal. Proposals using this option may include the use of native material or uniformly graded materials enclosed in an appropriate drainage geotextile. The Department decides whether or not to consider or approve the Contractor's engineering proposal. Any proposal must include all of the following:
 - 1. Stamped drawings and specifications signed and sealed by a Professional Engineer licensed in the state of Utah.
 - 2. Evaluation of site specific conditions and surrounding soils, including potential for migration of fines.
 - 3. A structural evaluation of the pipe support system for the proposed pipe that includes the pipe structural capacity and the depth of fill.
 - 4. Complete bedding or backfill source information including gradation, soil classification, and laboratory testing reports.

Delete Article 3.3, paragraphs C and D and replace with the following:

- C. Structural Backfill Placement includes bridges, foundation, box culverts, drains, and other structures.
 - 1. Place suitable backfill material in structural backfill sections. Refer to Section 02317.
 - a. Use granular backfill borrow when specified.
 - 2. Use appropriate compaction equipment adjacent to abutments, backwalls, approach slabs, wing walls, retaining walls, and other structures.

- D. Pipe Foundation, Bedding, and Backfill
 - 1. Refer to Section 02317 and DG Series Standard Drawings for excavation and over-excavation requirements.
 - 2. Imported material for pipe bedding and pipe backfill and embankment in the pipe trench are incidental when constructed according to the plans and specifications. No separate measurement or payment for these items will be made except for pipe foundation work or other over-excavation of unsuitable material beyond the limits indicated in the contract.
 - 3. Place uniform layers of pipe backfill on both sides of the pipe.
 - 4. Use compaction equipment smaller than the trench width between the pipe and the trench wall. Expand the width of the trench to accommodate necessary compaction equipment.
 - 5. Fully compact the haunch areas. Hand-tamp areas where compaction equipment cannot compact the soil.

2012 Standard Specification Book**

SECTION 02075M

GEOTEXTILES

Delete Article 1.5 and replace with the following:

1.5 SUBMITTALS

- A. Certification that the supplied material was manufactured, sampled, tested, and inspected in accordance with AASHTO M 288.
- B. Manufacturer's data sheet and recommended installation instructions.

Delete Article 1.6 and replace with the following:

1.6 SAMPLING AND TESTING Not Used

Delete Article 2.3 and replace with the following:

2.3 DRAINAGE GEOTEXTILE

- A. Furnish Class 2 nonwoven drainage geotextile according to AASHTO M 288.

Delete Article 3.4 and replace with the following:

3.4 INSTALL DRAINAGE GEOTEXTILE

- A. Install at locations shown on the drawings or as designated by the Engineer.
- B. Place and secure geotextile to provide direct contact against the excavated surface.
- C. Overlap successive sheets of geotextile at least 1 ft in the down-gradient direction of flow.
- D. Overlap geotextile at least 1 ft at the top of the trench, where applicable.

- E. Place fill beginning with the sheets overlapped above subsequent sheets to hold geotextile in place.
- F. Repair – Place patch over damaged area and extend 3 ft beyond the perimeter of the tear or damage.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 02316M

ROADWAY EXCAVATION

Delete Article 3.5, paragraph C and replace with the following:

- C. Remove material in all cut sections to the depth shown. Scarify to an 8 inch depth and compact subgrade to at least 90 percent of maximum laboratory density before placing pavement section.

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 02727S

CEMENT-TREATED ASPHALT BASE (CTAB)

Add Section 02727:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Mill/pulverize existing asphalt, mix with Portland Cement, compact, and cure.
 - 1. Mill/pulverize the existing asphalt and re-grade as necessary for vertical profiling.

1.2 RELATED SECTIONS

- A. Section 02748 – Prime Coat/Tack Coat
- B. Section 03055 – Portland Cement Concrete

1.3 REFERENCES

- A. AASHTO T 27/T 11: Sieve Analysis of Course and Fine Aggregates.
- B. AASHTO T 255: Total Moisture Content of Aggregate By Drying
- C. ASTM C593: ASTM CD93-05 Standard Specification for Fly Ash and Other Pozzolans for Use With Lime for Soil Stabilization.
- D. ASTM D 4832: Standard Test Method for Preparation and Testing of Controlled Low Strength Material (CLSM) Test Cylinders.
- E. ASTM D 1633: Standard Test Method for Compressive Strength of Molded Soil-Cement Cylinders.

1.4 DEFINITIONS

- A. Lot: One day's production for processed asphalt treated base.

1.5 SUBMITTALS

- A. Submit Quality Control Plan for Engineer's approval before commencing reclamation operations, addressing, at a minimum, the following items:
 - 1. Pulverizing equipment with direction of pulverizing process.
 - 2. Line and grade control.
 - 3. Depth of reclamation process.
 - 4. Maximum aggregate size requirements.
 - 5. Determination and control of moisture content before the cement reclamation process.
 - i. Anticipated optimum moisture is between 4 and 7 percent.
 - ii. Verify water content a minimum of twice per day.
 - 6. Determination and control of cement and water content, including the selected cement for use in testing. This is expected to be a cooperative effort between the Department and the Contractor. The determination of the cement content will include evaluations at 3%, 4% and 5% by weight of treated material. Determination of cement content will include 500 foot test sections outside the travel lanes and unconfined compressive strength testing.
 - 7. Compaction of the CTAB.
 - 8. Moisture cure for the CTAB.
- B. Daily verification of designed cement and water application rates.

1.6 ACCEPTANCE

- A. Cooperate with the Department for testing of the following:
 - 1. Contractor to verify maximum particle size in the presence of UDOT personnel four times per day, as directed by the Engineer.
 - 2. Twice daily, develop or verify of a rolling pattern using the nuclear density gauge.
 - a. The rolling pattern will be established using a graphical comparison between roller passes and density measured.
 - b. Continue rolling and testing until the rolling pattern reaches its maximum density. To be sure this is a sufficient degree of compaction, make one additional roll over the entire surface and test again.
- B. Two unconfined compressive strength tests per lot in accordance with ASTM C593 and D1633. The samples should be subjected to vacuum saturation prior to USC testing. Seven day UCS values must be between 300 psi and 500 psi. Replace, retreat, rework, re-grade and/or trim any section that does not meet the strength requirement, as directed by the Engineer.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Cement
 - 1. Portland Cement, Type I or Type II, per Section 03055 Portland Cement Concrete.
- B. Milled/Pulverized Asphalt Base Course: Imported rap or the material remaining on the grade after the initial pulverization process and prior to the addition of Binding Agent.
 - 1. The material must meet the following gradation requirements:

Sieve Size	Percent Passing by Dry Weight
2 in.	100

- C. Treated Mixture – Blend of pulverized existing asphalt base, cement and water at the specified percentages.
- D. Prime Coat per Section 02748 – Prim Coat/Tack Coat

PART 3 EXECUTION

3.1 PREPARATION

- A. Rotomill the existing asphalt surface and grade as needed to meet line and grade.
- B. Pulverize and blend the existing asphalt to provide a minimum depth of four inches of CTAB, meeting the material requirements of section 2.1.
- C. Use a machine of pug mill type, auger type, or cross shaft type mixer capable of providing a homogeneous mixture throughout the material to the depth specified. Direction of process should be downward.
- D. Grade the pulverized surfacing to uniform profile and cross-slope with surface deviations not greater than $\pm 3/8$ inch in 10 feet. Replace, retreat, rework, re-grade and/or trim any section that does not meet uniform line, grade, and cross-slop as directed by the Engineer.
- E. Perform profile and grade verification at a frequency of 100 ft. on tangents and 50 ft. on curves.

3.2 PROPORTIONING AND MIXING

- A. Add cement at the determined rate.
 - 1. Furnish cement in bulk, using equipment with a calibrated meter to add the cement to the pulverized existing asphalt base.
 - 2. Make cement percentage verification available to the Engineer.
 - 3. Provide a compressive strength between 300 psi and 500 psi at 7 days as determined by ASTM D1633.
- B. Use a machine of a pug mill type, auger type, or cross-shaft type mixer capable of providing a homogeneous mixture throughout the material to the depth specified.
- C. Use a machine capable of introducing water at the time of mixing, through a metering device. Apply water by control that will supply the correct quantity of water to produce a completed mixture with a uniform moisture content.
- D. Cease production if equipment begins to leak. Repair or replace the equipment immediately. Replace, retreat, rework, re-grade and/or trim contaminated material as directed by the Engineer.
- E. To minimize fugitive dust, keep a maximum of 300 feet between the binding agent distribution machine and the machine introducing water. Do not place binding agent in conditions where average wind speed is greater than 10 mph.

3.3 COMPACTION AND FINISHING

- A. Use a roller, or rollers, sufficient to uniformly compact the cement treated mixture.
- B. Complete initial rolling of the mixture within 30 minutes of addition of the cement and water. Complete initial finishing and compaction within 2 hours of the time the water and cement are added.
- C. Finish treated mixture surface to uniform line, grade, and cross-slope with surface deviations not greater than $\pm 3/8$ inches in 10 feet. Replace, retreat, rework, re-grade and/or trim any section that does not meet uniform line, grade and cross-slope as directed by the resident engineer. If necessary, grind or trim the surface after cement has set.

3.4 PROTECTION AND CURING

- A. Keep the surface of the compacted mixture moist for at least 72 hours or until the application of Prime Coat.

- B. Apply Prime Coat according to specification 02748.

3.5 LIMITATIONS

- A. Do not proceed or continue with process during rain or other adverse weather conditions.
- B. Do not allow construction traffic on the surface for a minimum of 72 hours.
- C. Protect the surface of the pulverized surfacing from damage due to construction traffic. Replace, retreat, rework, and re-grade any damaged areas prior to continuing with the roadbed processing as directed by the Engineer.
- D. Protect material from freezing and frost for a period of 5 days after placing.

END OF SECTION

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 02737S

PAVEMENT SOFT SPOT REPAIR

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Remove and replace soft spots in the existing pavement section, as directed by the Engineer.

1.2 RELATED SECTIONS

- A. Section 02075: Geotextiles
- B. Section 02721: Untreated Base Course
- C. Section 02741: Hot Mix Asphalt
- D. Section 02742S: Project Specific Surfacing Requirements
- E. Section 02748: Prime Coat/Tack Coat

1.3 REFERENCES Not Used

1.4 DEFINITIONS Not Used

1.5 SUBMITTALS Not Used

1.6 ACCEPTANCE

- A. Untreated Base Course
 - 1. One in place density test per lift per repair
 - 2. Measure density using a nuclear density gauge.

3. Compact material to a minimum 92 percent of the maximum laboratory density.
- B. Hot Mix Asphalt
1. One in place density test per lift per repair.
 2. Compact material to a minimum 92 Percent of maximum specific gravity.

PART 2 PRODUCTS

2.1 GEOTEXTILES

- A. Refer to Section 02075.

2.2 UNTREATED BASE COURSE

- A. Refer to Section 02721.

2.3 HOT MIX ASPHALT

- A. Refer to Section 02741 for mix design and material requirements.
- B. Refer to Section 02742S for project specific requirements.
- C. Refer to Section 02748 for tack coat requirements.

PART 3 EXECUTION

3.1 REMOVE DETERIORATED ASPHALT SURFACING

- A. Remove deteriorated asphalt a minimum of 6 inches or as determined by the Engineer. Remove by rotomilling or saw cutting and excavating.
1. If rotomilling the minimum patch width is 6 feet in all directions.
 - a. Mill must be at least 6 feet wide
 2. If saw cutting and excavating the minimum patch width is 3 feet in all directions.
 3. Remove material without damaging the surrounding pavement.

3.2 BASE COURSE REQUIREMENTS FOR TYPE A REPAIR

- A. Grade and compact the existing base course surface.
1. Use the largest piece of vibratory or impact compaction equipment possible.

2. Continue compaction until additional work does not improve the density measured using a nuclear density gauge.

3.3 BASE COURSE REQUIREMENTS FOR TYPE B REPAIR

- A. Excavate and remove 8 inches of existing base course.
- B. Grade and compact the existing base course surface.
 1. Use the largest piece of vibratory or impact compaction equipment possible.
 2. Continue compaction until additional work does not improve the density measured using a nuclear density gauge.
- C. Install a geotextile separation fabric meeting the requirements of Section 02075.
- D. Place new Untreated Base Course meeting the requirements of Section 02721.
- E. Grade and compact the new base course
 1. Place in layers of uniform thickness and compact each layer to a thickness not to exceed a 6 inch depth.

3.4 PLACE AND COMPACT HOT MIX ASPHALT

- A. Remove all loose material and clean vertical edges
- B. Tack all bituminous surfaces according to Section 02748.
- C. Place and compact Hot Mix asphalt conforming to Section 02741 and Section 02742S to within $\frac{1}{4}$ " of the existing pavement surface.
 1. Place in layers of uniform thickness and compact each layer to a thickness not to exceed a 4 inch depth.

Enter table in the appropriate “number of tests” column and round down to the nearest value.

Delete Article 2.4, and replace with the following:

2.4 RECLAIMED ASPHALT PAVEMENT (RAP) (Optional)

- A. Do not adjust the asphalt binder grade if the lower end is already a PG XX-34.
- B. Do not adjust the asphalt binder grade when RAP content is not more than 15 percent by total weight of the hot mix and RAP asphalt binder content is not more than 15 percent of the total asphalt binder content by weight.
- C. Adjust asphalt binder grade according to AASHTO M 323 when RAP asphalt binder content is between 15 to 25 percent of the asphalt binder weight.
 - 1. Select one grade softer than the grade specified. Do not adjust the asphalt binder grade if the lower end is already a PG XX-34.
 - 2. Provide test reports indicating that the PG grade and quantity of the recovered asphalt binder is consistent throughout the stockpile.
 - 3. Limit RAP to 25 percent of the total weight of the hot mix and RAP binder to 25 percent of the total binder.
- D. RAP aggregate is required to meet Table 5 with exception of Sand Equivalent. Refer to AASHTO T 176.

Add Article 2.6, paragraph A3 and A4:

- 3. Delete the first bullet of paragraph 960.04 in UDOT Materials Manual of Instruction 960.
- 4. Delete “SSD” from GsbSSD – fine and coarse aggregate specific gravities – AASHTO T 84 and T 85 of paragraph 960.05.02 in UDOT Materials Manual of Instruction 960.

Delete Table 8 and replace with the following:

Table 8

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 02742S

PROJECT SPECIFIC SURFACING REQUIREMENTS

Add Section 02742:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Required PG Asphalt or emulsion
- B Required minimum asphalt content for SMA mixes
- C. Number of gyrations to use for Superpave Mix Design
- D. PCCP Pavement Texture Type

1.2 RELATED SECTIONS Not Used

1.3 REFERENCES Not Used

1.4 DEFINITIONS Not Used

1.5 SUBMITTALS Not Used

1.6 ACCEPTANCE

- A. Pavement Smoothness Incentives/Disincentives.

Table 1

Incentives and Disincentives for Category 1 Pavements		
MRI Range (inches/mile by pavement section)	Dollars/Pavement Section	
	Asphalt Pavements	Portland Cement Concrete
≤ 40.0	\$750	\$1500
40.1 - 50.0	\$500	\$1000
50.1 – 60.0	\$250	\$500
60.1 – 70.0	0	0
70.1 – 80.0	-\$250	-\$500
80.1 – 90.0	-\$500	-\$1000
>90.0	Corrective Action	

Table 2

Incentives and Disincentives for Structure Sections	
MRI Range (inches/mile by structure section)	Dollars/Structure Section
≤ 40.0	\$1500
40.1 - 50.0	\$1000
50.1 – 60.0	\$500
60.1 – 70.0	0
70.1 – 80.0	-\$500
80.1 – 90.0	-\$1000
>90.0	Corrective Action

B. Localized Roughness Limits

Table 3

Localized Roughness Limits	
Roadway	IRI w/base length of 25 ft. (in./mile)
Bridge decks, approach slabs & transitions, manholes and valves	≤ 250
Non-interstate	≤ 190
Urban roadways with speed limits less than 45 mph	≤ 190
Shoulders and Bike Lanes	≤ 250 (single profile)

PART 2 PRODUCTS

2.1 MIXES

- A. Hot Mix Asphalt (HMA): (Refer to bid item for size)
 - 1. PG 64-34 Asphalt
 - 2. $N_{\text{initial}} 7 N_{\text{design}} 75 N_{\text{final}} 115$

- B. Stone Matrix Asphalt (SMA):
 - 1: Minimum Asphalt Content 6.0 as a percentage of the total mix.

PART 3 EXECUTION Not used

END OF SECTION

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 02744S

STONE MATRIX ASPHALT (SMA)

Add Section 02744:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Products and procedures for laying and compacting a surface course of one or more layers of fiber stabilized SMA comprised of aggregate, asphalt binder, lime, and other additives.

1.2 RELATED SECTIONS

- A. Section 01452: Profilograph and Pavement Smoothness

1.4 DEFINITIONS Not Used

1.5 SUBMITTALS

- A. Mix design at least 10 working days before paving according to the UDOT Materials Manual of Instruction 960.
- B. Verification that hydrated lime meets the requirements of Section 02746.

- C. Verification that asphalt binder meets the requirements of Section 02745.
- D. Changes in job mix design
 - 1. Submit a written request for any proposed change in the job-mix gradation.
 - a. Allow at least 12 hours for approval before incorporating a minor target change into production.
 - b. Allow at least six working days for verification and approval of any other change.
 - 2. Include documentation supporting correlation between suggested target changes and mix design volumetric requirements. Department acceptance test results or Contractor QC test data or both are acceptable.
 - 3. Submit samples according to the UDOT Materials Manual of Instruction 960 for a volumetric mix design verification for anything other than approved minor target changes, as defined in Section 02741. This includes changes in the aggregate source, asphalt binder source, or asphalt binder grade.
- E. Corrective action plan according to Section 02741 and this Section, Article 1.6 paragraph G2.
- F. Refer to this Section, Article 1.7 paragraphs B and C for laboratory correlation submittals.
- G. Refer to this Section, Article 2.4 paragraph B for volumetric mix design.
- H. Refer to this Section, Article 2.4 paragraph H for sample submittals.
- I. Refer to this Section, Article 2.6 for contractor initiated changes in stone matrix asphalt mix design.

1.6 ACCEPTANCE

- A. A lot equals the number of tons of SMA placed during each production day. The Department will:
 - 1. Divide each lot into four sublots based on the scheduled production day.

2. Take random samples from the plant (UDOT Materials Manual of Instruction Part 8-984: Sampling Methods), and determine random numbers/locations from a random numbers table or generator. (UDOT Materials Manual of Instruction Part 8-981: Random Sampling)
 - a. Dispute Resolution Sampling – Increase sample sizes to accommodate paired-T testing. Split additional material with contractor designated lab and continue until testing discrepancies between labs are identified and resolved as defined in this Section, Article 1.7 (UDOT Materials Manual of Instruction, Part 8: Chapter 4, Appendix C).
3. Inform the Contractor of the time and place for the sample not more than 15 minutes before sampling.
4. Conduct the following tests:
 - a. Asphalt Binder Content: One per subplot using ignition oven. AASHTO T 308
 - b. Aggregate gradation: One test per subplot on the residue of the ignition oven tests. AASHTO T 30
 - c. VMA: 3 tests per lot. AASHTO T 312
 - d. Maximum Specific Gravity: Three per lot in conjunction with VMA determination. AASHTO T 209
 - e. VCA_{DRC} : One test per lot on un-limed cold-feed samples taken at the same time as mix samples for the first week of production or as directed by the Resident Engineer. AASHTO R 46
 - f. VCA_{MIX} : Taken from daily Gmb average of lot acceptance pucks used in conjunction with VCA_{DRC}
5. Use the average of the Maximum Specific Gravity tests for each lot to determine density of cores.
6. Determine thickness of cores according to ASTM D 3549.
7. Add the lot to the previous day's production if the minimum number of samples cannot be obtained for the final day's production and evaluate with the appropriate sample size.
8. Add the lot to the next day's production if the minimum number of samples cannot be obtained and evaluate with the appropriate sample size.

- B. The Engineer conducts the acceptance testing for asphalt binder content (AASHTO T 308), gradation (AASHTO T 30), VMA (AASHTO T 312), density (AASHTO T 166), and thickness (ASTM D 3549). The Engineer may elect to accept material based on visual inspection for small projects with plan quantities of SMA less than 500 tons or for work such as utility work or traffic signals.
1. The Engineer reserves the option of conducting any acceptance tests necessary to determine the material and workmanship meets the project requirements when acceptance is intended to be based on visual inspection.
 2. Acceptance is limited to material being furnished from sources found satisfactory under normal sampling and testing procedures.
 3. Material that is visually accepted will be documented daily using the "Visual Inspection Report."
- C. Obtain samples for density and thickness.
1. The Engineer marks coring locations for in-place density and joint density cores. Obtain two cores per subplot, randomly as instructed and in the presence of the Engineer within two days after the pavement is placed. (UDOT Materials Manual of Instruction Part 8-981: Random Sampling, UDOT Materials Manual of Instruction Part 8-984: Sampling Methods).
 2. Move transversely to a point one foot from the edge of the pavement if the random location for cores falls within one foot of the edge of the overall pavement section (outer part of shoulders).
 3. Fill core holes with SMA and compact.
 4. The Department witnesses the coring operation and takes possession of the cores immediately and begins testing the cores within 24 hours for density acceptance.
- D. Density: The in-place target density for determining acceptance and incentive/disincentive is 94.0 percent of Maximum Specific Gravity density, AASHTO T 209. In-place density is based on cores obtained in paragraph C and tested according to AASHTO T 166.
1. Use Table 4 with $n=10$ to determine PT for density.
 2. Asphalt binder content and VMA from lots are combined in order to obtain an appropriate sample size for evaluation. A lot for density determination is defined as the combined production days.
- E. Thickness: Base acceptance on the average thickness of a lot. A thickness lot equals a density lot.
1. The same core samples taken for density will be used for thickness verification. ASTM D 3549
 2. The Department accepts a lot when:
 - a. The average thickness of all sublots is not more than $\frac{1}{2}$ inch greater nor $\frac{1}{4}$ inch less than the total thickness specified.

- b. No individual subplot shows a deficient thickness of more than $\frac{3}{8}$ inch.
- c. Place additional materials where lots or sublots are deficient in thickness. The minimum depth of compacted surface for correcting deficient thickness is 3 times the nominal maximum aggregate size.
- d. The Department pays for the quantity of additional material to bring the surface to design grade.
- e. The Department does not pay for the quantity of additional material above the design grade due to the minimum paving thickness required.
- f. The Engineer may allow excess thickness to remain in place or may order its removal. Remove and replace the entire depth of the course if it is necessary to remove portions of the course.
- g. The Department pays for 50 percent of the mix in excess of the $+\frac{1}{2}$ inch tolerance when excess thickness is allowed to remain in place.

F. Smoothness Tests

- 1. Determine acceptance and correct according to Section 01452.

G. Cease production when any two out of three consecutive lots meet one of the following:

- 1. Criteria
 - a. A net disincentive
 - b. Air voids at N_{des} averaged for each lot are less than 2.5 or greater than 4.5 percent
 - c. VMA is less than 17.0 percent
 - d. Refer to Table 2 of this section.
- 2. Submit a corrective action plan to the Engineer before production continues indicating the changes in production procedures that will be implemented to correct the deficiencies.

H. The Department pays incentive/disincentive on the assessed quantities of SMA mix according to Table 1. Base the incentive/disincentive on Percent Within Limit (PT) computation using Tables 3, 4, and 5. Use lowest single value combined for gradation (each of the sieves) and asphalt binder content for calculating the gradation/asphalt binder content incentive/disincentive in Table 1.

- 1. Meet PT of 88 or greater for density for eligibility for incentive in gradation/asphalt binder content.
- 2. Meet control requirements of Table 2 for VMA/VCA.
 - a. The Department does not pay incentive for gradation/asphalt binder content if the contractor does not meet the conditions of "continue paving" action from table 2.

3. Incentives/disincentives do not apply to material accepted on the basis of visual inspection.
- I. The Department rejects the lot if the PT for any individual measurement is less than 60 percent. The disincentive for the lot is \$35.00/Ton deduction if the rejected lot is allowed to remain in place.
- J. The Engineer may, in concurrence with the Contractor, choose to combine production from several days to form a single lot to reduce over-testing of small quantity production days such as ramps or bridgework.
- K. Design a mix with the minimum binder content as found in Section 02742S, as a percentage of the total mix.

Table 1

Incentive/Disincentive for Asphalt Binder Content, and Density	
PT Based on Min. Four Samples	Incentive/Disincentive (Dollars/Ton)
>99	1.50
96-99	1.00
92-95	0.60
88-91	0.00
84-87	-0.26
80-83	-0.60
76-79	-0.93
72-75	-1.27
68-71	-1.60
64-67	-1.93
60-63	-2.27
<60	Reject
Incentive/Disincentive for Gradation	
PT Based on Min. Four Samples	Incentive/Disincentive (Dollars/Ton)
>99	1.50
96-99	1.00
92-95	0.60
88-91	0.00

Enter table in the appropriate sample size column and round down to the nearest value.

Table 5

Definitions, Abbreviations, and Formulas for Acceptance	
Term	Explanation
Target Value (TV)	The target values for gradation and asphalt binder content are given in the CONTRACTOR's mix design. The target value for density is 94.0 percent of maximum (Rice) density.
Average (AVE)	The sum of the lot's test results for a measured characteristic divided by the number of test results, the arithmetic mean.
Standard Deviation (s)	The square root of the value formed by summing the squared difference between the individual test results of a measured characteristic and AVE, divided by the number of test results minus one. This statement does not limit the methods of calculations of s; other methods that obtain the same value may be used.
Upper Limit (UL)	The value above the TV of each measured characteristic that defines the upper limit of acceptable production. (Table 3)
Lower Limit (LL)	The value below the TV of each measured characteristic that defines the lower limit of acceptable production (Table 3)
Upper Quality Index (QU)	$QU = (UL - AVE)/s$
Lower Quality Index (QL)	$QL = (AVE - LL)/s$
Percentage of Lot Within UL (PU)	Determined by entering Table 4 with QU.
Percentage of Lot Within LL (PL)	Determined by entering Table 4 with QL.
Total Percentage of Lot (PT) Within UL and LL (PT)	$PT = (PU + PL) - 100$
Incentive/Disincentive	Determined by entering Table 1 with PT or PL.

All values for AVE, s, QU, and QL will be calculated to a minimum two decimal place accuracy that will be carried through all further calculations. Rounding to lower accuracy is not allowed.

1.7 LABORATORY CORRELATION

- A. Perform the following to be eligible for dispute resolution:
 - 1. Perform split-sample, paired-T testing with the Department based on project quality control testing using UDOT LQP qualified lab.
 - a. Perform split-sample, paired-T analysis on all mix acceptance tests related to volumetric properties and the following background testing:
 - 1) Maximum Specific Gravity of Mix, AASHTO T 209
 - 2) Bulk Specific Gravity of Mix, AASHTO T 166

- 3) Bulk Specific Gravity of Coarse Aggregates, AASHTO T 85
 - b. Continue until attaining successful Paired-T test results, meeting $\alpha = 0.05$, for a minimum of two consecutive production days (UDOT Materials Manual of Instruction, Part 8: Chapter 4, Appendix C).
 - c. The engineer may require that all QC testing data be received before disclosure of the QA testing results. This applies to paired-T and all subsequent QA/QC testing data.
- B. Submit a detailed report showing tabular summaries of daily test data, paired-T calculations and any corrections made to account for failed comparisons.
- C. Submit summary before submitting engineering analysis for dispute resolution.

1.8 DISPUTE RESOLUTION

- A. Refer to Section 01456, Materials Dispute Resolution

PART 2 PRODUCTS

2.1 ASPHALT BINDER

- A. Refer to Section 02742S, Project Specific Surfacing Requirements.
- B. Asphalt Material according to Section 02745.
- C. Adhere to UDOT Minimum Sampling and Testing Guide Quality Management Plan 509: Asphalt Binder Quality Management System sampling, testing and handling of Asphalt Binder.

2.2 AGGREGATE

- A. Refer to the UDOT Minimum Sampling and Testing Guide for testing frequencies.
- B. Use crusher processed virgin aggregate material consisting of crushed stone, gravel, or slag.
- C. Use the following requirements, including Table 6, to determine the suitability of the aggregate.
 - 1. Coarse aggregates:
 - a. Retained on No. 4 sieve. AASHTO T 27

2. Fine aggregates:
 - a. Clean, hard grained, and angular.
 - b. Passing the No. 4 sieve. AASHTO T 27

Table 6

Aggregate Properties - SMA			
Test Method	Test No.	Category 1	Category 2
One Fractured Face	AASHTO T 335	100% min.	85% min. (1 inch and $\frac{3}{4}$ inch), and 90% min. ($\frac{1}{2}$ inch and $\frac{3}{8}$ inch)
Two Fractured Face	AASHTO T 335	90% min.	80% min. (1 inch and $\frac{3}{4}$ inch), and 90% min. ($\frac{1}{2}$ inch and $\frac{3}{8}$ inch)
Fine Aggregate Angularity	AASHTO T 304	45 min.	45 min.
Flakiness Index	UDOT MOI (Based on 3/8 inch and above)	25% max.	25% max.
L.A. Wear	AASHTO T 96	28% max.	30% max.
Sand Equivalent	AASHTO T 176 (Pre-wet method)	60 min.	45 min.
Plasticity Index (Does not Apply to Mineral Filler)	AASHTO T 89 and T 90	0 max.	0 max.
Unit Weight	AASHTO T 19	75 lb/cu. ft. min.	75 lb/cu. ft. min.
Soundness (sodium sulfate)	AASHTO T 104	10% max. loss with five cycles	10% max. loss with five cycles
Clay Lumps and Friable Particles	AASHTO T 112	2% max	2% max.
Natural Fines	N/A	0 max.	0 max.
Category 1: National Highway System and Truck Routes – Refer to section 02741. Category 2: All Other Routes			

- D. Meet gradation requirements in Table 7. (AASHTO T 11, AASHTO T 27)

Table 7

Stone Matrix Asphalt Percent Passing by Mass (See SMA Mix design for sample calculations)			
Sieve Size		1/2"	3/8"
Control Sieves	1.5"		
	1"		
	3/4"	100	
	1/2"	90 - 100	100
	3/8"	45 - 78	90 - 100
	#4	20 - 28	26 - 50
	#8	16 - 24	20 - 28
	#16	13 - 21	13 - 21
	#30	12 - 18	12 - 18
	#50	12 - 15	12 - 15
	#200	8 - 10	8 - 10

2.3 ADDITIVES / STABILIZERS

- A. Hydrated Lime: Meet the requirements of Section 02746.
- B. Fibers: Made from virgin basalt, diabase, slag, or cellulose treated with a cationic sizing agent to enhance disbursement of the fiber as well as increase adhesion of the fiber surface with the Asphalt binder. This additive will also be used to control drain-down. All fibers will conform to AASHTO M 325 - 08.
1. Mineral Fiber
 - a. Dosage rate between 0.3 percent to 0.6 percent, by weight of the total mix.
 - b. Average fiber length 0.25 inches, maximum
 - c. Average Fiber thickness 0.0002 inches, maximum
 - d. Shot content (ASTM C 612)
 Passing No. 60 sieve 90 - 100 percent
 Passing No. 230 sieve 65 - 100 percent

2. Cellulose Fiber
 - a. Dosage rate for cellulose is 0.2 percent to 0.4 percent by weight of total mix.
 - b. Using Alpine sieve analysis, fiber length of 0.25 inches max. passing the #100 sieve 70 percent (+/- 10 percent).
 - c. Using a mesh screen analysis, fibers will pass
 - #20 sieve 85 percent (+/- 10 percent)
 - #40 sieve 65 percent (+/-10 percent)
 - #140 sieve 30 percent (+/-10 percent)
 - d. Ash content will be 18 percent (+/- 5 percent)
 - e. PH will be 7.5 (+/- 1.0)
 - f. Oil absorption will be 5.0 (+/- 1.0 percent)
 - g. Moisture content will be <5 percent by weight of cellulose

- C. Mineral Filler:
 Consists of finely divided mineral matter such as rock dust, slag dust, hydrated lime, hydraulic cement, fly ash, or other suitable mineral matter. Free flowing and free of lumps.
1. Meet the following

No. 30	100 percent, Passing
No. 50	95 - 100 percent, Passing
No. 200	55 - 100 percent, Passing
No. 450	40 percent, Maximum
 2. No organic impurities
 3. Plasticity Index < 4 (not appropriate for hydrated lime and hydraulic cement)

2.4 JOB-MIX DESIGN

- A. Perform Stone Matrix Asphalt Mix Design according to AASHTO R 46, with the following:
1. Use a UDOT Transportation Technician Qualification Program qualified laboratory for HMA.
 2. Use a Superpave Gyratory Compactor approved in accordance with UDOT Materials Manual of Instruction Part 8-961: Guidelines for Superpave Gyratory Compactor Protocol.
 3. Meet all mix design requirements in Table 8 and Table 9 for the selected target gradation.
 4. Refer to NAPA Quality Improvement Series Publication 122: Designing and Constructing SMA Mixtures – State-of-the-practice for additional information.

- B. Submit the Volumetric Mix Design data for verification at least 10 working days before beginning paving. Do not begin paving until verification is complete.
 - 1. Include all information regarding selection of design aggregate structure showing the target values of percent passing on all sieves listed in Table 7, and the design asphalt binder content.
 - 2. Provide information that aggregate proposed for use meet the requirements of Table 6.
 - 3. Supply QC data for target job mix gradation selection. Use those target values for price adjustments.
 - 4. Run 4 sets of 2 Gyratory specimens at the design asphalt binder content to verify the optimum asphalt and all other design requirements after the design is complete.

- C. Moisture Susceptibility
 - 1. Incorporate hydrated lime into all volumetric designs. Use 1 percent, minimum, for Method A and 1½ percent, minimum for Method B (Section 02746).
 - a. Prepare laboratory samples in a manner similar to field production. Construct lab samples similarly by adding hydrated lime to aggregate and drying sample before the incorporation of mineral filler and fiber if hydrated lime is to be introduced to the mix before adding mineral filler and fibers at the plant.

- D. Designate asphalt binder supplier.

- E. Use gyratory mixing and compaction temperatures supplied by the Engineer.

- F. The Department Region Materials Lab verifies the Stone Matrix Asphalt Mix Design.

- G. Comply with the following requirements for Stone Matrix Asphalt Mix Design.

Table 8

Stone Matrix Asphalt Mix Design - SMA Compaction Parameters	
Design Gyration	% of G_{mm} *
100	96.5

* G_{mm} : Maximum specific gravity of Mix.

Table 9

Stone Matrix Asphalt Mix Design Requirements	
SMA design mixing and compaction temperatures	Provided by the Engineer
Voids in Mineral Aggregate (VMA) at N_{design} AASHTO R 46, using G_{sb} . Equation based on percent of total mix.	17.0 percent minimum
Voids In Course Aggregate (Stone Matrix Asphalt Mix Design)	$VCA_{MIX} < VCA_{DRC}$
Hamburg Wheel Tracker	< 10.00 mm at 20,000 Cycles.

- H. Prepare and submit 2 sets (5 samples each) of ignition oven calibration samples.
 - 1. Department uses these samples to determine the correction factors for the Region and Field lab ignition oven.
 - 2. Submit samples a minimum of three working days before paving.

- I. Mortar is the dust (minus #200 material) from the mix combined with the asphalt binder and fiber. Mortar must meet the following and this Section, Article 2.5:
 - 1. Unaged DSR $G^*/\sin \delta \geq 5$ kPa
 - 2. RTFO aged DSR $G^*/\sin \delta \geq 11$ kPa
 - 3. PAV aged BBR Stiffness ≤ 1500 Mpa

- J. Meet Draindown of 0.30 percent or less according to AASHTO T 305 - Determination of Draindown Characteristics in Uncompacted Bituminous Mixtures.

- K. Evaluate the mortar properties of the best trial gradation using the procedure outlined in this Section, Article 2.5.

2.5 TESTING OF STONE MATRIX ASPHALT MORTARS

- A. Scope
 - 1. Blending and specimen preparation of stone matrix asphalt (SMA) mortars to predetermine the physical characteristics of mortars used in SMA.

- B. Apparatus for Preparation
 - 1. Balance: 2-kg capacity, sensitive to 0.1 g. Conform to the requirement of ASTM D 4753, class GP2 or AASHTO M 231, class G2.

2. Oven: capable of maintaining the needed temperature within ± 6 degrees C.
3. Hot plate: at least 700-W capacity with adjustable temperature control.
4. Sample containers: capable of holding at least 100 g of filler and 200 g of liquid asphalt binder. A seamless ointment tin is recommended.
5. Mixing tools: wooden tongue depressors, spatulas, and spoons.
6. Insulated gloves: for handling hot samples and equipment.

C. Sample Preparation Procedure

1. Dry respective aggregate fractions containing material passing the No. 200 sieve to constant weight (mass) at 110 ± 6 degrees C. Dry sieve these aggregates and collect the dust from each aggregate. Blend the fillers to meet the percent by volume on the job-mix-formula. An example of how to blend by volume can be found in AASHTO R 46.
2. Place a quart can of pre-aged liquid asphalt binder into an oven set at 165 ± 6 degrees C. Refer to this Section, Article 2.5 paragraph D.
3. Weigh 100 ± 0.1 g of minus No. 200 blended filler into the seamless ointment tin and place into a 175 ± 6 degrees C oven. The material should remain in the oven for at least 30 minutes.
4. Weigh into the filler the proper amount of liquid asphalt binder to the nearest 0.1 g.
5. Place the tin on the hot plate and hand mix with a spatula. Slowly add the proper amount of fiber (weighed to the nearest 0.1 g) and continue mixing until the mortar is homogeneous.
6. Use loose fiber of the same type to create the mortar or use a high-shear mixer when asphalt-fiber pellets are used. Asphalt-pellet fibers will not blend into the filler under low-shear mixing conditions.

D. Testing of Mortars

1. Age the liquid asphalt binder following AASHTO T 240, AASHTO R 28, or both when performing Performance Grade Asphalt Binder testing of the mortar and prior to blending with fillers and fibers.
2. Follow ASTM D 4402 except that readings should be taken as soon as the temperature stabilizes because the fillers will sink to the bottom over time.
3. Follow AASHTO T 315 except use a higher preheat temperature of 60 degrees C. This is to insure that the specimen will adhere strongly to both plates.
4. Follow AASHTO T 313 except, using aluminum molds:
 - a. Place the mold over the corner of the warm hot plate so that the mold is on the hot plate and the rubber O-rings are not.

- b. Gently tamp the mortar into the mold using a wooden tongue depressor. A light coating of release agent (glycerin and talc) will assist in this procedure.
- c. Repeat step b until the mold is full of mortar.
- d. Continue according to AASHTO T 313.

E. Reporting

- 1. Report as required in this Section, Article 2.4 A.

2.6 CONTRACTOR INITIATED CHANGES IN STONE MATRIX ASPHALT MIX DESIGN

- A. Submit all requests in writing to the Engineer at least 12 hours before incorporating changes into production.
- B. Submit a field volumetric mix design for all target changes.
 - 1. Include documentation supporting correlation between suggested target changes and mix design volumetric requirements. Department acceptance or Contractor QC testing data is acceptable.
 - 2. Field volumetric mix design verification consists of three sets of two gyratory specimens run at the new target gradation, asphalt binder content, or both. The Department's previous acceptance tests are acceptable for field verification.
 - 3. The Engineer, in consultation with the Region Materials Engineer, provides written concurrence of the verified field volumetric mix design if the field volumetric mix design meets the volumetric requirements.
 - 4. Submit a new laboratory volumetric mix design from a laboratory qualified by UDOT Central Materials if the field volumetric mix verification does not meet the volumetric requirements. Allow at least 7 working days for verification.
 - 5. The Department may allow up to two minor target changes per project without penalty to the contractor. The Department charges \$1,000 for each additional minor target change.
 - 6. The Department performs up to two volumetric mix design verifications at no cost to the Contractor. The Department charges \$3,000 for each additional laboratory or field verification required including all laboratory or field volumetric mix design verifications required due to contractor initiated target changes.
- C. Submit a new laboratory volumetric mix design if changes occur in the aggregate source, asphalt binder source, or grade.
- D. Do not make changes to production mix until request is reviewed and verified by the RE in consultation with the RME.

PART 3 EXECUTION

3.1 ADDING HYDRATED LIME

- A. Method A, Lime Slurry or Method B, Lime Slurry Marination: Refer to Section 02746.

3.2 SMA

- A. Dry aggregate to an average moisture content of not more than 0.2 percent by weight. Use AASHTO T 255 for verification. Adjust burners to avoid damage or soot contamination of the aggregate.
- B. Coat with asphalt binder 100 percent of the particles passing and 98 percent of the particles retained on the No. 4 sieve.
 - 1. Use AASHTO T 195 for verification.
 - 2. Discontinue operation and make necessary corrections if material is not properly coated.
- C. Maintain temperature of the SMA between identified compaction limits as defined on Volumetric Mix Design Verification Letter.
 - 1. Department rejects materials heated over the identified limits.
 - 2. Remove all material rejected by the Department for overheating.

3.3 SMA PLANT

- A. Provide:
 - 1. Positive means to determine the moisture content of aggregate on a daily basis.
 - 2. Positive means to sample all material components.
 - 3. Sensors to measure the temperature of the SMA at discharge.
 - 4. The ability to maintain discharge temperature of the mix according to the mix design.
- B. Asphalt Binder Storage Tanks:
 - 1. Provide calibrated tanks so the quantity of material remaining in the tank can be determined at any time.
 - 2. Provide a positive means of sampling the asphalt binder from the tanks.
- C. Fiber Supply System:
 - 1. Provide separate proportioning device interlocked with the aggregate feed or weigh system to maintain correct proportions and uniform distribution for all rates of production and batch sizes.

2. Provide flow indicators or sensing devices interlocked with plant controls.
 3. Uniformly distribute fibers in aggregate before injecting the asphalt into the mixer. (8 to 12 seconds)
 4. Do not allow the fiber to become entrained in the exhaust system of the plant.
- D. Mineral Filler Supply System:
1. Provide separate proportioning device interlocked with the aggregate feed or weigh system to maintain correct proportions and uniform distribution for all rates of production and batch sizes.
 2. Provide flow indicators or sensing devices interlocked with plant controls.
 3. Uniformly distribute filler in aggregate before injecting asphalt into the mixer.
 4. Do not allow the filler to become entrained in the exhaust system of the plant.

3.4 SURFACE PREPARATION

- A. Locate, reference, and protect all utility covers, monuments, curb and gutter, and other components affected by the paving operations.
- B. Remove all moisture, dirt, sand, leaves, and other objectionable material from the prepared surface before placing the mix.
- C. Allow sufficient cure time for prime coat/tack coat before placing SMA. Refer to Section 02748.

3.5 SURFACE PLACEMENT

- A. Provide a 3:1 (horizontal to vertical) sloped edge adjacent to the next lane to be paved when full-width or echelon paving is impractical and more than one pass is required.
- B. Construct the longitudinal joint to within 6 inches of the lane lines or at the center of the lane at the direction of the Engineer, but never in a wheel path. All long joints will be cored and tested for compaction according to the specification if the lift is 2 or more inches thick. Verify all edges of the adjacent areas to through lanes have straight and uniform longitudinal lines and neat vertical edges.
- C. Adjust the production of the mixing plant and material delivery until a steady paver speed is maintained.

- D. Do not allow construction vehicles, general traffic, or rollers to pass over the uncompacted end or edge of freshly placed mix until the mat temperature drops to a point where damage or differential compaction will not occur.
- E. Taper the end of a course subjected to traffic at approximately 50:1 (horizontal to vertical).
 - 1. Make a transverse joint by saw or wheel cutting and removing the portion of the pass that contains the tapered end.
 - 2. Tack the contact surfaces before fresh mix is placed against the compacted mix.
- F. Use a Material Transfer Vehicle (MTV) to apply all courses of SMA. Use an MTV that internally performs additional mixing of the SMA mix and then deposits material into the paver at a uniform temperature and consistency.

3.6 COMPACTION

- A. Use a small compactor or vibratory roller in addition to normal rolling at structures.
- B. Operate in a transverse direction next to the back wall and approach slab.
- C. Use aggressive rolling techniques to minimize risk of under-compacted SMA courses. Use a 9 ton (minimum) roller.
- D. Roll surface immediately after placement staying as close as possible to the lay-down machine and assuring proper mix design placement temperatures. Minimize the use of vibratory rollers.
- E. Do not use Pneumatic tire rollers.
- F. Discontinue vibration if aggregate breakdown occurs or if bleeding occurs. The material has been excessively vibrated if the proper surface texture is lost.

3.7 LIMITATIONS

- A. Do not place SMA on frozen base or subbase.
- B. Use a UDOT approved release agent for all equipment and hand tools used to mix, haul, and place the SMA. Contact the Engineer for approved product.
- C. Do not place SMA during adverse climatic conditions such as precipitation or when roadway surface is icy or wet.

- D. Place SMA from April 15, to October 15, and when the air temperature in the shade and the roadway surface temperature are above 50 degrees F.
 - 1. The Department determines if it is feasible to place SMA outside the above limits. Obtain written approval from the Engineer before paving from October 15, to April 15.

END OF SECTION

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 02746M

HYDRATED LIME

Add the following to Article 1.6:

- B. Comply with UDOT Quality Management Plan 514 Hot Mix Asphalt

Delete Article 3.1, paragraph B and replace with the following:

- B. Method A: Dynamic Feed Lime Slurry
 1. Lime Slurry – One part lime and at least three parts water by weight. The amount of added water to meet the 3:1 lime slurry may be adjusted to account for the moisture in the stockpile. Use lime slurry with a minimum of one part water by weight of lime.
 2. Add at least 1 percent lime by weight of the virgin aggregate.
 3. Deliver lime slurry to the twin shaft pugmill for mixing with aggregate. The virgin aggregate/lime mixture will contain at least 3 percent water by weight of the virgin aggregate after the pugmill
 4. Adjust quantity (percent) of lime as necessary, based on results of Hamburg Wheel Tracker test.
 5. Verify that Lime Slurry equipment is operating at all times. The Engineer may require Method B, marination of the aggregate/hydrated lime mixture in the stockpile if the HMA is supplied without hydrated lime slurry treatment.

Delete Article 3.1, paragraph C4 and replace with the following:

4. Provide sufficient free moisture to thoroughly wet the aggregate and activate the lime before introducing hydrated lime.
 - a. The aggregate/lime mixture will contain at least 3 percent water by weight of the virgin aggregate.

Delete Article 3.2, paragraph A and replace with the following:

- A. Control, monitor, and document the lime addition process according to the requirements of the UDOT Quality Management Plan 514 Hot-Mix Asphalt.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 02748M

PRIME COAT/TACK COAT

Delete Article 1.4, paragraph B3 and replace with the following:

3. A diluted product may be used to better control distribution when the residual application rate is small (0.03 gal/yd²).
 - a. The product will be referred to as a 1:1 or 2:1 dilute meaning 2 parts emulsion to 1 part water for the latter case when this is done.

Delete Table 2 and replace with the following:

Table 2

Application Rate (gal/yd²)				
Existing Pavement Condition	Residual	Undiluted	1: 1 Dilute	2:1 Dilute
New HMA	0.03	0.05	0.10	0.08
Oxidized HMA	0.05	0.09	0.18	0.13
Milled HMA	0.07	0.12	0.24	0.18
Milled PCCP	0.07	0.12	0.24	0.18
PCCP	0.05	0.09	0.18	0.13

Residual – Asphalt binder content needed on the pavement.

Undiluted and 1:1 and 2:1 Dilute. Adjust the application rate if emulsion is not 60 percent residual asphalt.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 02761

LONGITUDINAL RUMBLE STRIP

Delete Section 02761 and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Materials and procedures for constructing longitudinal rumble strip on the final roadway surface.

1.2 RELATED SECTIONS

- A. Section 01558: Temporary Pavement Markings
- B. Section 02742S: Project Specific Surfacing Requirements

1.3 REFERENCES Not Used

1.4 DEFINITIONS

- A. HMA – Hot Mix Asphalt Pavement
- B. PCCP – Portland Cement Concrete Pavement
- C. SMA -- Stone Matrix Asphalt Pavement

1.5 SUBMITTALS Not Used

1.6 ACCEPTANCE

- A. The grinds will be visually inspected at the start of installation and inspected at a minimum of once a day for each day of production, to verify a uniform application rate of asphalt flush coat or seal coat and compliance with the PV Series Standard Drawings for dimensions and spacing.

PART 2 PRODUCTS

2.1 EQUIPMENT

- A. Install longitudinal rumble strip with equipment using a rotary type cutting head capable of obtaining the required groove width, depth and length in a single pass while moving in the same direction as the traffic flow.
 - 1. Use equipment with cutting heads having an independent suspension from the power unit to allow the head to self align with the slope of the shoulder.
 - 2. Use cutting heads that provide a smooth surface, approximately $\frac{1}{16}$ inch between peaks or valleys.

- B. Seal longitudinal rumble strip with equipment capable of obtaining the required uniform application rate in a single pass while moving in the same direction as the flow of traffic.

PART 3 EXECUTION

3.1 INSTALLATION

- A. Install longitudinal rumble strip to the dimensions and spacing as shown in PV Series Standard Drawings.
 - 1. Establish lane widths from plan set or existing roadway if not specified with plans, before installation of longitudinal rumble strip.
 - 2. Install longitudinal rumble strip after the final wearing course except when project includes a Chip Seal Coat as the final wearing course.
 - a. Apply Chip Seal Coat after rumble strip has been installed.

- B. Alignment Control
 - 1. Establish a control line using a dribble/drip line, temporary pavement marking material, or permanent application of pavement marking material according to Section 01558 in its permanent configuration and location before the installation of longitudinal rumble strip.
 - a. Reestablish the pavement marking material at no additional cost to the Department if permanent application of pavement marking material is compromised, damaged or removed in any way during installation of longitudinal rumble strip or flush coat or seal coat.
 - b. Establish control points at a minimum of 100 ft intervals on tangents and at 50 ft intervals on curves.

2. Maintain the longitudinal rumble strip within 2 inches of the nearest edge of control line.
 - a. Maintain the grind dimensions within 10 percent of the width, depth and length dimensions defined in the PV series Standard Drawings.

- C. Construct a 500 ft long test section each production day to demonstrate that the equipment, personnel, and methods of operation are capable of producing acceptable results.
 1. Do not proceed with work until it is demonstrated that the required dimensions, alignment, and smoothness can be achieved without tearing or otherwise damaging the pavement.
 2. Do not proceed with work until it is demonstrated that the uniform application of asphalt flush coat or seal coat is being achieved at the specified application rate over the required area.
 3. Repair or replace pavement in areas where longitudinal rumble strips are unacceptable as determined by the Engineer.
 - a. Complete all repairs at no additional cost to the Department.
 4. Replace or deduct price paid for longitudinal rumble strips not installed according to Standards as follows;
 - a. Deduct 25 percent for longitudinal rumble strips installed within 2 inches of allowable tolerance.
 - b. Deduct 50 percent for longitudinal rumble strips installed greater than 2 inches but less than 4 inches out of allowable tolerance.
 - c. Remove and replace longitudinal rumble strips greater than 4 inches out of allowable tolerance by milling 2 inches deep and three times the rumble strip width.
 - d. Fill milled section with like material and reinstall longitudinal rumble strips according to Standards.

- D. Clean the surface of all dirt, sand, dust, and other objectionable material to the satisfaction of the Engineer before applying asphalt flush coat.

- E. Apply asphalt flush coat or seal coat on HMA and SMA surfaces after longitudinal rumble strips have been installed in the roadway.
 1. Apply asphalt flush coat on HMA SMA surfaces at a uniform application rate according to Section 02742S.
 2. Refer to Section 02742S for asphalt flush coat or seal coat material.
 3. Adjust speed and application method to achieve uniform application rate and to prevent shadow areas of thinner application depths according to this Section, paragraph 2.1.B.
 4. Reapply asphalt flush coat or seal coat to any rumble strips that do not have a uniform application at no additional cost to the Department.

- F. Do not apply flush coat on PCCP surfaces.
- G. Remove resulting debris before opening the adjacent lane to traffic.
 - 1. Dispose of material according to Federal, State, and Local regulations and in a manner acceptable to the Engineer.

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 02765M

PAVEMENT MARKING PAINT

Delete Article 1.3, paragraphs M through S and replace with the following:

- M. ASTM E 1710: Test Method for Measurement of Retroreflective Pavement Marking Materials Using a Portable Retroreflectometer
- N. Environmental Protection Agency Testing Methods
- O. Federal Specification
- P. Federal Standards
- Q. Manual on Uniform Traffic Control Devices (MUTCD)
- R. UDOT Materials Manual of Instruction
- S. UDOT Minimum Sampling and Testing Requirements
- T. UDOT Quality Management Plans

Delete Article 1.6 paragraphs D and E and replace with the following:

- D. The Engineer will:
 - 1. Visually inspect longitudinal lines and transverse markings to verify compliance with the required dimensions.
 - 2. Inspect at the end of each production day or more frequently as required.
 - 3. Verify quantities applied by one of the following methods for paint and one of the methods for beads.
 - a. Methods for paint:
 - 1) Measure paint tanks before and after application
 - 2) Witness the meter readings before and after application. A print out of meter readings instead of witnessing may be accepted at the Engineer's discretion.

- b. Method for beads:
 - 1) Measure bead tanks before and after application.
 - 2) Accept beads according to retroreflectivity Performance criteria. Refer to this Section, Article 3.2, paragraph E2 below.
 - 4. Sample in the field according to the UDOT Quality Management Plan 513, Pavement Marking Paint, and the UDOT Minimum Sampling and Testing Requirements.
- E. Repaint any line or legend failing to meet bead application rates or retroreflectivity requirements and dimensional requirements.
- 1. Do not remove earlier application.

Delete Article 3.2, paragraphs E and replace with the following:

- E. Glass Sphere (Beads) –
- 1. Apply at least 8 lb/gal of paint, the full length and width of line and pavement markings.
 - a. Calibrate bead guns and measure bead distribution according to UDOT Materials Manual of Instruction 932, Procedure for Sampling and Accepting Pavement Marking Paint and Beads.
 - b. Do not apply glass beads to contrast lines (black paint).
 - 2. Performance option for bead measurement and acceptance.
 - a. Measure retroreflectivity within 7 days of pavement marking application.
 - b. Use a portable retroreflectometer that meets requirements of ASTM E 1710
 - c. Identify three 400-foot sections per 10 miles of pavement marking. For pavement markings less than 2 miles sample only one 400-foot section.
 - d. Take a minimum of 16 approximately evenly spaced readings for edge lines, lane lines and centerlines throughout each section in each direction of travel.
 - e. The Engineer may select the sections to be tested.
 - f. Average all readings of each line to determine the retroreflectivity measurement for each line.
 - g. UDOT may verify with quality assurance testing within 21 days of pavement marking application

- h. Determine the acceptability and pay factors for retroreflectivity using Table 5

Table 5

Pay Adjustments for Retroreflectivity Requirements		
Material Type	Retroreflectivity (R)	Pay Factor
Waterborne Traffic Paint (White)	>249	1.0
	225 - 249	.75
	200 - 224	.50
	< 200	0*
Waterborne Traffic Paint (Yellow)	>174	1.0
	150-174	.75
	125-149	.50
	< 125	0*

* Repaint pavement markings at no cost to the Department. Do not remove earlier application.

PAVEMENT MARKING PAINT

Delete Article 1.3, paragraphs M through R and replace with the following:

- M. Environmental Protection Agency Testing Methods
- N. Federal Specification
- O. Federal Standards
- P. Manual on Uniform Traffic Control Devices (MUTCD)
- Q. UDOT Materials Manual of Instruction
- R. UDOT Minimum Sampling and Testing Requirements
- S. UDOT Quality Management Plans

Delete Article 2.1, paragraph A, Table 4 and replace with the following:

Table 4

Paint Requirements				
Property	White	Yellow	Black	Test
Pigment – Percent by weight, minimum	62.0	62.0	62.0	ASTM D 3723
Total Solids – Percent by weight, minimum	77.0	77.0	77.0	ASTM D 1644
Nonvolatile vehicle – Percent by weight vehicle, minimum*	43.0	43.0	43.0	ASTM D 3723 ASTM D 1644
Viscosity, KU @ 77 degrees F	80 – 95	80 – 95	80 – 95	ASTM D 562
Density, lb/gal, minimum	14.0	14.0	14.0	ASTM D 1475
Volatile Organic Content (VOC) – g/L, maximum	100	100	100	ASTM D 3960
Titanium Dioxide Content, lb/gal	1.0 min	0.2 max	N/A	ASTM D 5381
Color Definition	37875	33538	N/A	Federal Standard 595B
Directional Reflectance Minimum	90.0	50.0	N/A	ASTM E 1347
Dry Opacity – Minimum (5 mils wet)	0.95	0.95	N/A	ASTM D 2805

* Binder – 100 percent acrylic cross-linking polymer, by weight, as determined by infrared analysis and other chemical analysis available to the Department. Refer to ASTM D 2205.

Delete Article 2.2 and replace with the following:

2.2 GLASS SPHERES (BEADS) USED IN PAVEMENT MARKING PAINT

- A. Heavy metal concentration: Manufacturer must provide a certificate of compliance stating that all beads contain no more than the amounts listed for the following materials as determined by testing performed according to EPA test methods 3052 and 6010C. Other suitable x-ray fluorescence spectrometry analysis methods may be used to screen samples of glass spheres for arsenic, antimony and lead content.

Table 5

Heavy Metal Materials	
Material	Level (ppm, total)
Arsenic	200
Antimony	200
Lead	200

- B. Longitudinal Lines – Refer to AASHTO M 247, Specific Properties, with the following exceptions:

1. Gradation:

Table 6

Gradation	
Sieve Size	Accumulated Percent Passing
No. 18	65 – 80
No. 30	30 – 50
No. 50	0 – 5

2. Coating – Dual coating for optimum adhesion and embedment.
3. Roundness – 80 percent true spheres below the number 30 sieve. Refer to ASTM D 1155
4. Color/Clarity – Colorless/clear and free of carbon residue.
5. Refractive Index – Minimum 1.51 by oil immersion method.
6. Air Inclusions – Less than 5 percent by visual inspection.
7. Hardness – Beads above the number 30 sieve exhibit an average hardness of C70.5 when measured using the Rockwell C scale method and using a minimum sample of 100 beads.
8. Crushing Strength – Beads above the number 30 sieve exhibit an average crushing strength of 60,000 psi when measured by the L/D^2 method and with a minimum sample of 100 beads.
9. Chemical Resistance – Beads resistant to hydrochloric acid, water, calcium chloride, and sodium sulfide. TT-B Federal Specification 1325C sections 4.3.6 to 4.3.9.

C. Transverse Markings – Refer to AASHTO M 247, Specific Properties, with the following exceptions:

1. Gradation:

Table 7

Gradation	
Sieve Size	Accumulated Percent Passing
No. 20	90 – 95
No. 30	45 – 70
No. 50	5 – 25
No. 80	0 – 5

2. Coating – Dual coating for optimum adhesion and embedment.
3. Roundness – The glass beads will have at least 75 percent true spheres.
4. Refractive index – Minimum 1.51 by oil immersion method.
5. Air Inclusions – Less than 10 percent by visual inspection.
6. Have at least 80 percent true spheres.

D. Beads used in Temporary Pavement Markings. Meet the above or AASHTO M 247 Type II uniform gradation.

Delete Article 3.2, paragraph B2c and replace with the following:

- c. 8 inch Solid Line – From 95 to 120 ft/gal. Use the following calculation to determine wet mil thickness if approximation is outside the range for the desired line type.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 02768M

Pavement Marking Materials
(Warranty Specification)

Delete Article 1.5, paragraph B and replace with the following:

- B. Installation Warranty
 - 1. Manufacturer provides a warranty bond or letter of credit to the Department's Engineer for Maintenance to cover the total installed price of the material on this project and any other projects where the manufacturer's material is installed.
 - 2. Submit material type, manufacturer, installation date, quantities, and project number to the Engineer for each project.
 - 3. Warranty bond or letter of credit covers the specified service life of the materials and begins after all pavement markings are installed and accepted.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 02771

ADA PEDESTRIAN ACCESS RAMPS

Delete Section 02771 and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Americans with Disabilities Act (ADA) pedestrian access ramps.

1.2 RELATED SECTIONS

- A. Section 02056: Embankment, Borrow, and Backfill
- B. Section 02316: Roadway Excavation
- C. Section 02721: Untreated Base Course (UTBC)
- D. Section 02776: Concrete Flatwork
- E. Section 03055: Portland Cement Concrete
- F. Section 03390: Concrete Curing

1.3 REFERENCES

- A. AASHTO M 306: Drainage, Sewer, Utility, and Related Castings
- B. ASTM A 48: Grey Iron Castings

1.4 DEFINITIONS

- A. ADA Pedestrian Access Ramp – Includes pedestrian access elements as contained on GW Series Standard Drawings.
- B. Certified Installer – The contractor or subcontractor who has successfully completed UDOT's ADA Pedestrian Ramp Training Course. Refer to <http://www.udot.utah.gov/go/standardsreferences>.

1.5 SUBMITTALS

- A. Certificate of completion of Department ADA Pedestrian Access Ramp Evaluation Training Course.
- B. Manufacturer's product data, specifications, and recommended application instructions for detectable warning surface.
- C. Provide copy of current certificate for the Certified Installer.

1.6 ACCEPTANCE

- A. ADA pedestrian access ramps may be accepted at a reduced price when the concrete strength is below that specified.
 - 1. Price adjustment pay factor following Section 03055.

PART 2 PRODUCTS

2.1 CONCRETE

- A. Class AA(AE). Refer to Section 03055.

2.2 UNTREATED BASE COURSE

- A. Refer to Section 02721.

2.3 DETECTABLE WARNING SURFACE

- A. Use In-line truncated dome pattern that meets the requirements of GW Series Standard Drawings.
- B. Provide a color that contrasts visually with the adjoining surfaces, either light-on-dark or dark-on-light.
- C. Minimize number of panels used.
- D. Acceptable products for installation:
 - 1. Polymer Composite Panel – Epoxy polymer composition, homogenous integral color, UV stable, skid resistant, non-glare finished panel. Use modular panel size 2 ft by 4 ft or 2 ft by 2 ft. Use for new construction and retrofit construction.

2. Precast Concrete Panel - High strength concrete with structural monofilament fibers, homogeneous integral color, UV stable, skid resistant panel. Use modular panel size 2 ft by 2 ft. Use for new construction only.
3. Gray Iron Casting
 - a. Manufactured from iron conforming to ASTM A 48 Class 35B, as specified in AASHTO M 306, uniform quality, free from sand holes, gas holes, cracks, and other surface defects.
 - b. Provide reasonably smooth, cleaned by shot blasting, free of burned-on sand skid resistant, skid resistant, weathered iron finished panel with embedment anchors.
 - c. Use modular panel size 2 ft x 2 ft square or curved panels as specified.
 - d. Use for new construction only.

PART 3 EXECUTION

3.1 GENERAL

- A. Have a certified ADA Pedestrian Access installer on the ADA Pedestrian Access Ramps job site at all times when they are being installed including forming.
- B. Construct as shown in GW Series Standard Drawings and project plans.

3.2 PREPARATION

- A. Construct subgrade to plan elevations. Refer to Section 02056 and Section 02316.
- B. Place and compact untreated base course.
- C. Forms
 1. Use wood, metal, reinforced fiberglass, or plastic forms free of warps or bends and of sufficient strength to prevent deflection during the placement of concrete.
 - a. Transition smoothly from curves to straight section. Keep forms in curves free of flat sections and sharp bends.
 - b. Anchor securely in place.
 - c. Clean the inside surface of all dirt, concrete, and foreign material before concrete placement.

3.3 CONCRETE CONSTRUCTION

- A. Place and finish concrete and place contraction joints according to Section 02776.
- B. Cure concrete according to Section 03390.

3.4 DETECTABLE WARNING SURFACE

- A. Polymer Composite Panel Installation
 - 1. Install cast-in-place detectable warning panel directly into the finished plastic concrete surface according to manufacturer recommendations. Provide a smooth transition between the panel and the surrounding concrete surface.
 - 2. Install surface applied detectable warning panel directly on existing concrete surface according to manufacturer recommendations and installation procedures. Use mechanical fasteners to secure the panel to the existing surface. Caulk a smooth transition bead along beveled panel edge and surrounding concrete surface.
- B. Polymer Concrete Panel, Precast Concrete Panel, and Cast Iron Plate Installation
 - 1. Place as shown in plans. Install according to manufacturer's recommendations for cast-in-place method. Provide a smooth transition between the panel and the surrounding concrete surface.

END OF SECTION

**Supplemental Specification
2012 Standard Specification Book**

SECTION 02776

CONCRETE FLATWORK

Delete Section 02776 and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Concrete flatwork items such as sidewalk, plowable end section, median filler, curb, gutter, concrete lined ditch, and driveway.

1.2 RELATED SECTIONS

- A. Section 02056: Embankment, Borrow, and Backfill
- B. Section 02316: Roadway Excavation
- C. Section 02721: Untreated Base Course
- D. Section 03055: Portland Cement Concrete
- E. Section 03152: Concrete Joint Control
- F. Section 03211: Reinforcing Steel and Welded Wire
- G. Section 03390: Concrete Curing

1.3 REFERENCES

- A. ASTM C 979: Pigments for Integrally Colored Concrete

1.4 DEFINITIONS Not Used

1.5 SUBMITTALS

- A. 1 ft² sample of colored concrete representative of the color provided by the Engineer for approval.
- B. Manufacturer's product data, specifications, and mixing instructions for concrete colorant.

1.6 ACCEPTANCE

- A. Concrete Flatwork may be accepted at a reduced price when the concrete strength is below that specified.
 - 1. Price adjustment pay factor following Section 03055.

PART 2 PRODUCTS

2.1 CONCRETE

- A. Class AA(AE). Refer to Section 03055.
- B. Colorant – High purity, chemically inert, unfading, and alkali-fast synthetic pigment coloring material according to ASTM C 979.

2.2 PREMOLDED JOINT FILLER

- A. Refer to Section 03152.

2.3 UNTREATED BASE COURSE

- A. Refer to Section 02721.

2.4 REINFORCING STEEL

- A. Coated reinforcing steel. Refer to Section 03211.

PART 3 EXECUTION

3.1 GENERAL

- A. Construct as shown in GW Series Standard Drawings and the plans.

3.2 PREPARATION

- A. Construct subgrade to plan elevations. Refer to Section 02056 and Section 02316.
- B. Place and compact untreated base course.

- C. Forms
 - 1. Use wood, metal, reinforced fiberglass, or plastic forms free of warps or bends and of sufficient strength to prevent deflection during the placement of concrete.
 - a. Transition smoothly from curves to straight sections. Keep forms in curves free of flat sections and sharp bends.
 - b. Anchor securely in place.
 - c. Clean the inside surface of all dirt, concrete, and foreign material before concrete placement.
 - 2. May use slip form machines.
- D. Concrete flatwork coloring when required.
 - 1. Match concrete color to the approved samples.
 - 2. Thoroughly mix color pigment in the concrete before placing.

3.3 PLACE AND FINISH CONCRETE

- A. Dampen the subgrade just before concrete placement.
- B. Hand methods of strike-off and consolidation are permitted.
- C. Finish the surface smooth with a concrete finishing float.
 - 1. Do not add water to the surface of the concrete.
 - 2. Remove form marks and irregularities.
- D. Round edges to a ½ inch radius.
- E. Brush exposed surfaces to a transverse broom finish except as follows:
 - 1. Provide a parallel broom finish for gutters.

3.4 EXPANSION AND CONTRACTION JOINTS

- A. Place joints perpendicular to the subgrade and as shown.
- B. Contraction Joints
 - 1. Use ⅛ inch to ³⁄₁₆ inch thick steel plates.
 - 2. Space the joints 10 ft apart.
 - 3. Remove the templates as soon as the concrete initially sets.
 - 4. Cut joint 1½ inch deep when using slip form method to place the concrete.
- C. Expansion Joints
 - 1. Use ½ inch thick premolded expansion joint filler.

2. Place an expansion joint every 30 ft with the following exception not to place:
 - a. Slip form method to place concrete.
 - b. Gutters.
3. Place joint filler between the sidewalk or median filler and the curb or adjacent pavement, sidewalk, driveway pavement, or structure.

3.5 CONCRETE CURING

- A. Refer to Section 03390.

END OF SECTION

PIN # 9713**

SECTION 02826S

SNOW FENCE

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Material and procedures for installing snow fence.

1.2 RELATED SECTIONS

- A. Section 03055: Portland Cement Concrete

1.3 REFERENCES Not Used

1.4 DEFINITIONS Not Used

1.5 SUBMITTALS

- A. Manufacturer's product data, specifications, and recommended installation instructions.
- B. Manufacturer's labeling.

PART 2 PRODUCTS

2.1 SNOW FENCE

- A. Perma-Rail Snow Predator or approved equivalent.
 - 1. Perma-Rail International Contact Information:
Perma-Rail International, Inc.
1060 Centre Avenue, Idaho Falls, ID 83402
800-575-4780
www.snowfence.com
- B. 8 foot high fence.

- C. 6 inch wide rails.
- D. Fence porosity: 20%
- E. Do not powder coat posts.

2.2 CONCRETE

- A. Class B(AE) Concrete. Refer to Section 03055.
- B. Contractor may substitute higher class of concrete.

PART 3 EXECUTION

3.1 SNOW FENCE

- A. Obtain utility information through Blue Stakes. If utility conflict exists, contact the Engineer prior to constructing the snow fence.
- B. Clear and grub as needed, and grade to provide level ground between fence posts.
- C. Install per manufacturer's specifications, details and installation instructions.
 - 1. Contact manufacturer representative two weeks prior to beginning work. Representative must be on site during installation.
- D. Place post sleeves and line posts at 12 foot spacing.
- E. Place oscillation dampers at center of each section, between line posts, as per manufacturer's installation instructions.

3.2 SLOPE RESTORATION

- A. Restore any disturbed slopes to original condition at no cost to the Department.

END OF SECTION

SECTION 02841M

W-BEAM GUARDRAIL

Delete Article 3.1, paragraph C and replace with the following:

- C. Have a certified guardrail installer present at each location within the project and be an active participant during the installation and maintenance repair of guardrail or elements of a W-Beam guardrail system.

Delete Article 3.3, paragraph B and replace with the following:

- B. Drive post if satisfactory results are obtained without damaging the post.
 - 1. Do not drive posts through asphalt. Refer to BA 4D Series Standard Drawings.

Add Article 3.6:

3.6 Raising Existing W-Beam Guardrail

- A. Raise W-beam guardrail to maintain the minimum rail height according to BA Series Standard Drawings.
 - 1. Only W-beam guardrail with three-hole post system is eligible to be raised. Raise the three-hole post systems rail element only if the rail element is not currently set in the highest hole.
 - 2. W-beam guardrail with single-hole post system cannot be raised. Do not lift posts in order to raise rail.
- B. Remove existing rail element and blocks.
- C. Complete shoulder grading as required by BA Series Standard Drawings.
- D. Reinstall rail elements and blocks on existing three-hole post system using the next hole up on the three-hole system to meet the height requirements according to BA Series Standard Drawings.
 - 1. Do not drill new holes in posts.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 02843M

CRASH CUSHIONS AND BARRIER END TREATMENTS

Delete Article 3.1, paragraph A2b and replace with the following:

- b. Crash Cushion Type C and End Treatment Types F, G, and H.
 - 1) Create block out hole by forming, saw cutting, or other similar method required when installing ground mounted system into asphalt or concrete.
 - 2) Refer to BA 4D Series Standard Drawings.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 02844M

CONCRETE BARRIER

Delete Article 1.2, paragraph E - J and replace with the following:

- E. Section 03056: Self-Consolidating Concrete (SCC)
- F. Section 03152: Concrete Joint Control
- G. Section 03211: Reinforcing Steel and Welded Wire
- H. Section 03310: Structural Concrete
- I. Section 03390: Concrete Curing
- J. Section 03392: Penetrating Concrete Sealer
- K. Section 09981: Concrete Coating
- L. Section 13553: ATMS Conduit

Add the following to Article 1.3:

- G. ASTM C 1315: Liquid Membrane-Forming Compounds Having Special Properties for Curing and Sealing Concrete

Add the following to Article 2.1:

- B. SCC – Refer to Section 03056

Delete Article 2.6, paragraph C and replace with the following:

- C. Prevent cracking or damage during handling and storage of precast units. Replace units with cracks greater than .007 inch or damaged precast units at no additional cost to the Department.

Delete Article 2.8 and replace with the following:

2.8 SURFACE SEALING MATERIAL

- A. Penetrating concrete sealer – Refer to Section 03392.
- B. Concrete coating – Refer to Section 09981.
 - 1. Use only when colored concrete coating is specified.
 - 2. Coating system includes water repellent and two coats of tinted concrete sealer.

Add the following to Article 3.2:

- D. Curing – Refer to Section 03390.

Delete Article 3.3, paragraph E and replace with the following:

- E. Mark barrier at beginning, end, and 1,000 ft intervals with 1½ inch numbers indicating the date of casting. Impress ¼ inch deep into the front face of barrier, 6 inches below the top.

Delete Article 3.3, paragraph G and replace with the following:

- G. Seal concrete surfaces with a penetrating concrete sealer or a concrete coating.
 - 1. Penetrating concrete sealer
 - a. Use when a colored concrete coating is not specified.
 - b. Not required when curing compound meets ASTM C 1315. Refer to Section 03390.
 - c. Refer to Section 03392.
 - 2. Concrete Coating
 - a. Use when a colored concrete coating is specified.
 - b. Refer to Section 09981.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 02890M

RETROREFLECTIVE SHEETING

Delete Article 2.2, paragraph A1 and replace with the following:

1. Meet or exceed the minimum requirements of ASTM Type XI.

Delete Article 2.3, paragraph A1a and replace with the following:

- a. Meet or exceed the minimum requirements of ASTM Type XI.

Delete Article 2.3, paragraph C1 and replace with the following:

1. Vertical panels, barricade Types I, II, and III, and directional indicator barricades.
 - a. Meet or exceed the minimum requirements of ASTM Type XI.
 - b. Use of standard orange acceptable.

Delete the text immediately following Table 3 and replace with the following:

4. Use fluorescent retroreflective sheeting for orange and yellow.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 02891M

TRAFFIC SIGNS

Delete Article 1.3 and replace with the following:

1.3 REFERENCES

- A. ASTM A 123 / A 123M: Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
- B. ASTM A 513: Electric-Resistance-Welded Carbon and Alloy Steel Mechanical Tubing
- C. ASTM A 653: Steel, Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvanized) by Hot-Dip Process
- D. ASTM A 787: Electric-Resistance-Welded Metallic-Coated Carbon Steel Mechanical Tubing
- E. ASTM B 209: Aluminum and Aluminum-Alloy Sheet and Plate
- F. American Plywood Association (APA) Product Standard

Delete Article 1.4, paragraph A1 and replace with the following:

- A. Traffic Sign Components
 - 1. Panel – Assembly of substrate and attached sheeting. Several panels may be necessary to complete one sign. Panel types are:
 - a. Type
 - 1) A: Retroreflective sheeting on sheet aluminum.
 - 2) PW: Retroreflective sheeting on plywood-backed sheet aluminum.
 - b. Legend
 - 1) Non-reflective legend and border.
 - 2) Retroreflective legend and border.

Delete Article 2.1, paragraph B and replace with the following:

- B. Substrate Aluminum – 0.080 or 0.125 inch thick as follows. Refer to ASTM B 209 alloy 6061-T6, or 5052-H38.
 - 1. Use 0.125 for signs installed on frame and Gore signs.
 - 2. Use 0.080 for all other signs.

Delete Article 2.1, paragraph C and replace with the following:

- C. Plywood Backing – According to APA product standard PS 1-83, Group One: ½ inch thick.
 - 1. 90/90, high density BB exterior (Douglas Fir) B Grade.
 - 2. Plugged-core (Douglas Fir) with ½ inch maximum gaps.

Delete Article 2.1, paragraph E and replace with the following:

- E. Posts, “T” and “U” brackets, extensions, and hardware according to SN Series Standard Drawings.
 - 1. Post P1
 - a. 2³/₈ inch outside diameter 0.080 (14 Gauge)
 - b. Refer to ASTM A 513 or ASTM A 787
 - c. Galvanize according to ASTM A 653 or ASTM A 123
 - d. Color – Powder coated as required
 - 2. Post P2
 - a. 2³/₈ inch outside diameter 0.095 (13 Gauge)
 - b. Refer to ASTM A 513 or ASTM A 787
 - c. Galvanize according to ASTM A 653 or ASTM A 123
 - d. Color – Powder coated as required
 - 3. Post P3
 - a. 2⁷/₈ inch outside diameter 0.134 (BWG 10)
 - b. Refer to ASTM A 513 or ASTM A 787
 - c. Galvanize according to ASTM A 653 or ASTM A 123
 - d. Color – Powder coated as required
 - 4. Post P4
 - a. 2⁷/₈ inch outside diameter 0.160 (NP 40)
 - b. Refer to ASTM A 513 or ASTM A 787
 - c. Galvanize according to ASTM A 653 or ASTM A 123
 - 5. Post P5
 - a. 2⁷/₈ inch outside diameter 0.276 (SCH 80)
 - b. Refer to ASTM A 513 or ASTM A 787
 - c. Galvanize according to ASTM A 653 or ASTM A 123
 - 6. “T” and “U” Extension and 90 degree Post Extension
 - a. Manufacture according to SN Series Standard Drawings.
 - b. Galvanize according to ASTM A 653 or ASTM A 123

7. Standard Pipe Posts
 - a. Match post size with base requirements.
8. S Section and W Section steel posts
 - a. Structural Steel: Refer to Section 05120.
 - b. Match post size with base requirements

February 28, 2013

SPECIAL PROVISION

**PROJECT # F-0248(16)3
PIN # 9713**

SECTION 02924S

INVASIVE WEED CONTROL

Add Section 02924:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Controlling the introduction and spread of noxious weeds on construction projects.

1.2 RELATED SECTIONS Not Used

1.3 REFERENCES

- A. Utah Noxious Weed Control Act

1.4 DEFINITIONS

- A. Noxious weeds subject to control are listed on the Utah State Noxious Weed List and the county's weed list that applies based on the project location.
- B. Refer to the Section, article 3.3 for a list of the Utah State Noxious Weeds (Table 1) and the county lists (Table 2) for additional noxious weeds.

1.5 SUBMITTALS Not Used

1.6 PAYMENT PROCEDURES

- A. Include payment for cleaning earth-moving construction equipment under mobilization.
- B. Pay for the control of invasive weeds using pre-emergent, selective, and non-selective herbicides by the unit area.

1.7 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Follow all regulatory, application, and safety precautions listed by the herbicide manufacturer. Refer to Utah Noxious Weed Control Act: Utah Code - Title 04 - Chapter 17.
 - 2. Apply herbicides using only state licensed pesticide applicators.

1.8 SEQUENCING

- A. Clean all earth-moving equipment before bringing them on the project.
- B. Treat existing noxious weeds 10 days before starting earthwork operations.

PART 2 PRODUCTS

2.1 HERBICIDE

- A. Refer to this Section, article 3.3 for a list of noxious weeds subject to control and the recommended herbicide for each species.
- B. Use commercially available herbicides specified to control the weed species identified.

PART 3 EXECUTION

3.1 PREPARATION

- A. Use high-pressure water blasting or steam cleaning methods to clean all earth-moving construction equipment (scrapers, bulldozers, excavators, backhoes, trenchers) of dirt, mud, and seed residue before initially entering the project.

3.2 EXAMINATION

- A. Verify and locate all noxious weeds on the project. Contact the county weed control supervisor or the Department's region landscape architect if assistance is needed for identification.

3.3 CONTROLLING INVASIVE WEEDS

- A. Spray invasive weeds located within the project limits before starting earth disturbing activities and if they appear during construction. Use pre-emergent, selective, and non-selective herbicides as appropriate (See Noxious Weed Tables 1 and 2 below). Apply herbicide as directed on the manufacturer's label.
- B. Noxious Weed Tables:

Table 1

Utah State Noxious Weeds		
Common Name	Scientific Name	Herbicide
Bermudagrass*	<i>Cynodon dactylon</i>	Glyphosate
Black henbane	<i>Hyoscyamus niger</i>	Tordon (picloram) & Escort
Canada thistle	<i>Cirsium arvense</i>	2,4-D, Dicamba, Picloram
Dalmation toadflax	<i>Linaria genistifolia</i>	Tordon (picloram)
Diffuse knapweed	<i>Centaurea diffusa</i>	2,4-D+Dicamba or Picloram or Clopyralid
Dyer's woad	<i>Isatis tinctoria</i>	2,4-D+Dicamba or Chlorsulfuron
Field bindweed	<i>Convolvulus arvensis</i>	Dicamba+2,4-d or Picloram
Hoary cress, (whitetop)	<i>Cardaria draba</i>	2,4-D+Dicamba or Chlorsulfuron
Houndstounge	<i>Cynoglossum officinale</i>	Tordon (picloram)
Johnsongrass	<i>Sorghum halepense</i>	Glyphosate
Leafy Spurge	<i>Euphorbia esula</i>	Dicamba or Picloram
Medusahead	<i>Taeniatherum caput-medusae</i>	Glyphosate
Musk thistle	<i>Carduus nutans</i>	2,4-D amine, Metsulfuron or Picloram
Ox-eye daisy	<i>Chrysanthemum leucanthemum</i>	Tordon (picloram) & clopyralid
Perennial pepperweed	<i>Lepidium latifolium</i>	Metsulfuron or Chlorsulfuron
Perennial sorghum	<i>Sorghum halepense</i>	Glyphosate
Poison hemlock	<i>Conium maculatum</i>	Tordon (picloram)
Purple loosestrife	<i>Lythrum salicaria</i>	Glyphosate (Rodeo aquatic label)

Quackgrass	<i>Elytrigia repens</i>	Glyphosate
Russian knapweed	<i>Centaurea repens</i>	Picloram, Clopyralid or Chlorsulfuron
Saltcedar	<i>Tamarix ramosissima</i>	Habitat or Arsenal
Scotch thistle	<i>Onopordum acanthium</i>	2,4-D amine, Metsulfuron or Picloram
Spotted knapweed	<i>Centaurea maculosa</i>	2,4-D+Dicamba, Picloram or Clopyralid
Squarrose knapweed	<i>Centaurea virgata</i>	Picloram
St. Johnswort	<i>Hypericum perforatum</i>	Tordon (picloram) & Escort
Sulfur cinquefoil	<i>Potentilla recta</i>	Tordon (picloram)
Yellow star-thistle	<i>Centaurea solstitialis</i>	Picloram or Clopyralid
Yellow toadflax	<i>Linaria vulgaris</i>	Tordon (picloram)
*Do not consider Bermudagrass a noxious weed in Washington County		

Table 2

County Noxious Weeds		
Common Name	Scientific Name	Herbicide
Beaver County		
Bull thistle	<i>Cirsium vulgare</i>	2,4-D amine or Dicamba
Box Elder		
Catchweed	<i>Asperugo procumbens</i>	2,4-D amine or Dicamba
Cache County		
Goatsrue	<i>Galega officinalis</i>	2,4-D+Dicamba
Puncturevine	<i>Tribulus terrestris</i>	2,4-D+Dicamba
Carbon County		
Russian olive	<i>Elaeagnus angustifolia</i>	2,4-D, Dicamba, or Glyphosate
Davis County		
Buffalobur	<i>Solanum rostratum</i>	2,4-D or Dicamba
Yellow nutsedge	<i>Cyperus esculentus</i>	Glyphosate
Duchesne County		
Russian olive	<i>Elaeagnus angustifolia</i>	2,4-D, Dicamba, or Glyphosate
Water hemlock	<i>Cicuta maculata</i>	2,4-D amine or Dicamba

Grand County		
Russian olive	<i>Elaeagnus angustifolia</i>	2,4-D, Dicamba, or Glyphosate
Iron County		
Western whorled milkweed	<i>Asclepias subverticillata</i>	2,4-D or Dicamba
Bull thistle	<i>Cirsium vulgare</i>	2,4-D amine or Dicamba
Puncturevine	<i>Tribulus terrestris</i>	2,4-D+Dicamba
Juab County		
Blue lettuce	<i>Lactuca pulchella</i>	2,4-D amine, Arsenal or Metsulfuron
Morgan County		
Common burdock	<i>Arctium minus</i>	2,4-D+Dicamba
Salt Lake County		
Garlic mustard	<i>Alliaria petiolata</i>	Glyphosate
Myrtle spurge	<i>Euphorbia myrsinites</i>	Glyphosate or Dicamba
San Juan County		
Camelthorn	<i>Alhagi pseudalhagi</i>	Arsenal
Russian olive	<i>Elaeagnus angustifolia</i>	2,4-D, Dicamba, or Glyphosate
Buffalobur	<i>Solanum rostratum</i>	2,4-D or Dicamba
Western whorled milkweed	<i>Asclepias subverticillata</i>	2,4-D or Dicamba
Sevier County		
Russian olive	<i>Elaeagnus angustifolia</i>	2,4-D, Dicamba, or Glyphosate
Summit County		
Common Burdock	<i>Arctium minus</i>	2,4-D+Dicamba
Vipers bugloss	<i>Anchusa officinalis</i>	2,4-D amine or Dicamba
Tooele County		
Jointed goatgrass	<i>Aegilops cylindrica</i>	Glyphosate
Uintah County		
Russian olive	<i>Elaeagnus angustifolia</i>	2,4-D, Dicamba, or Glyphosate
Utah County		
Common reed	<i>Phragmites australis</i>	
Washington County		
Western whorled milkweed	<i>Asclepias subverticillata</i>	2,4-D, or Dicamba
Silverleaf nightshade	<i>Solanum elaeagnifolium</i>	2,4-D or Dicamba

Wayne County		
Russian olive	<i>Elaeagnus angustifolia</i>	2,4-D, Dicamba, or Glyphosate
Bull thistle	<i>Cirsium vulgare</i>	2,4-D amine or Dicamba
Weber County		
Puncturevine	<i>Tribulus terrestris</i>	2,4-D+Dicamba
Use rates: Use rates for herbicides vary, follow the use rate on the LABEL for each herbicide		

END OF SECTION

August 17, 2011

SPECIAL PROVISION

**PROJECT# F-0248(16)3
PIN# 9713**

SECTION 02961M

ROTOMILLING

Add Article 2.2 paragraph A.4:

4. Use a minimum 12 foot mill head on Interstates and a minimum 7 foot mill head on all other roads or as directed by the engineer.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 03055M

PORTLAND CEMENT CONCRETE

Delete Article 1.2 and replace with the following:

1.2 RELATED SECTIONS

- A. Section 03390: Concrete Curing

Delete Article 1.4 and replace with the following:

1.4 DEFINITIONS

- A. Cold Weather Protection Period: The required time during which the concrete is maintained at or above a specific temperature to prevent freezing of the concrete and to ensure the necessary strength development for structural safety.

Delete Article 1.5, paragraphs F, F, G, and H, and replace with the following:

- F. Written plan for admixtures. Refer to this Section, Article 2.5, paragraph C.
- G. Verification that fly ash or other pozzolan used is from a pre-qualified supplier. Refer to this Section, Article 2.6, paragraph D.
- H. Verification that the batch plant meets the requirements of the UDOT Quality Management Plan for Ready-Mix Concrete.
- I. Cold Weather Concreting Plan and Hot Weather Concreting Plan for approval.
 - 1. Include the following:
 - a. Detailed procedures for the placement, protection, curing, and temperature monitoring of concrete during cold and hot weather.
 - b. Procedures to be implemented upon abrupt changes in weather conditions or equipment failures.

- c. Refer to this Section, Article 3.4, paragraph D for cold weather concreting requirements and Article 3.4, paragraph E for hot weather concreting requirements.
2. Allow the Engineer 10 calendar days to review and approve the plans.
 - a. The Engineer may grant an increase in contract time when this review and approval time is exceeded.
 - b. This review period applies each time the plans are submitted.
3. Do not begin cold weather concreting before the Cold Weather Concreting Plan is approved.
4. Do not begin hot weather concreting before the Hot Weather Concreting Plan is approved.
5. Not required for precast concrete members provided by prequalified suppliers. Refer to this Section, Article 3.4D1.

Delete Article 2.1, Table 2, note ** and replace with the following:

** For $f'c$ over 4,000 psi, design and proportion mixes according to ACI Manual of Concrete Practice 301: Specifications for Concrete and project specific criteria. Use Table 2 Class AA(AE) Air Content Percentages according to coarse aggregate size for these mixes.

Delete Article 3.4, paragraphs D and E, and replace with the following:

- D. Cold Weather – Comply with the following when placing, finishing, curing, and protecting concrete exposed to cold weather during the protection period. Cold weather applies when the temperature is forecast to fall below 35 degrees F during the protection period.
 1. Provide necessary cold weather protection for placing, finishing, curing and protecting in-place concrete such as covers, insulation, and heat.
 - a. Follow the approved Cold Weather Concreting Plan when placing cast-in-place concrete.
 - b. Follow the prequalified supplier's approved Quality Control Plan when fabricating precast concrete members.
 2. Concrete materials
 - a. Do not use chemical anti-freeze additives in the concrete. This does not apply to normal accelerators. Refer to AASHTO M 194.
 - b. Remove and replace concrete damaged by frost action at no additional cost to the Department.
 - c. Do not use material containing frost or lumps.

3. Determine the concrete compressive strength by one of the following methods:
 - a. Field cured cylinders cured and protected the same as the concrete being protected.
 - b. Maturity method. Refer to AASHTO T 325.
4. Maintain the temperature of the concrete at or above 50 degrees F during and after placement until the end of the protection period.
 - a. Measure the specified concrete temperature at the concrete surface. Use surface thermometers insulated from the surrounding air.
5. Placing concrete
 - a. Do not place concrete during adverse weather including rain, snow, and high winds without adequate protection approved by the Engineer.
 - b. Do not proceed with the placement of concrete if the temperature of all contact surfaces, including reinforcement, is less than 36 degrees F or greater than 95 degrees F.
 - c. Cease placement operations when the ambient temperature is 40 degrees F and decreasing unless adequate precautions are taken according to the approved Cold Weather Concreting Plan.
6. Protection of in-place concrete
 - a. Maintain the concrete above 50 degrees F during placement and until the end of the protection period.
 - 1) The protection period is the time required for the concrete to reach a compressive strength of at least 3,500 psi.
 - 2) Extend the duration of the protection period at least 24 hr beyond the termination of the cure before exposing the concrete to freezing temperatures when curing by the water method. Refer to Section 03390.
 - b. Comply with the following when heating is required.
 - 1) Adequately vent combustion-type heaters that produce carbon monoxide.
 - 2) Position heaters and ducts so the hot dry air does not cause areas of the concrete surface to overheat or dry.
 - 3) Keep concrete surfaces moist to avoid excessive loss of moisture from the concrete when applying external heat.
7. Termination of protection
 - a. Limit the drop in temperature of concrete surfaces to 40 degrees F during any 24 hour period when removing cold weather protection until the surface temperature of the concrete reaches that of the ambient air temperature.

- E. Hot Weather – Comply with the approved Hot Weather Concreting Plan and with the following when placing, finishing, curing, and protecting concrete exposed to hot weather during the protection period. Hot weather applies when the temperature is forecast to rise above 95 degrees F during the protection period:
1. Cool all surfaces that will come in contact with the concrete to below 95 degrees F.

SECTION 03211M

REINFORCING STEEL AND WELDED WIRE

Delete Article 1.3 and replace with the following:

1.3 REFERENCES

- A. AASHTO M 31: Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement
- B. AASHTO M 55: Steel Welded Wire Reinforcement, Plain, for Concrete
- C. AASHTO M 111: Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
- D. AASHTO M 235: Epoxy Resin Adhesives
- E. AASHTO T 106: Compressive Strength of Hydraulic Cement Mortar (Using 50-mm or 2-in Cube Specimens)
- F. ASTM A 108: Steel Bar, Carbon and Alloy, Cold-Finished
- G. ASTM A 493: Stainless Steel Wire and Wire Rods for Cold Heading and Cold Forging
- H. ASTM A 706: Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement
- I. ASTM A 767: Zinc-Coated (Galvanized) Steel Bars for Concrete Reinforcement
- J. ASTM A 775: Epoxy-Coated Steel Reinforcing Bars
- K. ASTM A 955: Deformed and Plain Stainless-Steel Bars for Concrete Reinforcement
- L. ASTM A 970: Headed Steel Bars for Concrete Reinforcement
- M. ASTM E 1512: Testing Bond Performance of Bonded Anchors
- N. American Welding Society (AWS) Standards

- O. Concrete Reinforcing Steel Institute (CRSI) Manual of Standard Practice
- P. UDOT Quality Management Plans (QMP)

Add the following to Article 2.1:

- C. Refer to ASTM A 955, Type XM-28, Grade 60 for deformed or plain stainless steel bars.

Delete Article 2.2, paragraph A and replace with the following:

- A. Refer to ASTM A 775 or AASHTO M 111.

Delete Article 2.7, paragraph B and replace with the following:

- B. Provide epoxy coated, painted, or plain basket assemblies with a U-shaped leg for the assembly frame and a minimum 0.3 inch diameter wire with sufficient structure to maintain the proper location and alignment of dowels during concrete pavement placement as approved by the Engineer.

Add the following to Article 2.7:

- D. Provide bar supports and wire ties for use with stainless steel bars that meet the following:
 - 1. Meet the requirements of Table 2.
 - 2. Provide bar supports that are plastic coated, epoxy coated, plastic, or stainless steel conforming to the requirements of ASTM A 493, Type 316.
 - 3. Provide wire ties that are plastic coated, plastic, or stainless steel conforming to the requirements of ASTM A 493, Type 316, annealed.
 - 4. Provide tie-down wires that are plastic coated or stainless steel conforming to the requirements of ASTM A 493, Type 316, annealed.

Add the following to Article 2.8:

- D. Use stainless steel splice coupler with stainless steel reinforcement.

Delete Article 3.1, paragraph B.1.a and replace with the following:

- a. Meet requirements of ASTM A 775 Appendix A.2 for repair material.

Add the following to Article 3.1:

- E. Ship, handle, and store stainless reinforcing steel so it does not come in contact with carbon steel.
 - 1. Cover stainless reinforcing steel with tarps during outdoor storage.
 - 2. Separate bundles of stainless reinforcing steel from other types of reinforcing steel with wooden spacers.
 - 3. Store stainless reinforcing steel on wooden supports off the ground or floor.

Add the following to Article 3.2:

- O. Place stainless steel reinforcement so that it does not come in contact with carbon steel.
 - 1. Do not tie stainless steel to uncoated or coated carbon steel reinforcement, galvanized attachments, or galvanized conduits.
 - a. Direct contact is not acceptable.
 - b. Use nylon or polyethylene spacers to maintain a minimum 1 inch clearance between the two metals and bind them with nylon cable ties when stainless reinforcing steel or dowels must be near coated or uncoated carbon steel reinforcing or galvanized metals,.
 - c. Either bar may be sleeved with a continuous $\frac{1}{8}$ inch minimum thickness polyethylene or nylon tube extending at least 1 inch in each direction past the point of closest contact between the two dissimilar bars where insufficient space exists to maintain this minimum.
 - 2. Use only epoxy coated or non-metallic snap ties, straps, or other forming hardware in members that use stainless steel reinforcement to prevent corrosion from dissimilar metals.

SPECIAL PROVISION

**PROJECT #F-0248(16)3
PIN #9713**

SECTION 03372S

THIN BONDED POLYMER OVERLAY

Delete Section 03372 in its entirety and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Thin bonded polymer overlay system applied to concrete bridge decks and approach slabs.
- B. Removal of existing polymer overlay from concrete bridge decks and approach slabs.
- C. Repair of damaged areas of a polymer overlay system.

1.2 RELATED SECTIONS Not Used

1.3 REFERENCES

- A. ASTM C 25: Chemical Analysis of Limestone, Quicklime, and Hydrated Lime
- B. ASTM C 88: Soundness of Aggregates by Use of Sodium Sulfate or Magnesium Sulfate
- C. ASTM C 131: Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine
- D. ASTM C 566: Total Evaporable Moisture Content of Aggregate by Drying
- E. ASTM C 579: Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing, and Polymer Concretes
- F. ASTM C 881: Epoxy-Resin-Base Bonding Systems for Concrete
- G. ASTM D 570: Water Absorption of Plastics

- H. ASTM D 638: Tensile Properties of Plastics
- I. ASTM D 790: Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials
- J. ASTM D 2240: Rubber Property – Durometer Hardness
- K. ASTM D 4285: Indicating Oil or Water in Compressed Air
- L. ASTM D 4580: Measuring Delaminations in Concrete Bridge Decks by Sounding
- M. ASTM D 5821: Determining the Percentage of Fractured Particles in Coarse Aggregate
- N. ASTM D 6928: Resistance of Coarse Aggregate to Degradation by Abrasion in the Micro-Deval Apparatus
- O. ASTM E 274: Skid Resistance of Paved Surfaces Using a Full-Scale Tire
- P. American Concrete Institute (ACI)
- Q. International Concrete Repair Institute (ICRI)

1.4 DEFINITIONS

- A. Polymer Overlay System – A thin bonded polymer overlay applied as a wearing surface consisting of a two-part polymer resin broadcasted with aggregate to refusal before it cures.
- B. Installer – The entity preparing the surface and installing and finishing the polymer overlay system.
- C. Provider – The manufacturer furnishing the polymer overlay system.

1.5 SUBMITTALS

- A. Provider Qualifications for review at least 10 calendar days before ordering material.
 - 1. Include at least the following:
 - a. Company name.
 - b. Name and phone number of the Provider's Technical Support Representative.
 - c. List of projects using the submitted products with at least two years of satisfactory performance under similar
Thin Bonded Polymer Overlay

environmental conditions as the project in which it is to be applied. Refer to this Section, Article 1.6 B. List the following for each project:

- 1) Project name
- 2) Bridge locations (state routes and bridge identifiers)
- 3) Scope of work
- 4) Products used
- 5) Approximate date of the system opening to traffic.

B. Materials

1. Submit the following information for review at least 10 calendar days before ordering material:
 - a. Manufacturer's Product Data Sheets and recommended installation instructions.
 - b. Material Safety Data Sheets.
 - c. The Provider's certification stating that the provider is the sole provider of the components of the polymer overlay system and that the components are:
 - 1) In accordance with this Section.
 - 2) Fully compatible with one another.
 - d. The Installer's certification with the Provider's written concurrence that the polymer overlay system is fully compatible with all deck repair materials.
2. Certified test report from an independent nationally recognized laboratory stating that the polymer resins in the polymer overlay system components meet the requirements in this Section.
 - a. Test results must be from within a three year period of the submittal.
3. Certified Test Report from an AASHTO accredited testing laboratory confirming the compliance of the aggregate material with the test requirements of this Section.
 - a. Test results must be from within a one year period of the submittal.

C. Method for mixing of the polymer resins

1. The Provider's written concurrence that the selected mixing method is acceptable and compatible with the polymer overlay system.
2. Mixing ratio of the polymer resins.

D. A warranty letter to the Engineer and the Department Bridge Management Engineer stating that the Contractor guarantees the polymer overlay system against material and installation defects incurred under traffic for a period of 5 years.

1. The guarantee period starts on the date of Physical Completion.
2. Include in the letter:
 - a. State Project Designation

Thin Bonded Polymer Overlay
03372S – Page 3 of 12

- b. State Project Name
- c. State Structure Numbers
- d. Contractor, Provider, and Installer Name
- 3. Defects (performance failures) include:
 - a. Spalling: Broken or missing pieces of polymer overlay system.
 - b. Scaling: Visible, exposed, rough surface texture resulting from a loss of aggregate or resin.
 - c. Delamination: Visible or audible debonding of the polymer overlay system at the bond line (interface) with the existing bridge receiving surface.
 - d. Cracking: Visible cracks not reflected from a crack in the existing deck.
 - e. Loss of skid resistance: Skid resistance less than 40 as measured according to ASTM E 274.
- 4. The guarantee covers 100 percent of the polymer overlay system materials and installation costs and removal and replacement of the polymer overlay system for failed sections.
- 5. The Department will notify the Contractor of defects to be repaired during the guarantee period.
 - a. Submit detailed plans and procedures of corrective work according to Provider's recommendations and obtain the Department's authorization before commencing work.
 - b. Perform corrective work within 60 days of notification.

1.6 QUALITY CONTROL

- A. Technical Support Representative
 - 1. Provide a Technical Support Representative from the Provider onsite during surface preparation and application of the polymer overlay system on the first day the polymer overlay system is installed on a structure.
 - a. The Technical Support Representative must have a minimum of 3 years of experience with the system and with guiding and assisting installers in the polymer overlay system installation.
 - b. The Technical Support Representative will instruct the workers in proper mixing, application technique, safety precautions, traffic opening time, and environmental requirements.
 - c. The Technical Support Representative must be available for consultation but not necessarily present at the job site for the remaining work.
 - 2. The Department reserves the right to require the Technical Support Representative to be onsite if at any time the Engineer is concerned with the product installation quality.

- B. Prior Performance
 - 1. The selected polymer overlay system must have at least two years, for non-interstate, or four years, for interstate, of satisfactory performance in similar environmental conditions as the project in which it will be applied.
 - 2. Products without the required years of prior satisfactory performance will only be considered for use with Department's approval.
 - a. Do not use for bidding purposes.

PART 2 PRODUCTS

2.1 POLYMER OVERLAY SYSTEM

- A. Use a thin bonded polymer overlay system that chemically cures to provide an impervious wearing surface consisting of the following:
 - 1. Penetrating Crack Filler
 - 2. Polymer Resin
 - 3. Broadcast Aggregate
- B. Penetrating Crack Filler
 - 1. Provide a penetrating crack filler as required by the Provider.
- C. Polymer Resin
 - 1. Two-part Epoxy-Urethane Co-Polymer (Type 1) that meets the requirements of Table 1.
 - 2. Free of fillers, volatile solvents, and external/conventional flexibilizers.

Table 1

PHYSICAL PROPERTIES OF THE CURED POLYMER RESIN		
Property	Value	Method
Compressive Strength, min. psi	5,000	ASTM C 579
Tensile Strength, min. psi	2,000	ASTM D 638
Tensile Elongation, min. percent	30-80	ASTM D 638
Water Absorption, max. percent by wt.	1.0	ASTM D 570
Shore D Hardness, min. 77°F	60-75	ASTM D 2240
Gel Time, minutes	15-45	ASTM C 881
Adhesion to Concrete	100% failure in concrete	ACI-503-R, Pull Out Test
Flexural Yield Strength, min. psi	3,000	ASTM D 790
Percent Solids	100	

D. Broadcast Aggregate

1. Thoroughly washed and kiln dried to maximum moisture content of 0.2 percent by weight according to ASTM C 566.
2. Use aggregate with the properties shown in Table 2 with aggregate gradation according to the requirements in Table 3, or use aggregate with the properties shown in Table 4 with aggregate gradation according to the requirements in Table 5.

Table 2

BASALT OR FLINT AGGREGATE PROPERTIES	
Soundness, ASTM C 88	3.0 max
LA Abrasion, Grade D, ASTM C 131	20.0% max.
Micro Deval Abrasion, ASTM D 6928	10.0% max.
Mohs Scale Hardness	7.0 min.

Table 3

BASALT OR FLINT AGGREGATE GRADATION	
Sieve Size	Percent Passing
0.187 inch; No.4	100
0.078 inch; No.10*	10 – 35
0.033 inch; No.20	0 – 10
* 100 percent of the aggregate has at least one mechanically fractured face for materials being retained on the #10 sieve according to ASTM D 5821.	

Table 4

CALCINED BAUXITE AGGREGATE PROPERTIES	
Soundness, ASTM C 88	3.0 max
LA Abrasion, Grade D, ASTM C 131	20.0% max.
Micro Deval Abrasion, ASTM D 6928	5.0% max.
Mohs Scale Hardness	8.0 min.
Aluminum Oxide, ASTM C 25	87.0% min.

Table 5

CALCINED BAUXITE AGGREGATE GRADATION	
Sieve Size	Percent Passing
0.187 inch; No.4	100
0.132 inch; No.6	95 – 100
0.046 inch; No.16*	5 – 95
* 100 percent of the aggregate has at least one mechanically fractured face for materials being retained on the #16 sieve according to ASTM D 5821.	

2.2 EQUIPMENT

- A. Polymer Overlay Removal
 - 1. Use a diamond tipped grinder or approved method to remove an existing polymer overlay system from the deck.

- B. Metered Mixing
 - 1. Use equipment capable of metering, mixing, and distributing the polymer resin.
 - a. Use equipment that features positive displacement volumetric metering pumps controlled by a hydraulic power unit.
 - b. Use motionless, in-line mixing.
 - 2. Use equipment that is approved by the Provider.

- C. Hand Mixing
 - 1. Use equipment that is approved by the Provider.

- D. Broadcasting Aggregate
 - 1. Use mechanical equipment capable of dispensing the aggregate onto the deck in a uniform manner as required by the Provider.

PART 3 EXECUTION

3.1 STORAGE AND HANDLING

- A. Polymer Resin
 - 1. Identify the containers as Part A and Part B and plainly mark with:
 - a. Manufacturer's name
 - b. Manufacturer's address
 - c. Name of the product
 - d. Mixing proportions and instructions
 - e. Lot and batch numbers
 - f. Date of manufacture
 - g. Quantity
 - 2. Transport to and store on the job site in a dry, weather protected environment away from moisture, and within the maintained temperature range of 60 to 100 degrees F and according to Provider's recommended installation instructions.

- B. Broadcast Aggregate
 - 1. Store aggregate in a clean, dry location, protected from rain and other moisture sources.
 - 2. Protect the aggregate from contaminants on the job site.

- C. Handling Liquid Materials
 - 1. Use protective gloves, clothing, boots, and goggles when directly exposed to the material.
 - 2. Provide manufacturer's safety data sheets to workers and inspectors.

3.2 POLYMER OVERLAY REMOVAL

- A. Remove the existing polymer overlay as shown or as required by the Engineer.
 - 1. Do not damage concrete deck when removing polymer overlay.

3.3 SURFACE PREPARATION

- A. Surface Defects
 - 1. Repair deck surface defects before installing the polymer overlay system.
 - a. Use a concrete repair material that meets Provider's recommendations and is compatible with the polymer overlay system being used.
 - b. Use concrete repair materials free of magnesium phosphate.

- B. Shot-Blasting
 - 1. Clean the entire concrete deck surface with steel shot blast to remove oil, dirt, rubber, and other materials that may be detrimental to the polymer overlay bonding and curing according to the Provider's recommendations.
 - a. Use sandblasting equipment or mechanical grinders only in areas that cannot be reached with steel shot-blasting.
 - 1) Sandblast or grind before shot-blasting. Refer to ASTM D 4285.
 - 2. Produce a surface relief that meets the International Concrete Repair Institute (ICRI) Surface Preparation CSP 5-7.
- C. Traffic
 - 1. Do not allow traffic on the deck that has been shot-blasted.
 - 2. Only allow the polymer overlay system equipment on cleaned surfaces.

3.4 APPLICATION

- A. Concrete Surface
 - 1. Complete deck repairs and surface preparation before applying the polymer overlay system.
 - 2. Clean the concrete surface and apply a penetrating crack filler as required by the Provider.
 - 3. Do not apply the polymer overlay system when it has rained within 24 hours or is expected to rain within 8 hours of application.
 - 4. Verify the moisture content in the concrete substrate does not exceed 4.0 percent when measured by an electronic meter.
 - 5. Apply the polymer overlay system only when the deck and ambient air temperature is a minimum 50 degrees F and rising.
 - 6. Verify that treated surfaces are dry at the time of second application.
- B. Mixing
 - 1. Measure and mix the polymer resin components as recommended by the Provider.
 - a. Maintain mix ratios according to the Provider's recommendations.
 - 2. Mix polymer resin immediately before dispensing.
 - 3. Verify the mix ratio by volumetric sampling at the beginning of the application, mid operation, and at the end of the application of each layer.
 - a. Use containers with graduated markings with not less than 5 gallon capacity.
 - b. Remove the static mixer and dispense each component into separate containers.

- 1) Dispense at least five gallons of the primary component for ratio comparison.
 - 2) Uncontaminated samples may be returned to the reservoirs they were originally dispensed from.
- c. The Engineer or Technical Support Representative may request additional sampling.

C. First and Second Layers of Overlay

1. Evenly distribute the polymer resin on the clean, dry deck surface at the rate recommended by the Provider.
 - a. Use new notched squeegees, $\frac{3}{16}$ inch minimum, on the first lift of every application to verify sufficient thickness of the overlay.

D. Overlay Thickness

1. Provide the number of layers and application rates of the liquid in each layer according to the Provider's recommendations.
2. Provide a total overlay thickness of at least 3/8 inch.

E. Time Limits for Broadcast Aggregate

1. Use the following maximum time allowed after application of liquid before broadcasting the aggregate in Table 6 unless directed otherwise by the Provider.

Table 6

Time Limits	
Temperature	Maximum Time
Above 90°F	10 minutes
80°F to 90°F	15 minutes
70°F to 80°F	20 minutes
60°F to 70°F	25 minutes
50°F to 60°F	35 minutes

F. Broadcasting Aggregate

1. Broadcast the aggregate before the polymer begins to gel.
 - a) Cover the surface until no wet spots remain.
2. Drop the aggregate vertically so the level of the liquid is not disturbed.

G. Remove Excess Aggregate

1. Completely remove excess and loose aggregate after the overlay has hardened by vacuum or with compressed air before applying subsequent layers according to the Providers recommendations. Refer to ASTM D 4285.

- H. Longitudinal Joints in the Overlay
 - 1. Stagger and overlap joints between successive layers 6 to 12 inches so that no ridges appear between two adjacent lanes.
 - 2. Maintain straight construction joints between adjacent placements and lifts.

- I. Traffic
 - 1. Do not allow vehicles on the polymer overlay while it is curing.
 - 2. Allow traffic on the final layer or in between layers after the resin has cured, as determined by the Provider, and after removal of excess and loose aggregate.
 - a) Brush blast the surface with shot blast according to the Provider's recommendations before applying additional layers when traffic has been allowed on the cured surface between layers.

- J. Work performed contrary to the Technical Support Representatives instructions will be deemed non-conforming.

3.5 LIMITATIONS

- A. New Bridge Decks and Approach Slabs
 - 1. Cure newly placed concrete for at least 28 calendar days before beginning installation of polymer overlay system.

- B. Bridges constructed offline and moved into their final location by self propelled modular transporters (SPMT)
 - 1. Apply the polymer overlay system no sooner than 30 calendar days after setting the bridge in its final location.

- C. Prevent material and debris from falling into streams, pedestrian areas, live traffic, or railroad tracks.

3.6 POLYMER OVERLAY REPAIR

- A. Locate and mark visible polymer overlay repair areas as shown and in the presence of the Engineer.
 - 1. Sound the polymer overlay around repair area for delamination of the polymer overlay to determine repair limits.
 - 2. Square off the edges of polymer overlay system repair area six inches beyond the determined limits and parallel to the travel lane.
 - 3. Sawcut the perimeter of polymer overlay system repair area with a 1/2" deep sawcut.

- B. Remove existing polymer overlay within the repair area according to this Section, Article 3.2.

1. Sound the concrete deck in the repair area for delamination of the concrete deck to determine the need for structural pothole patching. Refer to ASTM D 4580.
- C. Prepare the deck surface within the repair area according to this Section, Article 3.3.
- 1) Do not substitute sandblasting or mechanical grinding where shot blasting is required.
- D. Apply the polymer overlay system within the repair area according to this Section.

END OF SECTION

**Supplemental Specification
2012 Standard Specification Book**

SECTION 03390

CONCRETE CURING

Delete Section 03390 in its entirety and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Concrete curing materials and methods.
- B. This section does not apply to cast-in-place Portland Cement Concrete Pavement and Lean Concrete Base Course. Refer to Section 02752.
- C. This section does not apply to dry cast precast concrete members, except for precast concrete box and three-sided culvert structures.

1.2 RELATED SECTIONS

- A. Section 02752: Portland Cement Concrete Pavement
- B. Section 03055: Portland Cement Concrete
- C. Section 03310: Structural Concrete

1.3 REFERENCES

- A. ASTM C 309: Liquid Membrane-Forming Compounds for Curing Concrete
- B. ASTM C 1315: Liquid Membrane-Forming Compounds Having Special Properties for Curing and Sealing Concrete
- C. UDOT Quality Management Plans

1.4 DEFINITIONS **Not Used**

1.5 SUBMITTALS

- A. Manufacturer's product data, specifications, and recommended installation instructions.

PART 2 PRODUCTS

2.1 CURING COMPOUND

- A. Refer to this Section, Part 3, Tables 1 and 2.
- B. Limit Volatile Organic Compounds (VOC) content to 350 grams / liter maximum.

PART 3 EXECUTION

3.1 CURING MEASURES

- A. Prevent drying of exposed concrete surfaces after placing concrete and until applying the selected curing method.
 - 1. Keep exposed concrete surfaces moist by fogging if the surfaces begin to dry before the selected curing method can be applied.
- B. Cure all newly placed concrete to prevent loss of water by one or more of the following methods according to this Section.
 - 1. Forms-in-Place Method (FIPM)
 - a. Cure formed surfaces of concrete by retaining the forms in place without loosening for the specified curing period.
 - b. Complete the cure using one of the methods specified for the element when forms are removed before completing the specified curing period.
 - 1) Prevent drying of the exposed concrete surfaces while transitioning between curing methods.
 - 2. Water Method (WM)
 - a. Keep concrete surfaces continuously wet by ponding, spraying, or covering with materials that are continuously and thoroughly wet.
 - 1) Acceptable materials for covering concrete surfaces include cotton mats, multiple layers of burlap, or other materials that retain water.
 - 2) Secure the cover materials to prevent wind or other forces from removing them.
 - 3) Keep the cover materials saturated throughout the curing period.
 - b. Do not erode or damage the finish.
 - c. Prevent excess water from impacting traffic on in-service roadways.

3. Liquid Membrane-Curing Compound Method (LMCCM)
 - a. Thoroughly seal exposed concrete surfaces with a liquid membrane-curing compound immediately after finishing operations are completed for exposed concrete surfaces or immediately after forms are removed and necessary patching is complete when forms are removed before the end of the curing period.
 - b. Apply liquid membrane-curing compound uniformly at the rates specified in Tables 1 and 2.
 - c. Immediately repair damage to the curing compound film during the specified curing period by re-spraying.
4. Waterproof Cover Method (WCM)
 - a. Exposed concrete surfaces must be wet before installing cover.
 - b. Cover exposed concrete surfaces with a material that prevents moisture loss from the concrete.
 - 1) Do not use materials that have lost their waterproof qualities.
 - 2) Secure cover to prevent displacement by wind.
 - c. Use this method only when the covering can be secured adequately to prevent moisture loss.
 - d. Maintain the air temperature beneath the cover at not less than 50 degrees F.
 - 1) The use of insulated blankets is permitted.
5. Steam or Radiant-Heat Method (SRHM)
 - a. Use only for precast concrete members manufactured in prequalified plants.
 - b. Use a complete steam or radiant heat curing system that includes 24 hour temperature control and monitoring devices.
 - 1) Use temperature recording devices as necessary to verify that temperatures are uniform throughout the enclosure and within the limits specified.
 - c. Steam Heat Curing System
 - 1) Use a suitable enclosure to contain live steam and minimize moisture and heat losses.
 - 2) Use low-pressure and saturated steam.
 - 3) Maintain 90 to 100 percent relative humidity in the curing enclosure.
 - 4) Do not apply heat directly on the concrete or cause localized high temperatures.
 - d. Radiant Heat Curing System
 - 1) Apply heat by means of pipes circulating steam, hot oil, or hot water, or by electric heating elements.
 - 2) Use a suitable enclosure to contain the heat.

- 3) Minimize moisture loss by covering exposed concrete surfaces with plastic sheeting.
- e. Waiting Period
- 1) Do not apply the initial application of heat before the initial set of the concrete except to maintain the minimum temperature within the curing enclosure.
 - 2) Maintain the temperature within the curing enclosure at not less than 50 degrees F. Live steam or radiant heat may be used to maintain the curing enclosure at the proper minimum temperature. Keep the concrete wet during this period.
- f. Curing Period
- 1) Increase the temperature within the concrete during the initial application of heat at an average rate not to exceed 40 degrees F per hour until the curing temperature is reached.
 - 2) Do not exceed a concrete temperature of 160 degrees F when applying heat.
 - 3) Maintain the concrete temperature at between 50 degrees F and 160 degrees F.
 - 4) Maintain the curing temperature until the concrete achieves the specified strength for terminating the curing.
 - 5) Decrease the concrete temperature at a rate not to exceed 40 degrees F per hour until reaching a temperature of not more than 20 degrees F above the air temperature to which the concrete will be exposed when discontinuing heat.
- g. Transfer the stressing force to the concrete immediately after discontinuing steam curing or radiant heat curing for prestressed members.
- C. Prevent exposed concrete surfaces from drying when transitioning between curing methods.
- D. Fogging
1. Use fogging when necessary to prevent drying of exposed concrete surfaces.
 2. Use fogging equipment with compressed air misters that atomize the water and produce a very fine mist and not a spray.
 - a. Use equipment that allows for adjusting the rate of fogging depending on the conditions that are present.
 - b. Maintain misters at least 5 ft above the concrete surface and aimed in a direction not lower than horizontal.
 - c. Do not use fogging to apply excess water to the concrete surface to aid finishing.

- d. Do not affect the water/cement ratio of the concrete.
 - e. Discontinue fogging when a fine coating of water or sheen is visible on the concrete surface.
 - 3. Do not damage the concrete surface.
- E. Follow the hot and cold weather limitations according to Section 03055.

3.2 CURING COMPOUND APPLICATION

- A. Comply with the following when applying liquid membrane-curing compound to structural elements in bridges, box culverts, headwalls, retaining walls, concrete drainage structures, and concrete slope protection.
 - 1. Do not use curing compounds on surfaces that require a rubbed finish or on surfaces of construction joints against which new concrete will be cast, unless the Engineer gives written approval.
 - a. Completely remove the curing compound before casting new concrete against the surface when curing compound is allowed.
 - 2. Do not use curing compounds on architectural surfaces that require a concrete coating or penetrating concrete sealer and where removal will diminish the texture.
- B. Preparation
 - 1. Verify concrete surfaces are ready for curing.
 - a. Complete all patching and surface finishing before applying curing compound.
 - 2. Prepare concrete surfaces and apply curing compound according to product manufacturer's recommendations. Refer to Tables 1 and 2 for application rates.
 - 3. Keep surfaces moist until the curing compound is applied.

3.3 CURE CAST-IN-PLACE CONCRETE

- A. Cure all formed surfaces using the FIPM.
- B. Cure exposed surfaces of newly placed cast-in-place concrete according to the curing methods and curing periods in Table 1.
 - 1. Determine the concrete compressive strength using field cured cylinders cured the same as the concrete member when compressive strength is used to determine the curing period. The curing period is the specified number of consecutive days when compressive strength is not used to determine the curing period.

Table 1

Cast-in-Place Concrete Curing Requirements				
Element	Curing Methods for Exposed Surfaces ¹	Curing Period ²	Curing Compound	
			Type	Application Rate
Bridge Decks and Approach Slabs	<ul style="list-style-type: none"> LMCCM and WM 	14 days	ASTM C309, Type I D, Class A	Manufacturer's recommended rate
Closure Pours in Bridge Decks and Approach Slabs	<ul style="list-style-type: none"> LMCCM and WM 	7 days and f'c ³	ASTM C309, Type I D, Class A	Manufacturer's recommended rate
Other Bridge Elements (superstructure, substructure, and foundation elements)	<ul style="list-style-type: none"> LMCCM or WM or WCM 	0.70 f'c or 7 days ³	ASTM C309, Type I D, Class A	100 ft ² /gal
Box Culverts (including wingwalls, and aprons), Headwalls, Retaining Walls, Concrete Drainage Structures, Sign Structure Foundations	<ul style="list-style-type: none"> LMCCM or WM or WCM 	0.70 f'c or 7 days	ASTM C309, Type I D, Class A	100 ft ² /gal
Concrete barrier	<ul style="list-style-type: none"> LMCCM or WM or WCM 	0.70 f'c or 7 days	ASTM C309, Type I D, Class A or ASTM C1315, Type 1, Class A ⁴	100 ft ² /gal
Curbs, gutters, flatwork, sidewalks, driveways, concrete slope protection, and other concrete items not specified	<ul style="list-style-type: none"> LMCCM 	7 days	ASTM C309, Type I D, Class A	100 ft ² /gal

Table 1 Notes:

¹ Use FIPM for all formed surfaces. Specified curing methods apply to exposed concrete surfaces and any formed surfaces where the forms are removed before the curing period ends.

² f'_c = specified 28 day minimum compressive strength.

³ The curing period for bridge elements that use high early strength concrete may be reduced to the greater of 3 days and the time required to achieve the specified 28 day minimum compressive strength. (Refer to Section 03310 for when the use of high early strength concrete is permitted.)

⁴ Use a curing compound meeting ASTM C309 when removal is required.

C. Bridge Decks and Approach Slabs

1. Cure the exposed surfaces of newly placed concrete bridge decks and approach slabs for the specified curing period by a combination of the liquid membrane-curing compound method and the water method.
2. Apply membrane-curing compound so that no portion of the deck or approach slab is exposed to the atmosphere for more than 20 minutes after the tining or finishing operation.
 - a. Use a work bridge that follows immediately after the finishing machine to allow application of the curing compound while the concrete is still plastic.
3. Cover the entire exposed surface of bridge decks, approach slabs, curbs, and sidewalks as soon as the concrete is sufficiently set to support the materials. Refer to this Section, Article 3.1 for water method requirements.

D. Concrete Barrier

1. Broom clean the formed surfaces of the barrier after removing forms.
2. Apply curing compound to exposed concrete surfaces immediately after finishing operations are completed.

3.4 CURE PRECAST CONCRETE

A. Cure all formed surfaces using the FIPM.

B. Cure exposed surfaces of newly placed precast concrete according to the curing methods and curing periods in Table 2.

1. Determine the concrete compressive strength using field cured cylinders cured the same as the concrete member when compressive strength is used to determine the curing period. The curing period is the specified number of consecutive days when compressive strength is not used to determine the curing period.

Table 2

Precast Concrete Curing Requirements				
Element	Curing Methods for Exposed Surfaces ¹	Curing Period ²	Curing Compound	
			Type	Application Rate
Precast Concrete Deck Panels (full depth), Precast Approach Slabs, (includes parapets when cast concurrent with precast deck and approach slab panels)	<ul style="list-style-type: none"> • LMCCM and WM 	14 days	ASTM C309, Type I D, Class A	Manufacturer's recommended rate
Precast Substructure Elements, Partial Depth Precast Deck Panels (non-prestressed)	<ul style="list-style-type: none"> • WM or • SRHM 	0.7 f'c or 7 days	Not used	Not used
Prestressed Concrete Members (includes all pretensioned concrete members where pretensioning is required in the plans)	<ul style="list-style-type: none"> • SRHM or • WM or • WCM 	Specified release strength (f'ci)	Not used	Not used
Precast Noise Walls, Precast Retaining/Noise Walls, MSE Retaining Wall Panels	<ul style="list-style-type: none"> • SRHM or • WM or • WCM 	0.70 f'c or 7 days	Not used	Not used
Precast Box Culvert Structures and Precast Three-Sided Culvert Structures (wet cast and dry cast)	<ul style="list-style-type: none"> • SRHM or • WM or • WCM • LMCCM 	0.70 f'c or 7 days	ASTM C309, Type I D, Class A	100 ft ² /gal
Wet Cast Concrete Drainage Structures (such as manholes, grade rings, catch basin grade sections, pipe end sections, precast inlets and boxes)	<ul style="list-style-type: none"> • SRHM or • WM or • WCM • LMCCM 	0.50 f'c or 7 days	ASTM C309, Type I D, Class A	100 ft ² /gal
Modular Block (wet cast)	<ul style="list-style-type: none"> • WM or • WCM or • LMCCM 	0.70 f'c or 7 days	ASTM C309, Type I D, Class A	100 ft ² /gal

Table 2 (Continued)

Precast Concrete Curing Requirements				
Element	Curing Methods for Exposed Surfaces ¹	Curing Period ²	Curing Compound	
			Type	Application Rate
Concrete Barrier	<ul style="list-style-type: none"> LMCCM 	7 days and until certified according to QMP ³	ASTM C1315, Type 1, Class A	100 ft ² /gal
PCC Pavement Panels	<ul style="list-style-type: none"> LMCCM and WM 	14 days	ASTM C309, Type I D, Class A	Manufacturer's recommended rate

Table 2 Notes:

¹ Use FIPM for all formed surfaces. Specified curing methods apply to exposed concrete surfaces and any formed surfaces where the forms are removed before the curing period ends.

² f'c = specified 28 day minimum compressive strength.

³ QMP = UDOT Quality Management Plan: Precast-Prestressed Concrete Structures.

- C. Precast Concrete Deck Panels (full depth), and Precast Approach Slabs
 - 1. Refer to this Section, Article 3.3, paragraph C.

- D. Precast Concrete Barrier
 - 1. Broom clean the formed surfaces of the barrier after removing forms.
 - 2. Apply curing compound to exposed concrete surfaces immediately after finishing operations are completed.

SPECIAL PROVISION

**PROJECT #F-0248(16)3
PIN #9713**

SECTION 03392S

PENETRATING CONCRETE SEALER

Delete Section 03392 in its entirety and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Penetrating concrete sealer applied to concrete, masonry, or stone surface.

1.2 RELATED SECTIONS Not Used

1.3 REFERENCES

- A. ASTM D 3960: Volatile Organic Compound (VOC) Content of Paints and Related Coatings

1.4 DEFINITIONS Not Used

1.5 SUBMITTALS

- A. Manufacturer's product data, specifications, and recommended installation instructions.
- B. A random sample of the penetrating concrete sealer for testing at the Engineer's discretion to verify product compliance.

PART 2 PRODUCTS

2.1 PENETRATING CONCRETE SEALERS

- A. Choose from the following list:
 - 1. Silane
 - 2. Siloxane
 - 3. Silicate
 - 4. Siliconate
 - 5. Organo Silane Ester

6. Styrene Acrylic Copolymer
 7. Organo Siloxane
 8. Alkylalkoxy Siloxane
 9. Alkylalkoxy Silane
- B. Meet VOC content of 100 g/L or less. Refer to ASTM D 3960.
 - C. Can be applied to either new or existing surfaces.
 - D. Dries clear without significant change in surface appearance.
 - E. Maximum drying time of 1½ hours.
 - F. Product can be applied in horizontal, vertical and overhead surfaces.

PART 3 EXECUTION

3.1 PREPARATION

- A. Keep surfaces dry and free of release agents, laitance, dirt, dust, paint, grease, oil, rust and other contaminants.
- B. Remove any curing compound or other incompatible products from the surface of the concrete before applying penetrating sealer.
- C. Use one of the following cleaning methods:
 1. Pressure washing – 700 psi min.
 2. Shotblasting
 3. Sandblasting
 4. Etching
- D. Keep concrete surface matrix intact without exposing any large aggregate.
- E. Cure concrete for 28 days before sealer application.
- F. Obtain authorization from the Engineer before applying material.
- G. Coat only when the outside air temperature will remain between 45 and 90 degrees F for 24 hours.
- H. Do not apply penetrating concrete sealer within 24 hours of pressure washing.
- I. Do not apply penetrating concrete sealer when it has rained or is expected to rain within 24 hours.

3.2 APPLICATION

- A. Application Rate
 - 1. Apply according to manufacturer's recommendations for each of the following surfaces:
 - a. Horizontal
 - b. Vertical
 - c. Overhead
- B. Apply the penetrating concrete sealer evenly at an application rate recommended by the manufacturer.
- C. Do not apply penetrating concrete sealer to portland cement concrete pavement (PCCP) or other roadway surface.

PIN #9713**

SECTION 03934S

STRUCTURAL POTHOLE PATCHING

Delete Section 03934 in its entirety and replace with the following:

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Repair of potholes and delaminated areas on bridge decks and approach slabs.

1.2 RELATED SECTIONS

- A. Section 03055: Portland Cement Concrete
- B. Section 03211: Reinforcing Steel and Welded Wire
- C. Section 03310: Structural Concrete

1.3 REFERENCES

- A. ASTM C 928: Packaged, Dry, Rapid-Hardening Cementitious Materials for Concrete Repairs
- B. ASTM D 4285: Indicating Oil or Water in Compressed Air
- C. ASTM D 4580: Measuring Delaminations in Concrete Bridge Decks by Sounding

1.4 DEFINITIONS Not Used

1.5 SUBMITTALS

- A. Manufacturer's product data sheets and recommended installation instructions.
- B. Structural Pothole Documentation for information

1. Document the size, location, and repair material used in structural pothole repair area using the 11 x 17 inch plan sheet shown.

1.6 QUALITY CONTROL

- A. Manufacturer's Technical Representative
 1. Provide a technical representative from the structural pothole patching product manufacturer for training and consultation.
 - a. Manufacturer's technical representative must provide training in surface preparation, proper mixing, placing and finishing technique, safety precautions, traffic opening time, and environmental requirements.
 - 1) Manufacturer's technical representative must train workers who will mix, place, or finish the structural pothole patching product during production work in a pre-production meeting.
 - 2) Use a mockup to demonstrate proper mixing, placing, and finishing technique.
 - 3) Coordinate training with the Engineer.
 - b. The manufacturer's technical representative must:
 - 1) Be onsite during surface preparation and application of the structural pothole patching product on the initial structure and for the first day the structural pothole patching product is used on the project.
 - 2) Be available for consultation but not necessarily present at the job site for the remaining work.
 - 3) Be available to train workers who did not attend the pre-production training before they can perform production work.
 - c. Do not use workers for the production work who have not been trained by the manufacturer's technical representative.
 2. The Engineer may waive the requirement for the manufacturer's technical representative to be onsite if it can demonstrate that the superintendent for the work has performed at least five satisfactory applications of the structural pothole patching product on similar bridges in similar environments.
 - a. The manufacturer's technical representative must be available for consultation throughout the duration of the application.
 3. The Department reserves the right to require the manufacturer's technical representative to be onsite if at any time the Engineer is concerned with the product installation quality.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Concrete – Class AA(AE), ¾ inch maximum aggregate. Refer to Section 03055.
- B. Rapid Setting Repair Mortar – Refer to ASTM C 928.
 - 1. Type R3.
 - 2. Patch materials free of magnesium phosphate.
- C. Reinforcing Steel
 - 1. Coated reinforcing steel according to Section 03211.
- D. Water – Use potable water free from harmful salts, reactive chemicals, and other contaminants.

2.2 EQUIPMENT

- A. Jackhammer
 - 1. 30 lb class
 - 2. 15 lb class
- B. Pressure Washer
 - 1. Minimum 3000 psi and a maximum of 7000 psi

PART 3 EXECUTION

3.1 PREPARATION

- A. Locate unsound concrete in the deck and approach slabs and mark a rectangular area surrounding each pothole as shown. Refer to ASTM D 4580.
 - 1. Remove asphalt surfacing before conducting sounding survey.

3.2 CONCRETE REMOVAL

- A. Use either the jackhammer or hydro-demolition method described below.
 - 1. Jackhammer Method
 - a. Saw Cuts – Make 1 inch deep saw cuts in the sound concrete along the rectangular perimeter of the repair areas.
 - 1) Stop saw cuts and notify the Engineer if reinforcing steel is encountered.

- 2) Replace reinforcing steel that has been cut during this operation having a cut depth equal to or greater than 25 percent of the diameter of the reinforcing steel.
 - a) Provide lap lengths of the new reinforcing steel with sound existing reinforcing steel at least of 32 bar diameters.
 - b. Remove damaged, shattered, and delaminated concrete.
 - 1) Use 30 lb class jackhammer except as noted below.
 - a) Do not use pneumatic hammers heavier than 15 lb class for removals in areas directly below the top reinforcing steel.
 - c. Operate jackhammer at an angle greater than 45 degrees as measured from the element surface.
 - d. Remove the concrete to ½ inch below the bottom of top mat of reinforcing steel if the delamination occurs at the depth of the top mat of reinforcing steel.
 - e. Protect existing reinforcing steel encountered.
 - f. Replace or repair damaged reinforcing steel.
 2. Hydro-demolition Method
 - a. Obtain the most current requirements for hydro-demolition from the Department.
- B. Remove loose materials by dry sweeping or by compressed air with at least 90 psi pressure. Refer to ASTM D 4285.
- C. Deck Blow Through
1. Immediately stop the equipment and notify the Engineer and make the necessary adjustments to limit the area of complete concrete removal if removal blows completely through the bridge deck.
 2. Provide appropriate falsework and formwork to support construction loads safely.
 3. Use treated plywood to facilitate stripping.
- D. Replace existing reinforcing steel that have 25 percent or greater section loss.
1. Cut and remove deteriorated existing reinforcing steel.
 2. Match the size of the new reinforcing steel bar to the existing bar.
 3. Provide lap lengths of the new reinforcing steel with sound existing reinforcing steel at least of 32 bar diameters.
- E. Keep the repair area clean until new concrete has been placed.

3.3 BONDING CONCRETE

- A. Follow manufacturer's recommendations when using rapid setting repair mortar.

3.4 PATCHING CONCRETE

- A. Sandblast clean the exposed reinforcing steel and concrete surfaces before placing the structural pothole patch.
 - 1. Protect in place any sound reinforcing steel.
 - 2. Re-sandblast reinforcing steel if rust occurs before placement.
- B. Clean the repair area by blowing with clean and dry compressed air at 90 psi. Refer to ASTM D 4285.
- C. Pressure wash the repair area.
 - 1. Remove standing water while maintaining a saturated surface.
 - 2. Repeat pressure washing of the repair area before placing the structural pothole patch if the repair surface shows signs of drying out.
- D. Repairs using concrete
 - 1. Place concrete and strike off level with deck surface. Refer to Section 03310.
 - 2. Finish surface of bridge deck and approach slab according to Section 03310.
 - 3. Apply a liquid membrane-curing compound and wet cure the repair area for at least 7 days and until the concrete repair has a compressive strength of at least 3500 psi.
- E. Repairs using rapid setting repair mortar
 - 1. Follow the manufacturer's requirements for placing, finishing, and curing if using rapid setting repair mortar.
 - 2. Use a texture process that produces regular $\frac{1}{8}$ inch wide transverse grooves spaced randomly from $\frac{1}{2}$ inch to $\frac{3}{4}$ inch on centers and $\frac{1}{8}$ inch deep.
 - 3. Do not allow vehicles on the repair mortar until the mortar reaches a strength of 3500 psi.
- F. Patch failure – Remove the patch completely and repair the pothole again if the patch fails to bond to the existing concrete.

3.5 PROTECTION

- A. Prevent debris from falling into waterways, pedestrian areas, traffic areas, or onto railroad tracks.

2012 Standard Specification Book**

SECTION 06055M

TIMBER AND TIMBER TREATMENT

Delete Article 1.3 and replace with the following:

1.3 REFERENCES

- A. AASHTO M 133: Preservatives and Pressure Treatment Processes for Timber
- B. AASHTO M 168: Wood Products
- C. AASHTO LRFD Bridge Requirements
- D. Southern Pine Inspection Bureau (SPIB) Standard Grading Rules
- E. Western Wood Products Association (WWPA) Standard Grading Rules

Delete Article 2.3 and replace with the following:

2.3 TREATMENT

- A. Meet requirements of AASHTO LRFD Bridge Requirements.
- B. Meet requirements of AASHTO M 133.

**Supplemental Specification
2012 Standard Specification Book**

SECTION 13554M

POLYMER CONCRETE JUNCTION BOX

Add Article 2.1, paragraph D:

- D. Hand-mix grout
 - 1. Minimum strength – 50 psi
 - 2. Maximum strength – 150 psi
 - 3. Slump – 5 inches to 10 inches

Delete Article 2.2, paragraph B and replace with the following:

- B. Furnish boxes, rings, and lids that meet all the requirements of ANSI/SCTE 77, including Tier 22 loading.

Delete Article 2.2, paragraph D4 and replace with the following:

- 4. “UDOT Fiber Optics” when the junction box contains fiber optic cable or future use multi duct conduit.

Delete Article 2.3, paragraph A and replace with the following:

- A. Furnish and install Utility Marker Posts for each junction box location. Refer to AT Series Standard Drawings.

Delete Article 3.2, paragraph B2 and B3 and replace with the following:

- 2. Seal conduit and microduct ends inside all junction boxes with at least 2 inch thick duct seal after cables are installed.
- 3. Seal vacant conduit and microducts with a manufactured conduit plug and attach detectable pull tape where applicable. Refer to Section 13553.

Delete Article 3.2, paragraph F2 and replace with the following:

2. Extend PVC conduit 2 inches, HDPE conduit 6 inches, microduct overshooth 6 inches and individual microducts 2 ft beyond the inside wall of the junction box.

Delete Article 3.2, paragraph J and replace with the following:

- J. Encase all conduit in flowable fill or approved hand-mix grout where the conduit enters the junction box.
